NEWS IN BRIEF

Takeover of Dictaphone

ANOTHER giant firm in the office systems business is being formed by the takeover of Dictaphone Corp by Pitney-Bowes, the maker of postage meters and office machines. Pitney-Bowes is to pay \$120.4 million for the dictating machine company, producing a combined concern with an annual turnover of approaching \$1 billion.

ICL pay rise

WITH pre-tax profits of £37.5 million (CW, December 21/28) overall payments of 10.9% on basic rates have been paid to ICL employees who, according to the company, qualify under the terms of last year's self-financing productivity scheme. ICL's financial year ended in September and the final quarter bonus was 2.6%.

Bankrupt

THE Norwegian state-owned Tandberg consumer electronics, instruments and computer peripherals company has been declared bankrupt, but it is hoped that parts of the company will continue in business. The Norwegian government withdrew an offer of £5 million additional support when it learned that substantially more money would be needed to avoid bankruptcy.

Surprise entries in software Honour Roll

A LARGE number of old favourites have been joined by some surprising new entries in Datapro's 1978 software Honour Roll, the US user survey.

Compiled this year from nearly 8,000 user responses, the annual Datapro software survey reported on 260 packages. Of these, just 30 met the stringent requirements for inclusion in the Honour Roll.

Last year, 32 products were recognised. Ten of these have been dropped this year, leaving a core of 22 with at least two consecutive years in the Roll.

Five of the packages have now been included in all of the six years that the list has been published. These include ADR's The Librarian, Pausophic's Panvalet, SDI's EPAT and the Disk Utility System from Westinghouse.

Two programs, Fmt/Dump/Restore from Innovation Data Processing, and Syncsort from Whitlow Computer Systems have now

appeared in five consecutive years.

And three products featured for four consecutive years include Westinghouse's West and Computer Associates' CA-Sort, though the latter first appeared in the Honour Roll under the name PanSort when the US licence was held by Pansophic.

Traditionally dominated by utility software, the 1978 Honour Roll is notable for the growing place taken by much larger software systems. The list includes two DOS-replacement operating systems, two TP monitors, and three DBMSs.

Packages appearing under these categories for the second or subsequent time were EDOS from the Computer Software Company (2nd year), West, Cullins' IDMS (3rd year), and Software AG's Adabas (2nd year).

New entrants in these categories include Allerg's Shadow II (the first UK-developed product on the Roll) and Hewlett-Packard's

Image/3000 database for the 3000 series. Packages appearing in the Honour Roll for the first time include Univac's BEM (an interactive Basic Editor Monitor for OS/3), and Goal System's Fags partition balancer for DOS/VS, IBM's 360/370 RPG compiler.

While Westinghouse is only one of several firms to have two products in the Roll, its UK operation, Westinghouse Management Systems, has the distinction of being agents for six of the Honour Roll packages. In addition to the Westinghouse products West and Disk Utility System, the company handles Flee/Film and Fags, both developed by Goal Systems, Innovation's FDR, and Quik-Job developed by Systems Support Software Inc.

Most surprising omission from the 1978 Honour Roll is SDI's Grasp, which had previously been one of the elite packages featured every year since the Roll's inception.

Bristol gets Inmos research centre

AFTER some weeks of uncertainty Inmos, the National Enterprise Board's microelectronics subsidiary, has confirmed that its research centre is to be in Bristol (CW, December 21/28, 1978). It is also intended to set up four production units at one or more locations in the UK.

Professor Iann Barron, UK director of Inmos, said that a decision on the location of these plants would be based on data gathered by a study being carried out by management consultants PA International.

A questionnaire has already been sent to all regional development authorities in the UK, all county authorities in assisted areas, and all other local authorities that had shown interest in getting Inmos to set up operations in their areas.

Professor Barron said the questionnaire would also be sent to any authority that applied and it was hoped that they would all be returned before the end of February. After evaluation a further study may be needed, said Barron, and it was unlikely that any decision on the location of the first plant would be made before the middle of 1979.

The plan for the US semiconductor manufacturer, Mostek, to set up a European operation (CW, December 14, 1978) is also moving forward and chairman Joe Sevin says the choice now lies between Scotland and the Republic of Ireland.

Briefing Mini system from STSC

A PACKAGED minicomputer system based on the Magnesium M80 is to be marketed by Scientific Time Sharing Corp. To be known as the Quad 100, the system will run STSC's proprietary APL/Plus software under the control of IBM's OS/MVT operating system.

It will be capable of operating both as a stand-alone system and as an extension to the time-sharing service, and will be available in two models with power exceeding an IBM 370/138 and 148 respectively. First deliveries are expected within the next three months, according to the firm's UK operation, APL/Plus Ltd.

Dictaphone sued

A SHAREHOLDER of Dictaphone Corporation is suing the firm and Pitney-Bowes over the proposed takeover of the dictating machine maker (CW, January 4). Betty Bader, of Brookfield Centre, Connecticut, claims that the alleged terms for the takeover are "unfair and inequitable".

Consortium

INCORPORATION of the National Enterprise Board's office systems consortium (CW, October 12, 1978) is expected within two weeks. The board says it will be announcing the names of the firms involved "shortly". They are expected to include Logica and CTL among others.

Pet winner

WINNER of the Livingston Hire competition at the Compec exhibition, to find a slogan to promote microprocessors in industry, is D. J. Martin, a design engineer with Grundy and Partners, of Stonehouse, Gloucestershire. Martin, who wins a Commodore Pet for his creative efforts, succeeded with the saying "Products sell when they think as well".

Peers is back

AFTER standing down as chief operating officer of Logical Machine Corp during a period of illness (CW, September 14, 1978), John Peers has assumed that role again and Jerry Brandt, who took over from Peers, has left the company. Peers said that Logical is running profitably again and is close to signing a UK distributor.

United Leasing Ltd

IN an article published in last week's issue of Computer Weekly on the subject of computer leasing, the headline could have given the impression that one of the most well known third party computer leasing companies, United Leasing, is immediately withdrawing from the computer leasing business. This is not a true and accurate reflection of United Leasing's current situation, as can be gathered from the article. However, our article should have

ICL chairman Tom Hudson to retire

IN the ICL annual report, mailed to shareholders last week, chairman Tom Hudson makes the surprise announcement that he plans to retire during 1979.

"My 65th birthday occurs in a little over 12 months from now, and I expect before that anniversary to retire and hand over to someone else," he writes.

Hudson joined IBM (UK) in its infancy in 1951 — when it had a staff of three — as sales manager. Three years later he became managing director, and when he departed, 11 years after that, the company had grown to a thriving 6,000-strong organisation. He

joined the Plessey board in 1967, and became the Plessey representative on the ICL board on the company's formation in 1968. In 1972 he became chairman of ICL (CW, March 2, 1972), and was responsible for the appointment of Geoff Cross as managing director later that year.

Coupled with Cross' sudden resignation in November 1977, Hudson's departure from ICL will mark the end of an era for the company — the end of the period in which the company transformed itself from what was widely regarded as the loneliest of lame ducks into a multinational corporation

doing more than half its annual billion dollars of business outside the UK, and one given as good a chance of survival in the cut-throat miniframe business as any of its US competitors bar IBM.

In his message to shareholders, Hudson describes his experience with ICL as "a most exciting and stimulating one."

"I am proud," he adds "to have been associated over those years with very many excellent men and women who have served ICL so well."

The process of finding a successor has begun.

Indian college wants DAP

DISCUSSIONS are under way which could lead to the respected Administrative Staff College of India, ASCI, becoming one of the first customers for ICL's Distributed Array Processor.

Dr Upal Banerjee, head of the computer department at the college, is on a whistle-stop tour of European capitals, and when he visited London at the end of December, he had lengthy talks with ICL, the Ministry of Overseas Development and the British Council.

"It is all at a very early stage and nothing has been agreed as yet, but we are hoping to get a grant from the UK Overseas Development Ministry which would allow us to have an ICL 2976 as a front-end to the DAP. The total sum involved would be £2 million, £1.85 million for the hardware, £200,000 worth of spare parts, £100,000 worth of software, and training, plus educational packages and the Filetab data management package."

As a new and unique product, the DAP is as yet unborn of software, and among matters discussed with ICL was the possibility of ASCI writing Fortran software for the DAP. Dr Banerjee is thinking of putting five analysts on the project, and producing £12,000-worth of software.

GTE the favourite for US Prestel system

AGREEMENT with one or more US companies seeking rights to the Post Office's Prestel videodata system only awaits formal signing of the Post Office-Innac contract giving the latter exclusive US marketing rights.

Although ITT and RCA are possible contenders, front runner is GTE, the telecommunications giant currently seeking FCC approval to acquire

packet-net operator Telanet. GTE has revealed plans to test-market a business videodata system, but has not acknowledged talks with Innac. The burst nature of videodata traffic makes a packet network the

ideal vehicle, and Telanet plus videodata would be a powerful combination. Innac managing director John Pearce expects agreement with one or more US companies "within two months."

INSIDE THIS WEEK'S CW

The fight for the business market is a tough one and there is now a wide variety of systems challenging for a share. In this month's Marketview, Fred Leonard surveys the equipment on offer and outlines the advantages and pitfalls that can benefit or baffle the user (page 20). George Cogger offers an original solution to the language problem (page 21). The fashion for distributed processing continues unabated and Mario Edwards looks at some of the questions that have to be taken to ensure the efficient handling of a company's data resources (page 23). These articles and the usual round-up of news from all over the world are featured in this month's special feature (pages 17-24).

THE FOUNDATION In the first of a new monthly series from the Butler Cox Research Foundation, David Butler examines the changing role of corporate management services (page 14).

ALSO Computer law — Beware of pit in the sky (page 15). Role of the PR person (page 16). The Private View (page 17). Software File (page 18). Of Spot (page 19). Micro View (page 20).

Siemens works on 16-bit single chip micro

A 16-bit single-chip microcomputer is under development by Siemens in West Germany, with a projected launch date of early 1980.

Siemens is also negotiating with Advanced Micro Devices (AMD) with which it owns the joint venture company Advanced Micro Computers (AMC), over the choice of another 16-bit microprocessor. Siemens has been closely working with Intel, with the 8080 and 8085 processors, and will be offering support for Intel's soon-to-be launched 8088.

AMD, however, is now working with Zilog on the development of the latter's Z8000 16-bit processor, and its peripheral devices. So it seems possible that while supporting the Intel-based Siemens could second source the Zilog Z8000 as part of its commitment to AMD.

Though details are as yet scant, Siemens' own development will include a measure of on-chip ROM, and possibly RAM and I/O capability as well.

Takeover

SYSTEMS software products supplier Tuncley Systems Inc is being taken over by the big US based timesharing bureau, National CSS. Best known for its Taskmaster teleprocessing monitor for IBM machines, TSI is likely to become a largely autonomous software products division of NCSS. Headquartered at Norwalk, Connecticut, TSI has a subsidiary in London and is now opening offices in France and West Germany.

Such a friendly robot

Last Saturday, leggy and like the New Avengers star Joanna Lumley presented a small and partly Autogun the robot to 12-year-old Fiona Muechy of Rickmansworth, who won the Autogun "My Friendly Computer" competition, at the BCS 76 Young Computing Fair. In her picture, Fiona, holding her winning entry, is seen with Joanna and Autogun, which includes a radio/digital clock and tape recorder/cassette. The Fair was an overwhelming success with almost 5,000, including 3,825 children, crowding the Bloomsbury Centre Hotel where it was held. The Fair was part of the BCS specialist group event (see page 2, 3, 7).

Police computer security probe

POLICE investigations are taking place into an alleged breach of security at the Police National Computer Centre in Hendon.

In Nottinghamshire, the investigation is looking into the alleged breach of PNC information security by a police sergeant on the force there, who is now suspended pending the results of the investigation.

It is alleged that the sergeant supplied vehicle ownership information from the PNC to unauthorised individuals who attempted to use it for commercial advantage, and that these individuals were private detectives employed by Ladbrokes, the casino division of Ladbroke's.

Such information could have been gained via the Force Control communications centre in

Nottingham or by simply phoning or radioing in an enquiry to the PNC centre.

You can tell a computer system by the companies it keeps

As a test of the efficiency of our word processing and distributed data collection systems, and the strength of our nationwide customer engineering and software support, take a look at our client list.

Names like Barclaycard, Central Computer Agency, HCC, Trust, Shell, Pirelli, CEB, Canbury Schweppes, Trustees Savings Bank, Pirelli, British Steel and lots more.

Obviously, we're doing something right. And now with our complementary association with The Telex Corporation, our research and development programme will be expanded even further. Contact us for further information on Data Text and Systems 2100/211 and join the companies we keep.

Home entertainment of future

DESPITE US forecasts that companies like Texas Instruments and IBM may beat traditional TV manufacturers to the potentially enormous market for integrated home information systems (CW, October 12, 1978), UK TV manufacturer Thorn does not intend to let the market slip away. The company, which is considering taking a stake in the US microelectronics industry (CW, December 21/28, 1978), has assembled a mock-up of the home entertainment centre of the future, incorporating flat-screen TV, videodata, audio and video recorders, computer terminal, floppy disc unit and multiple CRT monitors.

"We are looking at thin-film disc heads using semiconductor techniques, with a much smaller gap between the head and the disc surface. Drives with multiple arms and multiple heads on one arm are also likely," he said. "The amount of information stored could also be increased by the use of better disc heads using semiconductor techniques, with a much smaller gap between the head and the disc surface. Drives with multiple arms and multiple heads on one arm are also likely," he said. "The amount of information stored could also be increased by the use of better disc heads using semiconductor techniques, with a much smaller gap between the head and the disc surface. Drives with multiple arms and multiple heads on one arm are also likely," he said.

Beware of pi in the sky worship

IN a brilliant speech that sparkled with a clarity of thought and sharpness of wit that is rare on the computer punditry scene, Murray Laver last week got the BCS annual lecture series off to a great start (see page 3).

Under the title "The significance of computing", Laver ranged across a wide spectrum of systems and social impact-of-computers issues. And he highlighted one particularly important aspect that is seldom mentioned, the worship of numbers, which he called "the pernicious heresy, numerology".

Laver rightly explained that computing tends to give a false importance to numerical facts. "This not only widens the gap between the numerate and the majority," he added, "but has encouraged some of the semi-numerate to espouse numerology, the idolatrous worship of numbers; an unwholesome version of pi (sic) in the sky."

Numerology, he continued, is spawned by the common confusion between precision, accuracy and significance. As a male chauvinistic example he said, "A lady may inform you with impressive precision that her age is 29½ but experience suggests an accuracy of five or take five years. And if the inaccuracy is around ten years, it is not significant anyway."

In this case, as Laver stressed, the convention is understood and no social problem arises. However, he added, "each day the mass media report commercial and economic facts, such as trade figures, whose probable errors span at least the last digit or two of their quoted value and whose significance may be low, if not zero. The media then proceed to analyse the transient and meaningless fluctuations of these figures with great solemnity."

"That these quantities often emerge from expensive computers lends their specious precision an air of authority and

significance in no way justified by the accuracy of the primary data."

Laver then prescribed three remedies for any who suffer the odd twinges of numerology, and Computerview commends them to our more susceptible readers.

The first Laver remedy is to "report on rising, and after meals, the formula: 'Remember Man Friday'. This serves to remind the patient that the only numbers to be found in nature or human phenomena were left there by some man, who has often put his foot in it. Quantitative facts are not the most important, only the easiest to calculate with."

The second remedy is "to distrust any numerical fact that appears in public without an accompanying statement of its probable error: this copes with chronic dislocations between precision and accuracy and can be particularly efficacious when applied to the monthly trade figures."

Laver's third nostrum is "to consider what action you feel obliged to take when the extreme right-hand digit of some statistics change by plus or minus 1 and then successively cut off right-hand digits until the action becomes important". This, claims Laver, can be a "sovereign remedy for inflated significance and can be applied daily to the Stock Exchange share index."

FOCUS

DPM's future indefinite

IT did not require posters, wall or otherwise, to proclaim last week's message that "the future for DPM management was bleak". Writing on the installation walls strongly suggested that the demise of the DPM was imminent and possibly long overdue.

In the past, the DPM has staved off many marauding aggressors. The company accountant or secretary were early plunderers as were keen computer salesmen. Consultants then had a go at usurping the DPM's role, closely followed by facilities management and turnkey operators. Also to be found beating on the installation door were large-scale service bureaux and software houses. Each and every assailant presented a competitive and persistent challenge.

This year, it could well be the year of the user. Minis and micros are now becoming standard features of many user departments, with software packages being available "off-the-shelf". In many other areas, computer systems are being distributed far and wide - at least as far as the Post Office modem will permit.

The gloom and doom theme was further hammered home at a recent DPM Central London branch meeting. The guest speaker was Alan King, management services manager of Lyons Maid, a noted knacker.

How to build on success of BCS 79

HINCHLEY... breaking down the barricades of fear. See "How to build on success."

SATURDAY, January 6, is likely to go down in UK computing history as a turning point in the relationship between the computing community and the rest of society, as well as being a milestone in the development of the British Computer Society which, hopefully, indicates the start of a new, outgoing and vigorous phase in the Society's growth.

For, last Saturday, the BCS 79 Young Computing Fun Fair opened its doors to the wide-eyed, eager enthusiasm of the young, who came in their thousands to learn about, play with and understand the new technology that will be such a vital part of their futures.

There were laughter and balloons, funny hats, eager fingers and, above all, questions, questions, questions. In the eyes and minds of the young, there was none of the fear and the doubts about computing that cloud the vision of those who have grown up ignorant of the new technology and therefore apprehensive about the unknown.

Even though there was a great deal of fun and games, many of the children said that the most interesting things were the lectures, and there was great interest in the careers in computing talks and literature.

The whole UK computing community is indebted to the BCS 79 organising committee, under the chairmanship of Andrew Hinchley, and the Fun Fair

claim that only management services can originate change, initiate improvement and mind-mind implementation.

Not so long ago Ron Yearsley, director of BIS, wrote (CW, October 19, 1978) that in his view, the DPM was dinosaur shaped and his days were very definitely numbered. This particular count-down, it seems, was well advanced with many industry commentators confidently avowing the final knock-out blow.

Whether 1979 will see the DPM down and out is, one hopes, doubtful. Computer suppliers are forecasting a bumper sales year, and vacancies - if the back pages of CW are any guide - are at an all-time high in the computer industry.

1984 and all that

COMPUTERS and "silicone" chips are the latest fashionable talking point for pundits, public figures, national and provincial Press and broadcasting and the talk is often very silly indeed. Contributions from readers are welcome - we will pay £5 for each howler that we print.

Computers now spend more time on the phone each day than any human telephone addict - deciding such vital questions as

LORD PEART TELLS OF REAL CHALLENGE FROM INFORMATION TECHNOLOGY

Non-use is greatest threat, BCS 79 told

THE failure to use information technology to increase the UK's economic and industrial competitiveness poses a far greater threat to employment than the possible increase in unemployment caused by use of the technology, according to the Lord Privy Seal, Lord Peart, and Duncan Davies, the chief scientist and engineer in the Department of Industry.

This view, expressed during the BCS 79 opening day, characterised the cautiously optimistic tone which pervaded the BCS 79 talks and discussions on the impact of information technology in general and microelectronics in particular.

And in his BCS lecture (see page 2 and right) Murray Laver concluded: "Our generally negative public attitude to computing suggests that we have lost our nerve."

"We need to recover the verve of the Victorians without their brushiness and, in the immortal words of Star Trek, 'To boldly go where no man has gone before,' namely to the future."

In the keynote speech which opened the conference, Lord Peart, said that, although fears had been expressed that the new technology would simply create unemployment, the government now accepted the "far calmer, but not complacent view" of its Central Policy Review Staff "Think Tank" report (CW, December 14).

"The major factor affecting employment," Lord Peart said, "will be our competitiveness in supplying products incorporating the new technology. If we adopt this technology as fast as, and preferably faster than, our international competitors, the number of jobs created will outweigh any job losses from increased efficiency."

"The one sure recipe for rising unemployment will be to respond too slowly." However, he accepted that "there will be transitional difficulties in adapting to the new technology. Some jobs will disappear, perhaps faster than can be dealt with by natural wastage. Some skills will be replaced

CW Editor Malcolm Peltz with a group of students.

'Software is troublesome stuff' - Laver

THE "troublesome stuff that is software" and the "primitiveness of systems analysis techniques" were emphasised during BCS 79 as potential brakes on the advance of information technology.

The Department of Industry's chief scientist, Duncan Davies, said that, although the low cost and flexibility of the micro had removed some of the "technical limits" to the increased use of information technology, they would also "expose" the primitiveness of available systems engineering techniques when micros are introduced into control systems more complex than calculators.

And in the first BCS annual lecture, Murray Laver, former member of the Post Office Board and, in retirement, a visiting professor at Newcastle University, said, "Should a computer fail to please, it is worth recalling that its programmers have had the major effect on the quality of service it can give."

However, he said, "Software is troublesome stuff. It is almost intrinsically pure labour, and wage costs continue to rise."

VALUABLE

electronic equipment

M-OV gas-filled surge arresters have a well established role in protecting telecommunication equipment where they are second to none.

But when lightning strikes, or other surges of electricity take place, any kind of electronic equipment which is connected by wires or lines can be in serious and costly trouble.

Equipment such as airfield landing aids, hydro-telemetry schemes, road and railway signals, etc.

It is here that M-OV come to your aid.

By designing-in M-OV surge arresters that could be as small as 12mm, you can protect your equipment

'Plan' now for leisure'

"If work was a good thing, the rich would have found ways of keeping it to themselves," was a Hattian proverb quoted by ASYMS research director Sirie Sherman during the BCS 79 session examining future options opened up to society by information technology.

Sherman used the proverb to illustrate his thesis that the

Intel boss on why UK could face brain drain

THE acknowledged skill of British software and applications experts, coupled with the generally low level of reward and status attributed to these people in the UK, could well lead to a new and potentially damaging "brain drain", according to Howard Kornstein, of Intel UK.

This was spelled out at the session on the UK's role in microelectronics at BCS 79. Kornstein was outlining several areas in which the UK could participate constructively in the future development and application of microelectronics.

chip manufacture, with the attendant high risk to the capital involved, to the manufacture of the products that make use of the technology. An integral part of this latter area, according to Kornstein, is the UK's skill in providing software and systems design services.

He pointed to West Germany as a major headhunter of UK brain power, emphasising several inter-related factors. These included the superior status and salary earned by engineers in that country, the potential demand for the products they could produce, and the even greater lack of indigenous skills than in the UK.

'Great' say students

"WE think it's great - particularly the careers lectures." That was the verdict on the BCS 79 Young Computing Fun Fair by a group of students (left) from Emmbrook school in Woking, when asked by Computer Weekly editor Malcolm Peltz (right) for their reaction to the first ever computing event designed specifically for children.

The 3,820 other young people who thronged the event seemed to generally agree with the view that the serious lectures on computers and computer careers made the visit particularly worthwhile.

The Fun Fair exhibition included "high street" stands designed to display the use of computers in everyday situations, ranging from an estate agent to a toy and hobby shop. In a far-sighted and adventurous public relations exercise, the police put on a demonstration every half-hour to show how the Police National Computer system operates in assisting the police force.

Profoundly Intelligent

Soothsaying Teddy Bears

OUR Artificial Intelligence guru, Professor Donald Michie, has just returned from the US with news of the latest application there of microprocessor technology — the Executive Teddy Bear. This provides flattery on demand, by means of a voice synthesiser.

The harassed executive presses its belly button and out comes a random selection of soothing phrases from its digital memory. "You're wonderful... You're the Tops... Steve McQueen was on..."

Apparently the technology is so advanced now that one or two thousand phrases can be stored easily.

Leading on from this, Michie is certain that the next development in micro-controlled consumer products is going to be in sex. Now that we've had computer games, he says, we must start seeing the

"We've made this one more human — it's got B.O.I."

Serpentine logic

A READER has sent me this rather sad story:

A Russian friend has spent many years in this country but still finds the language difficult. He also makes the study of computers his hobby and prides himself on the speed with which he can solve problems.

Last year he took his sons to the Schoolboys Exhibition, where they saw a computer on display. "Solve a problem in less than 80 seconds and win a Pet," said the notice on the stand.

Thinking how wonderful it would be to own a Pet computer, Ivan set to work and solved the problem in less than 80 seconds, a record for the day. "Right, now which pet would you like — a canary or a grass snake?" asked the demonstrator.

"It would have cost me at least £3 to house the canary properly," said our friend later. "I did the only thing possible, chose the grass snake and raffed it."

MIND GAMES

The world's largest range of over 3,000 games and puzzles — a fascinating selection in which skill, aptitude, mathematics and logical deduction all play a part. Role-playing fantasy games. War games of all ages. Abstract games. Books and Magazines.

Write for FREE Catalogue to Games Centre (CW) 10, 15 Hanway Street, London W1 (01-438 8278). Also at 2 Cavendish Street, Kensington-Thames (01-548 8446). Personal shoppers will come to both branches or order by post from W1 Centre.

The role of the PR profession

Neither liars nor censors

IT was a bitterly cold autumn night. The witching hour was approaching, and my last meal was a distant memory. I was standing with a group of other similarly cold and starving journalists outside a shut and deserted Venice airport, waiting for the river taxi which the public relations man had promised was on its way.

It took about an hour for the taxi to arrive. At the end of that time, morale was very low indeed; feelings about the poor individual responsible for the delay were correspondingly running very high.

It would have taken a very brave or a very stupid man to have canvassed the assembled multitude for an opinion of the Public Relations profession.

The moral of this story is that one should never ask a journalist for a considered opinion of PR people. Flak is likely to fly. One intrepid PR man has, however, asked me to do just that, and my editor thinks it a good idea.

So I'm going to make the attempt.

For the purpose of this article, I shall restrict discussion of the PR executive's role to the question of Press relations. Much of what I shall say nonetheless applies to public relations in general.

What does the PR function involve? For many, PR conjures up a vision of some kind of drunken lout (no sex discrimination intended; I just can't think of a suitable female alternative to lout) whose lot in life is to tell lies about the organisation he represents.

For others, perhaps prospective employers of PR expertise, the view is of somebody who — by exercise of charm, willpower and if necessary some form of direct or indirect bribery — will exert tight control over what the Press says about the organisation in question.

Both points of view are gross distortions. The PR profession has an important role, in which dishonesty and corruption seldom play a part. A good PR person performs a valuable service for his organisation, for the Press, and for the community in which he works in general.

That may sound like a piece of PR in itself. In fact it is not; I have never been a PR man, and have no idea what the Institute of Public Relations has to say about the profession it represents. What I have to say derives solely from my experience as a journalist.

PR should properly be regarded as a sales support activity. PR executives require much the same quality as sales executives, but whereas the salesman is selling to individual customers, the PR man does so to the world at large.

For any company, it is no use having the best product in the world if nobody knows about it. Salesmen can, of course, be employed to spread the word, but they are restricted to doing so to one person at a time. And in today's highly competitive business environment, that just is not good enough.

The PR man makes sure that the message does get across. He acts as the official voice of the company in telling the Press that the product has been launched and in defining its capabilities, qualities and virtues. He helps to ensure that journalists covering the launch get all the information they want, and puts them in touch with the various technical

experts within his organisation.

There are two common ways of doing this. One is the Press release — that is, an announcement by post. For most products this is the most effective method. But for some which are of more than usual interest, a Press conference is arranged. This is much more expensive, and from a journalist's point of view much more time-consuming, but if the product is particularly technically innovative, or represents an important advance for a large number of computer users, then the extra investment can be well worthwhile.

Over a period, a PR person will build up a relationship of trust with the editors and journalists on the various relevant publications. The ability to do this is an important part of his expertise.

The element of trust is crucial: the PR man has to know to whom he can reveal information in confidence, and the journalist has to know how much weight he can place on what he has

By Nicholas Enticknap

Drunken liars or charming controllers of the media? Public relations people are neither, explains NICHOLAS ENTICKNAP, who examines the true role of the PR profession in serving the public, the communications industry and the companies represented.

The computer industry is so dominated by rapid technological advance that new products form a large proportion of the news that most computer users need to know. But the PR person's responsibilities are not just confined to promoting new products.

He is concerned in the widest sense with informing the world all about his company and what it does. This includes news of other company activities, such as plans for building new factories, financial results, and changes of personnel.

To do this effectively, he must be well acquainted with all the media which might be interested in his organisation or its products. Every reader will know that each national newspaper is different; they appeal to different readerships, concentrate on different subjects, and write their stories in different ways.

The same applies to the trade Press. Computer Weekly is different from Computing, both in the topics it covers and in the way it covers them. The two papers have different editorial policies, despite the fact that they are appealing largely to the same readership.

And this is not merely of academic interest. Most readers will be unaware of the thinking which underlies editorial policy, but they will be affected by it nonetheless. They will find they prefer one paper to the other, find one of them very informative and the other a good read on the train.

If one looks at the monthly publications, the differences are even greater. Data Processing and Systems, for example, differ not just in content and style, but in the readership they are appealing to, as well.

All this information is essential to a Press officer. If he has a news story of interest, or an article for publication, it may well be most suited to one particular publication. With some news stories, it can be more desirable to achieve a lot of coverage in one publication, and none in the others, rather than a brief mention in perhaps three of four of them.

With articles, the more appropriate they are to be read and appreciated. Specialist knowledge can therefore greatly improve both the quantity and the quality of coverage an organisation gets.

Over a period, a PR person will build up a relationship of trust with the editors and journalists on the various relevant publications. The ability to do this is an important part of his expertise.

The element of trust is crucial: the PR man has to know to whom he can reveal information in confidence, and the journalist has to know how much weight he can place on what he has

MBE for man who pioneered training of blind programmers

BEHIND the announcement of the New Year's Honours award of the MBE to Geoffrey Bull, of SP Oil, lies a considerable story of work for the community and for his colleagues. Geoff, who has been blind from an early age, joined Shell-Mex BP, as it was then, in 1957 after taking part in the first course to train blind people to be programmers (CW, March 23, 1977). He joined the company, which was the marketing operation for Shell and BP, at its Hemel Hempstead Computer and Accounting Centre, and when the organisation was split up he remained with SP Oil.

Geoff has been a project leader for some time and is now part of a team working on the development of a management information system. He is also a staff representative on the company's pension fund consultative council and on the board of BP Oil Trustees Ltd, which administers the fund.

A member of the executive council of the Royal National Institute for the Blind, Geoff is a keen sportsman and has taken a leading part in developing sporting facilities for the blind and disabled. He is also on the executive council of the British Sports Association for the Disabled and last year was chairman of the British Association for Sports and Recreational Activities for the blind.

Shell-Mex was one of the first companies to take part in the scheme to train and provide jobs for blind programmers and at Hemel Geoff has two blind colleagues, Gerald Alner, who was with him on the first course, and John Farley. They are both senior programmers.

GCS to market Quantel in the UK

BACKED up by a large and well established maintenance force located all over the country, General Computer Systems has introduced the Quantel family of small business computers to the UK market. Built by the Quantel Corp of Hayward, California, more than 2,000 of the systems have been sold over the last four years, mainly in the US.

The Quantel family consists of three ranges of modular systems, the 200, 300 and 400 series, which are compatible in both hardware and software terms. The smallest 200 machine comes with a 48K byte processor and 1.3 million characters of floppy disc storage, while the biggest 400 system can have a one Megabyte main memory, 800 Megabytes of disc storage and up to 64 display terminals.

In the software side, products available with all the Quantel systems include Qbasic which is described as an English derivative, high-level language specially designed to permit easy development of complex interactive business applications.

Qbasic is supported by Program Generator which can automatically generate Qbasic coding from definitions of the system design.

There is also a package called Report generator for interactive inquiry and report printing and a range of applications packages, called Solutions, developed jointly by Quantel and GCS in the UK for jobs like order processing, inventory control and accounting.

The interactive operating system provided with all Quantel models is called BEST, Business Executive System for Time-sharing.

GCS is the UK subsidiary of the Dallas, Texas based firm which is now part of the Telex Corp. GCS is best known as the manufacturer of the 2100 series of key-to-disc systems but is now active in the shared processor test editing market with its Dataquest systems.

GCS kit used to be sold in the UK by Intersec, and a large number of Intersec staff joined GCS UK when it was set up after

Taking on the Russians

A BRAVE man is Peter Ellis, deputy managing director of ICL, as he takes on Russian Grandmaster Evgeny Yevseyevich at the opening ceremony of the 54th Hastings International Chess Congress. ICL is sponsoring the congress, which had run into financial difficulties.

Our picture shows Ellis seated on the left. Looking on in the background are another Russian Grandmaster, Alexander Koshlyakov (left) and Rita Morry, chief controller of the tournament.

Ellis said of ICL's involvement, "Our interest stems from the fact that chess demands the same skills and logical thought that are required in many aspects of our computer business."

Indian college wants DAP

From front page

gave me another Rs 5 million contract.

"They want us to write some management games, and also a chess and a noughts and crosses program; ICL and IBM have these, and so they feel that they have to have them too."

"There is Rs 1.1 million still outstanding on the original contract, and they wanted us to take another computer; however they have agreed to pay the balance in cash."

"We need modern hardware such as the 2876, because we're moving on to database, real time and communications applications. We do not want another Russian computer, although we may exchange our 1030 for the new virtual 1033, which is somewhere between a 370/125 and 135 in power. But our medium-term aim is to get a modern Western machine."

During his talks, which also took in the National Computing Centre in Manchester, Dr Bhatnagar also discussed student exchanges of between three and six months.

"The British students would get experience of working on real Third World projects such as our GURU General Education and Utility Education Resource Unit; a travelling school for adult education in things like the use of fertilisers and pesticides. And our students would benefit from a spell working at the frontiers of knowledge."

Chinese place \$69 million contract for Cyber 170s

THE biggest computer contract yet placed by the Chinese government has been awarded to Control Data. Worth \$69 million, it is for a dozen low-end models in CDC's large-scale Cyber 170 line and is subject to CyCom approval. The Cyber 170s are wanted for geophysical exploration, and will join two

Univac view of the 1980s

UNIVAC managing director Bill Read will present the company's view of Computing in the 1980s at the Waldorf Hotel, Aldwych next Thursday, January 18.

The British Computer Society London branch will hear Read's views on the effects of advancing technology, the response of users, and the pressure of plug-compatible manufacturers are increasingly exerting on large mainframe manufacturers.

The meeting, which starts at 6 pm, is open to non-members.

GTE to acquire Telenet for \$59m

COMMERCIAL packet services pioneer Telenet Corp, the company which will supply the hardware for the UK Post Office's PSS Packet-Switched Service (CW, November 30), is to be acquired by GTE. The deal, already foreshadowed (CW, October 5), has now been confirmed by GTE; the bid, in GTE shares, values Telenet at about \$59 million.

Telenet is a so-called "value-added" carrier, leasing lines from telephone companies, principally AT&T, and offering high-level packet-switched services to customers. GTE is a diversified communications and electronics company and the second-largest US telephone service company after AT&T. The acquisition would enable GTE to compete with AT&T's planned ACS Advanced Communications Service, formerly known as the Bell Data Network.

2200 MVP.

The universal small business computer.

Wang would not be where it is today if it still made desk top calculators rather than computers. Consistently one of America's top ten fastest growing companies Wang now boasts the second largest installed base of small business systems in North America.

Wang's 2200 series of computers covers 80% of the market's needs and the MVP is one of the latest products in this series.

The multi-programming 2200MVP supports up to eight terminals and can offer 286 Kbytes of main memory and 80 Mbytes of disc storage. It can communicate as part of a network and with most mainframes, and like all Wang computers it allows easy expansion.

Find out about the 2200 series and its potential for your applications. There could be much more happening out there than you ever imagined.

MICHIE'S PRIVATEVIEW

It's like buying a Rolls-Royce for a fiver!

FOUR years have elapsed since the facts set out in the table below were put together. During that time the micro-processor revolution has shown no sign of slowing — rather the reverse.

One way of expressing the cumulative magnitude of what has happened since the early days is to ask what would be equivalent cost and performance changes in the world of motoring. The answer could be phrased this way: In 1953 you buy a Rolls Royce for £7,500, with a top speed of 150 miles per hour and an average gasoline utilisation of 10 miles to the gallon. In 1974 you are offered one with a top speed of 150 miles per hour and capable of 640 miles to the gallon; the price is £7.50. In 1978 the model shows further improvements, and the price has sunk below a fiver!

luses." The cause for reticence is that this Intel 8748-guided device was the sole working micro-entry of the ten.

That was in August. In September, under the auspices of Wescon, at Los Angeles, ten hopefuls again entered. Seven flunked, the commonest complaint being that optical sensors had suffered disarray from the bright Californian sunlight.

Of the survivors, Wallbanger romped home, the creation of Gary Snsaki, Kenneth MacLeod and Gary Gordon of Hewlett-Packard, Santa Clara. Wallbanger's three rings were timed at 41, 41 and 42 seconds, far eclipsing Charlotte, who was runner up with a best time of 2 minutes, 17 seconds. Wallbanger's secret is "no frills, no optics, no hydraulics" — just a fixed propensity to bang along the right wall at the highest

possible speed. This corresponds, of course, to a "depth-first" exhaustive search of the maze, a provably complete strategy.

The fault for such boring behaviours lies not with the Micro-Mice and their intrepid inventors, but with the organisers. So small a step is needed to transform the Micro-Mouse scene into one of cognitive richness and challenge! Simply requiring that the contestant should run back again through

SOFTWARE FILE-1

IBM plan provides for 'a timely exchange of information' in US

IBM's data processing division has extended an invitation to US software companies to take part in a Software Information Exchange Programme. Announced at a recent conference of the Association of Data Processing Service Organisations (Adapso), the programme was billed by an IBM spokesman as one which will provide for "a timely exchange of publicly available information

relating to software products."

Speaking to Adapso's Software Industry Association (SIA), Edward J. Kane, director of industry relations for IBM's Data Processing Division, explained, "This would be a reciprocal programme, and member SIA firms would exchange publicly available information regarding the announcement and availability of software products with all participants."

Kane added: "IBM's participation would be governed by specific guidelines that would be sent to interested firms on request." He explained that IBM would provide announcement and availability notices to all participating companies and that "selected optional material" would be forwarded on request.

"Other publicly available information that might be required would continue to be available from the local IBM office at the established charge," Kane said.

Jerry Dreyer, Adapso's executive vice-president, commented: "The opportunity for co-operative exchanges between IBM and member software companies would prove beneficial to the participants as well as to the entire computer services industry."

The programme is expected to start early this year.

Q-Pac support is strongly approved by users' association

THE restructuring of support for the payroll package Q-Pac which gave Q-Pac Services responsibility for maintenance and service in the UK (Software File, May 25, 1978) has been received enthusiastically by the 60-strong UK user association.

Q-Pac Services took over support for the package at the beginning of October last year. Since then it has made an all-out effort to help users get more from the system, according to the user association's chairman, K. M. Sherborne of Chloride

Livoral. "One of its major activities has been user training. Some 150 people have attended formal courses, while many others have had "across the desk" training. "This has highlighted the fact that users were unaware of the power and flexibility of the package, and as a result were not using it to its full potential," noted Sherborne. "Many user written programs and manual systems have merely duplicated functions available as standard Q-Pac facilities."

Armed with the new information, he said, many users would change their systems to make use of the software's capabilities. "The association feels that the package has far more potential and greater flexibility than was previously realised. If Q-Pac's service and knowledge continues to be disseminated, many UK installations will be extremely happy with the system."

In addition to demystifying the versatility of the system, Q-Pac Services has also helped users to improve performance. "Q-Pac has always been considered to be a slow system as far as computer time is concerned. However, techniques have been pointed out for increasing throughput speed without in any way detracting from the power of the system. Some people are already talking about increases in throughput speed without in any way detracting from the power of the system. Some people are already talking about increases in throughput speed without in any way detracting from the power of the system."

Sharp puts APL on telex

SIGNIFICANTLY extending the accessibility of its service worldwide, the APL time sharing company I. P. Sharp has complete work that enables users to run APL interactively via the public telex network.

The new facility is intended particularly for data entry to an existing APL application and is also suitable for a limited amount of report printing.

Sites such as branch offices which already have telex equipment can thus participate in an APL data processing system without the expense of acquiring a special APL terminal, and a modem or acoustic coupler.

Telex access can also offer economies to users not yet within local call range of the Sharp network, where telex charges are less than long-distance call rates.

Sharp provides two telex nodes, one in Amsterdam and the other in Rochester, New York. Both are already being used by major multinational

Sharp customers to enter data directly from branches in Africa, India, and South America.

Telex is not recommended for APL program development, however, principally because telex terminals do not handle the special APL characters.

Sharp notes that the completely interactive access given by the system distinguishes it from other APL telex facilities. Terminal users have direct control of their programs, and data entry applications can validate input data online.

The system can also be used for offline modes, though. Most telex terminals have paper tape reader/punch facilities so that telex connection can provide a simple means of transferring APL output to punched paper tape.

HTFS available from SIA

EXTENDING its chemical engineering library, SIA has installed the full range of programs developed by the Heat Transfer and Fluid Flow Service (HTFS).

An extensive range of fully documented programs for equipment designs and performance investigation, the HTFS software runs in batch mode and can be accessed at SIA either in remote batch mode or in on-line interactive mode.

Some of the programs are directly interfaced to the Institution of Chemical Engineers' physical property databank, which is also available on the SIA service.

Organisations wishing to use the software must first join HTFS, and will subsequently be charged just for computing resources used. The programs are supported both by SIA's chemical engineering group and by the SIA's data processing group.

SOFTWARE FILE -2

EDITED BY PETER HEWITT

Honeywell Level 62 service company

A NEW company, Datawell, is now providing software services for Honeywell Level 62 users. Datawell has signed an agreement with Honeywell under which the two firms will co-operate with each other throughout the UK.

Datawell is installing a Level 62 in a computer room provided by Honeywell at its Northern headquarters in Chendle Hulme, Cheshire.

The machine will be rented from Honeywell and will be used by Datawell for the development of software packages and

tailor-made software, and also for software conversion. In addition, Datawell plans to run some conventional bureau work on the machine for outside clients — not necessarily Honeywell users.

Datawell has been set up by Alan Wilford and Bob Flint, who established Wilford Data Centre (Anglia) Ltd in Norwich in 1978, the bureau now known as Anglia Data Services. Alan Wilford also set up the Manchester-based data preparation bureau, Wilford Computer Services.

Bob Flint told Computer Weekly that

Datawell was already carrying out work for one big client, Northern Engineering Industries, a Gateshead-based concern that is installing Level 62s at subsidiary companies all over the country. One of the subsidiaries is Thomas Smith of Rodley, near Leeds, a heavy engineering firm for which Datawell is converting CL 1900 programs to run on Level 62. The process involves converting first to Level 64 coding, then to Level 62. Honeywell itself now offers a set of conversion aids to Level 61/60 users upgrading to Level 62 (CW, November 9, 1978).

Cutting out the deadwood to streamline Cobol

Dr Torsun... study resulted in a Cobol compiler that executes five times faster than the fastest commercially available for its system.

A STUDY of a substantial sample of operational Cobol programs has shown that almost 85 per cent of executable statements are built round just five common Cobol verbs, while others are used so rarely that compiler support for them may be unjustified.

Conducted by the computer science department at Brunel University, the study used around 340 live programs donated by commercial organisations — close to 14 million lines of Cobol code. The study findings were presented to the BCS 79 Living with Computing conference last week by Dr I. S. Torsun of Brunel.

In the programs analysed, MOVE was the most frequently occurring verb at 38 per cent of all statements. It was followed by IF (15 per cent), GO TO (14 per cent), PERFORM (11 per cent), and ADD (17 per cent).

Least commonly used were certain forms of DIVIDE, and DELETE and SEEK. Not one example of these turned up in the programs examined.

Among other findings of the study were a number of interesting statistics relating to practice Cobol usage, including:

- An average GO TO distance of 56 statements, split into forward branches (average jump 71 statements) and backward branches (average 28 statements).

- An average PERFORM distance of 236 statements, with an average 18 statements performed.

- 10 comment lines, 108 data names, 3.15 files, and 55 paragraphs in the average Cobol program — which contained 668 lines.

- 5.76 statements in the average paragraph, and 8 paragraphs in the average section.

- An average user-defined name length of 7.81 characters.

- A high proportion of un-referenced statement labels in many programs, amounting on average to almost 3 out of every 10.

- Very little use of complex conditional statements, with an IF being followed by ELSE only 13 times out of 100, and by a second IF only 6 times out of 100.

The study was undertaken, said Dr Torsun, with the primary aim of providing guidelines for the construction of a fast Cobol compiler.

Because of the shortage of typical Cobol programs in universities and colleges, he had written to about 200 commercial organisations to request samples. About 80 of these had replied and 25 had eventually given programs. Some 40 per cent of the sample had come from British Gas.

As a result of the analysis, the department had been able to construct a compiler that executed around five times faster than the fastest commercially available for its system.

To achieve this, some verbs had been omitted entirely and

the syntax analysis and code generator had been slanted to favour the most frequently used language features.

The compiler, for example, was designed to respond very quickly to the five predominantly used verbs.

Within the scope of each verb further tuning had been undertaken, based on normal patterns

of use. The most frequent data type after a MOVE, for example, had been found to be numeric, at 31 per cent followed by alphanumeric (20 per cent) and numeric literal (10 per cent).

An interesting aspect of the analysis was the extent to which the quantitative measurements made reflected underlying program quality.

Firms had been much more reluctant to supply the necessary live or test data for dynamic program analysis than they had been to provide source code for static analysis, he said. Nevertheless the team had been able to monitor the execution of some 22 of the sample programs.

For this purpose, each program was divided up into "basic blocks" consisting of a run-continuous code portion with just one entry and exit point.

Some 17 per cent of these blocks were never executed. While in many cases this was attributable to the data used for the test, in some cases the blocks had later been found to be logically inaccessible.

Further, 24 per cent of the blocks in the average program were executed just once while 5 per cent of the code was typically responsible for 50-60

per cent of the execution time. When examined dynamically, the five predominantly used verbs accounted for over 96 per cent of the statements executed. Its use in iteration put IF at the top of the list, with 33 per cent, while the frequency of the others was MOVE—27 per cent, GO TO—11 per cent, ADD—20 per cent, and PERFORM—10 per cent.

Although the dynamic analysis generally added around 50 per cent to the execution time of a program, its usefulness in program optimisation and debugging had persuaded two very large organisations to adopt it for use in development work.

Although received with great interest by the conference delegates, Dr Torsun's presentation was treated with some scepticism by a number of those attending.

The chief objection raised was that most commercial Cobol work is I/O — rather than mill-time — bound. It was also remarked that some of the detailed findings, for example, the use of IF, would be considerably different for a sample of more modern programs using structured programming techniques, and Cobol 74 compilers.

PROGRAMMER NOTES

Proposed Fortran deletions

RECENT articles on likely developments in Fortran have prompted a reader to write in defence of some of the established features whose long-term future is uncertain.

A. P. Cranswick, from Plessey Semiconductors, addresses chiefly the subject of the proposed deletions from the language (CW, December 7, 1978).

While these features are for the moment only scheduled for removal from the "core", Cranswick is apparently anxious that this will be the first step towards their complete disappearance.

He also raises the often overlooked point that a "bad" program can be written in any language and that education in the effective use of a language has a major role to play.

He writes: "Surely the objective of any language is that it enables effective communication between parties. In the case of programming languages, communication must be between people — for maintenance and extension; and between people and the computer — to enable the computer to obey the program. It is the first type of communication that people to people communication, that causes most of the problems."

"I recently had cause to look at an Algol program of some 2,000 lines written with double density line spacing, virtually no comments and no formatting. In

a case like this it is largely irrelevant whether a language is 'good' or 'bad'. Any program written in that manner is going to be difficult to follow."

The enforced formatting of Fortran statements, and statement ordering, at least impose some discipline on the coder that gives some help to the reader of a Fortran program. Clarity of the program can be considerably enhanced by ensuring a numerical order for labels and identifying DO loops beyond the normal formatting.

"One would hope, in the case of the December 14 article (Software File, December 14, 1978), that a little knowledge is a dangerous thing, and that the facilities mentioned for possible extinction are to be replaced by other facilities. The EQUIVALENCE, COMMON, BLOCKDATA, Computad GOTO and Assigned GOTO can be used to structure a program effectively so that it is easy to follow and maintain."

"In fact, there seems to be very little literature indicating how Fortran facilities can be effectively used."

"The excellent implementation of Fortran by KDS (this implementation will now probably slowly die, put on the Sigma range of machines, provided, I believe, a firm indication of the manner in which Fortran could be effectively extended."

"For instance, negative DO loops were allowed; IF statements could be followed by multiple statements on a line and were only processed if the IF statement was true."

"These are two simple but very powerful extensions, the latter eliminating a considerable number of GOTOs and labels. Other extensions, while apparently useful, could lead to a considerable lack of clarity in maintaining a program, for instance allowing Blockdata to be initialised in any routine."

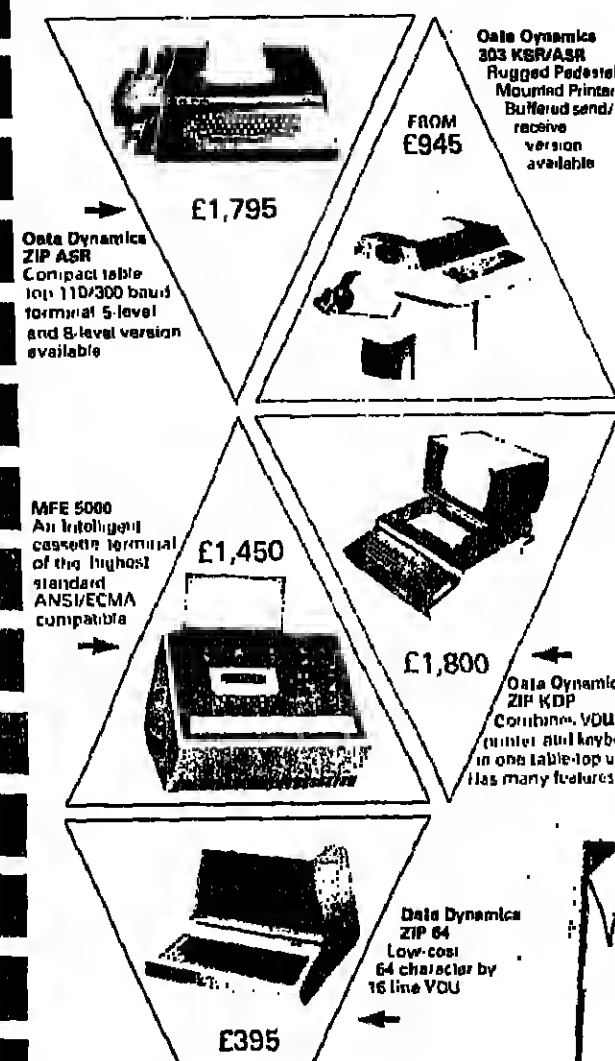

"This is not an attempt to say that Fortran is superior to other programming languages, but that it is a very usable language, which could be improved like anything else, but which will not be improved by wholesale removal of some of the features which make it Fortran."

These are important observations which have considerable merit.

Anal has traditionally engaged in "trailing edge" standardisation and the appropriateness of its undertaking language development is open to question.

Yet very few users concern themselves over possible developments in the standard. If users fail to articulate their feelings on the future of Fortran now, they will have only themselves to blame if unwelcome proposals are eventually adopted.

Telesoftware uses object code and micro

A SPECIFICATION for telesoftware currently being finalised has been proposed as an international standard by its author, W. J. G. Overington.

Said to be compatible with the UK specification for broadcast teletext, the specification is based on object code transmission and uses the instruction set of a microprocessor, designated the 1456.

Explaining why he favours object code transmission and a new microprocessor over use of a high level language, Overington said, "I believe that the use of a high level language as a standard, to allow use of any microprocessor, would be a mistake."

"I suggest that, in practice, the market would polarise into use of but a few microprocessors. The positive benefits of using object code — namely speed, flexibility, and compactness of transmission — would

According to Overington, his specification is aimed explicitly at giving terminal designers maximum freedom.

It will be suitable, he says, for large-scale manufacturing operations yet also takes care to provide for the hobbyist with limited facilities. In addition, any person or company that wants to will be allowed to manufacture equipment to obey 1456 software.

He added that his design for the 1456 was specifically oriented in telesoftware and teletext applications.

Overington, who claims to have invented both the concept and the word telesoftware back in 1974, offers a definition of telesoftware as:

"The concept of producing a remote access computer system by means of the unidirectional cyclic broadcasting of software and its selective use by an unlimited number of independent terminals, each having its own processing element and each characterised by a reception only telecommunications facility."

have been sacrificed for short term compromise."

He added that his design for the 1456 was specifically oriented in telesoftware and teletext applications.

Overington, who claims to have invented both the concept and the word telesoftware back in 1974, offers a definition of telesoftware as:

"The concept of producing a remote access computer system by means of the unidirectional cyclic broadcasting of software and its selective use by an unlimited number of independent terminals, each having its own processing element and each characterised by a reception only telecommunications facility."

A spokesman for CAP, which uses Telesoftware as the name for its videotext terminal programs, most of which are written in MicroCobol, welcomed

OP SPOT

By Bernard Allen

In at the deep end—TOPS gives practical experience

AFTER some eleven weeks on the Training Opportunities Scheme's operations course at Borehamwood College, the students leave the security of the classroom and go out to various sites where they are thrust into the complicated, busy and often hectic environment that is computer operations.

They spend three weeks working with experienced operations staff, seeing what the job entails and learning how the operations department functions.

The work they do during this period depends, largely, on the size and nature of the jobs processed at the installation, and the staff of the site.

Both David Townsend and Steve Ward were extremely pleased with the practical

When Bernard Allen first interviewed Steve Ward and David Townsend, they were four weeks into a fifteen week long Training Opportunities Scheme (TOPS) operations course at Borehamwood College, in Herts.

Now, as they have just completed a three-week practical block and are at the end of their course, Bernard speaks to them again in order to discuss their progress.

training they had been given, as they told me when I visited Borehamwood College on the second-to-last day of their TOPS operations course.

Former golfer and lorry driver, David Townsend went to the First National Bank of Chicago in London. He obviously impressed the staff and management there for he was offered a position at the installation. He accepted and starts in January.

The site houses two IBM System 3 Model 15s, supports an online system with eighteen ter-

minals, and also processes batch and testing work.

David admitted to being "lost at first," but buckled down and tried to make himself useful to the staff as well as adding to his knowledge.

"The supervisor explained that everything would seem rather strange at first — he was right. He gave me a manual and told me to watch how the operators work at the console."

During the first week David worked from 9 am to 5 pm. In the second week he was on the evening shift and during the third he did "earlies."

It was obvious that David gained a good appreciation of the problems which crop up in the day-to-day running of the operations department.

On one occasion, the decompiler broke down at a very unfortunate time; it was late in the evening shift, and listings had to be dispatched in order to meet deadlines.

Said David, "I had to stay late and decompile a lot of output by hand. I didn't mind in the least, because the site hires cabs for the operations staff and I had no problems getting home."

David Townsend

David also learned about dealing with the problems of users online to the system.

He said, "It's important that online users are given a good service. A couple of times they contacted us to complain about their terminal being down. This problem arises if the units aren't powered-on at the time we start the TP program."

He also mentioned an occa-

sion when one of the system discs became jammed as it was being loaded on to a drive. This brought to his attention the need to handle media and peripherals with respect. No machine time was lost on that occasion, he stressed.

David also spent some time in the data control section of the site, when the data controller was on sick leave.

Steve Ward was at the Bromley, Kent, site of the Seismograph Service for his three-week practical block. Like David Townsend, he spent the first week on days, from 9 am to 5 pm. Then he worked a twelve-hour shift system, "four days on, four days off."

Steve, who already has two years' operations experience, didn't have too many problems adjusting to the shift system, but nevertheless expressed his dislike of it.

He said, "When I was an operator at Seiscom Data's site in Sevenoaks, Kent, we worked a twelve-hour shift system. I have never liked it."

"In my view eight-hour shifts are much more practical and must be easier to get used to."

The Seismograph Service site has several different systems, and Steve operated an IBM 360/65, which runs under OS/MFT with Hasp, the Houston Automatic Spooling Program.

He said, "The OS operator commands are quite interesting,

Steve Ward

as they may be abbreviated in order to save the operator a lot of typing at the console. Hasp is a great help because it starts readers and writers automatically."

Like David Townsend, Steve said he was "rather lost at first," but by the third week he had grown in confidence and was able to run the console alone, for an hour or so at a time.

Steve said, "The operators at Seismograph took the trouble to explain some of the operator commands to me. This I found very helpful."

Steve has applied to four installations for a position in operations and has already received an offer from a site in Kent. But he hopes to join a company in Edgware, North London.

Steve and David are both pleased with the training they have been given by Derek Pinnock, who runs the TOPS operations course at Borehamwood College.

They also agree that the TOPS scheme should be given more publicity than it receives at present.

be boyden quiet

New from Boyden. An Acoustic Hood for the Teletype 33.

Purposefully designed to bring peace and quiet to the noisy office.

Featherlight, with a special sound absorbent foam lining, the hood simply clips onto the existing Teletype cover.

Simple access to paper line feed, keyboard, punch and tape controls, leaving paper roll and tape changes unhindered.

Teletype 33. For the latest in a growing range of Boyden acoustic hoods.

Interested? We'd like to tell you more.

Please send me full details of the new Boyden Acoustic Hood for the Teletype 33

The READER procedure under IBM OS

In past Op Spots I have given a broad description of IBM OS, considered the types of message issued by that system in order to communicate with the operator, and discussed the problems of main store, or core, fragmentation.

Now I would like to give further consideration to the READER procedure: that part of the operating system responsible for taking jobs from input devices and placing them on the input queues.

IBM OS will support up to three READER procedures at any one time. Each is assigned a physical unit, normally a card reader, but another device, such as a tape reader, may be used.

The command used to start the READER procedure has the following format:

S PROCNAME,IDENTIFIER,
DEVICE ADDRESS

Installation standards will often dictate the exact command used by the operator in

order to start the READER. At many sites it will not include an IDENTIFIER, and might be as follows:

S RDR,00C

In this case card reader unit 00C is assigned to a READER procedure called RDR. Once the procedure has been started it stays in main storage and may be used to place card input onto the job queues.

An IDENTIFIER is not included in the above example as they tend to be seldom used. However, they may be applied to good effect at installations where open shop testing is carried out. At such sites, one card reader will be assigned to live work and another to testing, allowing the programmers to input their own work to the system.

The following commands might be used to start the READER:

S RDR,LIVE,DOB
S RDR,TESTS,00C

HINT OF THE WEEK

Safe to work alone?

AT sites which are very small or "tight of pocket", the operators are sometimes expected to work alone.

This may be all right when other staff are on the premises, but that is often not the case, as on the evening and night shifts.

At some sites, the security guards enter the computer room to see that all is well, but quite often they are unable to do so as they do not have the appropriate key or other means of entry.

These points are raised by Deborah Palmer, an operator, seconded for the safety of operations staff, who works at the Working House, installation of the Gateway Building Society.

Says Deborah, "I know of one operator who was locked out

while working alone in the computer room. He wasn't found for over an hour and this happened during the daytime, too."

For operators who work by themselves and are worried about their personal safety, Deborah has the following hint.

"Discuss the matter with your operations manager. If he is unsympathetic, and you are not a member of a union, visit your local Health and Safety Executive and ask for advice."

"One operator took this advice and was told that they would suggest at least two operators on shift, when there is no one else in the building. The officer also said that he would raise the matter on his next visit to the installation."

When IDENTIFIERS are used in this manner, they provide the main console operator with extra information when he enters the OS DISPLAY command. This will help him ensure that the work schedule is kept to, and will aid the running and coordination of the department.

And when it is time for open shop testing to cease, he may STOP the appropriate reader device by specifying "TESTS" rather than the unit number, as

in the following example:

P TESTS

As earlier mentioned, batch input may also be read from magnetic tape. To achieve this, the following command might be used:

S RDR,290,123456

In this example, 290 is the address of the tape drive and 123456 is the volume serial number of the magnetic tape on which the input exists.

Tektronix Microprocessor development systems

Workshop

Please send me full details of Microprocessor Development Systems—Workshops. Support is currently available for the following devices: Intel 8080, Intel 8085, Motorola 6800, Texas Instruments 5900, Zilog Z-80, Fairchild F8, Moselk 3870, Moselk 3872.

Engineers, Mathematicians, Scientists and Technical Programmer/Analysts

Before the end of this month, you can find out just what ARAMCO has to offer YOU—FACE TO FACE!

The Arabian American Oil Company (ARAMCO), in computer terms, is one of the most exciting companies in the World with the largest configuration between Rome and Tokyo.

As a result of ARAMCO's exceptional growth, the Manager of the Computer Department will be in London from January 22nd to January 26th. He wants to hear about your experience and to discuss with you how you can best utilise your know-how with ARAMCO, whilst, at the same time, developing new skills and expertise in a dynamic and thoroughly sophisticated environment.

He will want to meet people whose backgrounds have covered:

General Scientific applications with experience of Fortran and/or PL/1.

Civil Engineering applications with experience of the ICES system on an IBM 370; knowledge of COGO, or ROADS, or STRUDL; and the use of Fortran and PL/1.

Simulation sciences and experience of GPSS and linear programming systems.

Electrical Engineering applications with experience of Fortran and/or PL/1.

You must have a minimum of two years' up-to-date experience which is relevant.

We would also welcome contact from Programmer/Analysts whose background is in Business/Commercial applications using COBOL and/or PL/1.

From January 22nd, the Company's representative will be in London for one week to meet you and discuss the possibilities and benefits to your career of a 1 or 2 year, renewable contract in Saudi Arabia. Please send a résumé today, or ring, quoting ref 8403, to Richard Darvell for documentation. Astral Recruitment Associates, Astral House, 17/19 Maddox Street, London W1R 0EY. Telephone 01-629 2356 (ansafone after 6 pm),

SMART MICRO-BASED VISUAL DISPLAY TERMINALS

Model 7008-7009

- British design and manufacturer
- Based on 8080A Microprocessor
- Two-page Memory 3,840 characters
- 24 Displayed lines of 80 characters per line
- Switchable Transmission Spade from 50 baud to 19,200 baud
- Split Speed Transmission Mode
- Qual Interface - CCITT V24 and 20/60 mA Current Loop
- Hard Copy Printer Output
- Protected Field Format - Blink - Background or Full Brightness
- XY Cursor Address (send and receive)
- Roll or Page Mode
- Video Output for External Monitors
- Full Character Easing Feature
- Block Transmission from Screen by Line or Page
- Green Phosphor Non-glass screen

Model 7001-7002

- 24 Lines of 80 characters per line
- Selectable Baud Rates from 50 to 19,200 Baud - CCITT V24 and 20/60 mA Current Loop
- Teletype Compatible
- Hard Copy Printer Output
- Selectable Half or Full Duplex
- Video Output for External Monitors
- Green Phosphor Non-glass screen

Model 7000

- Teletype Compatible
- 24 Lines of 80 Characters per line
- Selectable Baud Rates from 50 to 19,200 Baud
- CCITT V24 Interface
- Selectable Half or Full Duplex
- Green Phosphor Non-glass screen

PEOPLE AND EVENTS

First director for Avon universities

THE University of Bristol has recruited an experienced Englishman, at present living in Australia, to head the Avon Universities Computer Centre (AUCC).

Dr G. N. Lance, until recently chief of computing research at the national Australian science foundation CSIRO, in Canberra, will be the first director of AUCC and will be responsible for setting up the centre's computing services, based on a Honeywell Level 68/DPS Multics system (CW, June 22, 1978).

The Multics system, the first to be sold outside the US, was delivered to Bristol shortly before Christmas (CW, December 21/28, 1978) and is expected to complete its CCA trials by the end of March.

Dr Lance, who will take up the appointment in March, has previously been responsible on four occasions for establishing computing facilities. While with CSIRO, he designed and developed CSIRONET, an Australia-wide network based on a CDC Cyber 76 supporting 30 RJE stations and over 400 interactive terminals.

Although primarily intended to serve the five institutions in the area - Bath, Bristol, and Exeter universities, University College Cardiff, and the University of Wales Institute of Science and Technology - the Level 68 is likely in the long term to be integrated into the South-West Regional network as a whole via a link to the 2980 at Bath.

The Computer Board plans that the existing System 4 equipment at Bristol and Bath will then be phased out.

Head of new department at CDC

TO help expand the range of products available from its Data Services bureau division, Control Data has set up a product department to look for new software packages and produce marketing aids for them.

The unit in charge of the new department is Geoffrey Hollind, who has been a sales manager with the Data Services division in London since 1974. He will be responsible for the Data Service's offering of large-scale engineering and scientific processing on its Cyber service, which is based on a line-up of Control Data mainframes in Brussels. It also provides financial modelling on its Cal service which runs on IBM 370/158s at Cleveland, Ohio, and general

Edited by Nancy Pocock

Ergonomics specialist at Butler Cox

A UK EXPERT in systems ergonomics and word processing, Tom Stewart, has been appointed a specialist consultant with Butler Cox and Partners. Stewart, who is also a well known author and public speaker, was previously a lecturer at the University of Loughborough. In his new position he will be working on consultancy assignments in the fields of ergonomics, man-machine interface and the effects of systems on people.

AMD director

THE new director of European marketing for Advanced Micro Devices is Norm Miller. He will be stationed at the company's European headquarters in Brussels, Belgium. Miller was previously director of special projects for the company, and before that was European general manager for Signetics Corporation. In his new position he will be responsible for all European marketing, sales and application efforts.

COURSES

INFORMATION systems, organisational change and social values are the subject of an EBCS Great Britain course on February 20-21. It is intended to give managers and team leaders training and practice in producing good quality, high level reports. Registration through EBCS Ltd, 10, Pinner, Middlesex, 01-837 0471.

THE London branch of the BCS is holding a two-day course on programmatic standards in South Kensington on February 20-21. It is intended to give managers and team leaders training and practice in producing good quality, high level reports. Registration through EBCS Ltd, 10, Pinner, Middlesex, 01-837 0471.

CONTROL Data Institute is holding a series of seminars and courses during the first half of 1979. The training programme offers courses applicable to management and all data processing functions. To outline the programme, a brochure is available at the Institute, 10, Pinner, Middlesex, 01-837 0471.

CONFERENCES

THE analysis of increasing the theme of Informatics 6, the fifth in a series of conferences on the general theme of representing, organising and manipulating information. The conference will be held at Queen's College, Oxford on March 21-23, and is sponsored by ASL and the British Computer Society. Papers are invited within the areas of semantics and general semantics, linguistic sciences, and applied semantics, artificial intelligence systems and information retrieval systems, and should be submitted as soon as possible. For further information contact the Conference Organiser, ASL, 3 Belgrave Square, London SW1X 8PL.

THE third international conference on trends in online computer control systems is to be held on March 27-29 at the University of Sheffield. It is organized by the IEE, and further information may be obtained from Alan Cunningham, Secretary, IEE, Savoy Place, London WC2R 0BU.

Change in jobs market warning

A WARNING that the shortage of computer professionals in the UK could eventually come to an end was given at BCS 79 by David Finberg, director of the National Computing Centre.

He said that he had recently been informed during a trip to Finland that, although there were a severe shortage of computer professionals in that country three years ago, the situation had now been reversed and there is a shortage of jobs for trained computer people.

Last year, the French computer paper 01 informatique reported that many computer professionals in France were out of work.

Less noise

NOISE levels from daisy wheel printers can be reduced using the Powquip range of acoustic covers now available from the Powquip Equipment Company of London. PSC claims that the Powquip covers reduce noise by 75% or more without any hindrance to accessibility or visibility.

Online print press likely by mid-1980s

A HIGH-SPEED offset printing press that could operate online to a computer may be the successor to the IBM 3800 laser printer in the mid-1980s, according to a report on printers and printer technology, now available from the US organisation, SBS Publishing. The report concerns itself with the use of printers in the much discussed "office of the future" and covers a wide range of application areas, including word processing, electronic mail, compiler output microfilm and intelligent copying and facsimile printing.

Two rapidly developing non-mechanical printing technologies - ink jet printing and xerography / electrophotography - are each discussed in chapters of fewer than ten pages, while 24 pages are devoted to mechanical printing.

The report predicts that Xerox will become a major competitor for IBM in the next two years as a supplier of ink jet printers for word and data processing systems. It also predicts that Centronics and Datapoint will soon announce low cost matrix ink jet printers, and that IBM will announce ink jet based units in 1981 to replace the daisy wheel printer mechanisms that it buys from Qume and later to replace its Selectric golf ball printers.

Teletype and AT&T are predicted to move into the ink jet printer market in the early 1980s.

A chapter on "exotic" technologies in printers includes techniques that are already used commercially, like thermal matrix printing, electrosensitive printing, where an electrical voltage is applied to specially coated paper - and electrophotography, the technique used by Honeywell in its 18,000 lpm Page Printing System.

A less familiar technique discussed is aerosol ink mist, where a mist is applied to plain paper and characters are formed by a free-ion generating matrix. The colour of the ink mist could be changed as required.

Another "exotic" technique, magnetography, is described in the report as "a sleeping giant". This technique involves a magnetic ink and could be employed in an offset printer where the ink would be applied to one roller, transferred to a second and from that to the paper. The report includes a diagram of such a machine - an ink mist printing press - that has been patented by IBM.

*Printers for the Office of the Future. 150 pp. \$750. SBS Publishing, 4326 Stevens Creek Blvd, Suite 100, San Jose, California 95120, USA. Tel: 0101-408-243-8121.

Plessey to sell US bank terminals in UK

LATEST contender for a share of the increasingly crowded UK market for banking terminals is Plessey - with a line of branch controllers and terminal units from US terminals manufacturer Bunker Ramo. As exclusively revealed in Computer Weekly (November 23, 1978), Bunker Ramo is in final negotiations with Unisys on an agreement under which, where appropriate, Unisys will recommend Bunker Ramo terminals to banking customers for its mainframes. However, in the UK, Plessey will be the sole source for the terminals.

The modules on offer from Plessey are the Bunker Ramo System 80 line, which includes a branch controller, a validation/journal printer, a computer teller terminal, and an administrative VDU terminal.

The controller is a very compact minicomputer backed with a floppy disc unit.

The processor is built by Bunker Ramo, but based on Digital Equipment architecture, and can address up to 256 devices and be backed with up to 256K-bytes of memory.

The Teller Terminal includes a 5in CRT display which puts up six lines of 40 characters, 30 function keys, a numeric keypad, and is built around the Motorola 6800 microprocessor. It takes an optional card reader and an alphanumeric keypad for use by customers at the teller window.

Other display terminals on offer are a 9in 960 character VDU and a 12in 1920 character VDU. There is a passbook printer and two heavy duty printers.

The minicomputer is programmed in a proprietary table-driven language, and protocols are available for communication with IBM, Burroughs, Univac and Honeywell mainframes.

Both sides have previously met with ACAS and although the managers are not optimistic of a quick solution, a spokesman said, "A 50% improvement on the present offer would make us more than happy."

TV sets with built-in decoders

COLOUR television sets with built-in Telex Instruments decoders for both teletext and Prestel videodata are on the way to the UK from Finland. The Finnish manufacturer Selenia has sets incorporating the TI XM-11 teletext decoder ready for shipping to the UK this year, and is testing sets incorporating the TI VDP-11 videodata decoder for delivery later in the year.

Selenia is also monitoring developments with videodata in West Germany and the Netherlands, both of which have bought rights to the UK Post Office videodata software and expertise, with a view to offering sets in those markets.

More links for IPSS on cards

THE Post Office's International Packet Switching Service, which came into operation at the end of last year, allows users in the UK and the US to access computer services and data bases across the Atlantic, although many more are offered in the US than in the UK.

Canada, Japan and Eire may later be linked to the network.

The IPSS exchange in London, based on a Telex packet switch, is accessed over leased or dial-up lines in the telephone network

Scratching where it itches

TWO tramps were sitting on a park bench. "Would you like a steak and chips?" says one. "Yes please," says the other. "Me too," replies the first, staring glumly into space.

Reflect for a moment upon this exchange. The first tramp has made a correct analysis of the second's needs: spot on, no question about it. In fact he fully endorses the need, subscribes to it himself. But he lacks the means to satisfy it. The humour (slight as it is) derives from the fact that by asking the question the first tramp is assumed to be capable of providing the answer. The question is taken as an offer.

A management services director and his boss were sitting on a bench in a park. "How would you like an information system that is designed to reflect rather than dominate your organisation structure, provide good communication and a high level of decision-making support, all at a price you can afford?" says the MSD. "Yes please," says the boss. "Me too," says the MSD staring glumly into space.

In this case, however, the joke is on the management services director. For in truth technology now exists for him to deliver the kind of system he has described. Much of the ill-repute in which systems were held in the past

has stemmed from the inability of the systems manager to deliver a product which matched the expectation of the user. There is plenty of evidence that this situation need no longer prevail.

What lies behind this transformation in the ability of systems to meet the user's needs? There are many specific developments which are contributing towards this change. They include the advent of economic word processing equipment, the imminent availability of videodata, the possibility of improved facilities for telecommunications such as electronic exchanges and satel-

lite channels and a host of other specific developments. I want, however, to explore in this introductory article the basic phenomenon which I believe lies at the heart of all these developments. It has been termed the Convergence of Technologies and it manifests itself through the ubiquitous microprocessor. "Silicon technology — the technology of the computer industry — has invaded the telecommunications industry and the office products industry. The techniques devised by computer manufacturers and the suppliers of semiconductors have become basic to the production of stored program con-

trol (SPC) telephone exchanges such as the microprocessors that appear in communication satellites and word processing systems.

Consider for a moment the importance of this change upon computer companies and telecommunications suppliers. In the past the major telecommunications firms enjoyed a virtual monopoly in the supply of exchange equipment, switching devices and subscriber apparatus to the telephone administrations of the world. Ten years ago it would have been unthinkable that a computer company might attempt to break into this market.

Today, however, we see that IBM has become one of Europe's largest suppliers of private SPC exchanges. Its current offering in this market, the 3750, has achieved a useful penetration of the market in Europe, although it has not been released as a product in the US. There can be little doubt that IBM would also like to break into the market for what Americans call "main office equipment" and what we call "central telephone exchange equipment." A sceptical reader might doubt whether IBM could achieve this aim, since the PTs of Europe might be expected to resist it. But the same sceptic would have been doubtful about the future of the 3750 — and would have been wrong.

On the other side of the Atlantic IBM, together with two partners, has established Satellite Business Systems Inc to provide services within the US for broad-band communication of voice, data, text and video traffic.

While all this is going on at IBM, other companies are seeking to widen their product range to reflect the reality of convergence. Research and development costs and marketing expenses associated with microprocessor-based products can be spread very thinly over a wide range of technological products. For this reason we see the giant American oil company Exxon acquiring a number of companies in the area of office systems. One of their most interesting acquisitions is the Delphi company which offers a very advanced voice switching system capable of expanding into other application areas such as electronic mail.

We see Nixdorf developing its own range of highly specialised telephone handsets. We see companies such as Plessey and GEC adding new features to their traditional telephone exchange equipment to permit the switching of different kinds of traffic. Perhaps most alarmingly we see the largest communications company in the world, AT&T, launching an intelligent network service in the US which can only be interpreted as a frontal assault on IBM. This will lead to the greatest legal battle in the history of computing.

Against such a background, the individual user must try to plot a path which is secure, cautious without being reactionary and reasonably cost-effective. It is impossible to plot such a course if decisions are made piecemeal. Each new product and service offered to the user needs to be evaluated and interpreted against a coherent view of the future of systems. There is no other way

to avoid going into a technological end-decise. There are a number of lessons which the user must learn. The first is to broaden his vision of the role of systems. Our research suggests that the average company spends around 2 per cent of its total cost on conventional telecommunications. To top management, such a sum often appears trivial, accounting for the lack of interest which main board directors often show in DP. The cost of handling information in the same company, however, is likely to exceed 20 per cent of total cost.

Many of the most important developments in systems over the next five years will be outside the domain of conventional DP. They will be concerned with the quality of office services given to managers and skilled technical staff in areas such as voice telephony and text processing. They will directly influence major areas of excessive cost and poor performance — what the Americans call "scratching where it itches."

Most management services directors also recognise that the skills available to them are deficient in terms of the scale of the opportunities. In many companies the management services director and his staff have mostly grown up in the field of DP. Telecommunications and office automation are areas where they lack the intuitive skill that goes with experience. In most companies there is an urgent need to increase the range of available skills in these areas.

And so the information system which matches rather than dominates the organisation and provides accurate and timely information to support decision making is a technologically feasible proposition. The secret resource in this equation is neither technology nor money, but the human skill and ingenuity required to conceive, conduct and operate such systems.

The competitive advantage of these companies and nations which most successfully do this is intellectual challenge and innovation and perhaps social

REPORTS FROM THE FOUNDATION

Reports from the Foundation is a new Computer Weekly series based on the work of the Butler Cox Foundation research group. The reports will examine a variety of topics relating to the development and use of information technology. In this first report, the Foundation chairman, DAVID BUTLER (pictured left), takes a look at the future role of the management services. Butler is chairman of Butler Cox & Partners, and is responsible for all the company's research-based services.

MICRO NEWS

Gallium Arsenide based chips a Univac priority

ALL the major computer companies now have their own in-house semiconductor research establishments, but much of the work is carried out unseen and unremarked.

However some extremely interesting pointers to Univac's thinking and plans in the microelectronics field emerged when Dr Barry Borgerson, director of research and technical planning, visited London last month and gave Computer Weekly an exclusive interview.

The principal technologies that Univac is working on for VLSI, very large-scale integrated circuitry, are short channel NMOS and CMOS. It is also researching into Gallium Arsenide as an alternative substrate material to Silicon.

"Electron mobility in Gallium Arsenide is five times greater than in Silicon, but it is expensive, and the performance is not as good as Silicon," said Dr Borgerson. "We are also working on very fast emitter-coupled logic."

"In fact we have in-house facilities for four technologies: ECL, NMOS, CMOS and Gallium Arsenide. We have to have our own: not only is it cheaper than buying in the chips, the circuits that we want are simply not available from third party suppliers. The volumes are too low and would be given low priority by the semiconductor manufacturers."

The company has both electron beam and X-ray equipment for circuit drawing, and Dr Borgerson says that a combination of the two looks promising for producing high density circuits. The approach involves drawing masks using electron beams, and then using X-rays to etch through the masks on to the chip.

Although not following IBM down the Josephson Junction path, Univac is studying the effects of temperature variations on different materials.

Josephson Junction technology enables very high-speed logic to be built, but requires temperatures close to Absolute Zero (-273°C) to operate. However the ability to operate over a wide range of temperatures is also important, and Univac is studying Niobium-based technology.

Scrumpi maker dies

JOHN Miller Kirkpatrick, founder of Sywood Electronics, and one of the best known characters of the personal computing scene in the UK, has died. A computer programmer and systems analyst by training, he started Sywood by training, he started Sywood by training, he started Sywood by training. From this he moved into the low-cost microcomputer field, with a £60 kit based on the National Semiconductor SC/MP processor. This was Scrumpi 1, which was followed in rapid succession by enhanced versions that kept the Scrumpi name. About three months ago John fell ill. At the time, Scrumpi 4 was on the stocks.

Eyes and ears

The Butler Cox Foundation is a research group which examines major developments in the microelectronics field. Its members include computer manufacturers, office automation suppliers, and telecommunications companies. The Foundation's research is aimed at providing a coherent view of the future of systems. There is no other way to avoid going into a technological end-decise.

Industry speculates over rumours of 'entirely new' Intel 16-bit device

SPECULATION is rife that Intel could be introducing an entirely new 16-bit device in addition to enhancements on its 8086 16-bit chip.

The enhancements include an 8 MHz version, which will upgrade the throughput of the standard version with its 5 MHz

clock rate. They will also include the 8089 input/output processor and 8088, 8-bit data bus version, which were both first rumoured over a year ago (CW, November 24, 1977).

The 8089 is expected to be introduced during the second quarter of this year, and is an

important peripheral device in the 8086 range. Its function will be to take a substantial load off the CPU chip in systems where there is a large amount of I/O processing.

The 8088 will follow a similar approach to that followed by Texas Instruments with its 9880/9985 versions of the 9800. A further enhancement that is the subject of speculation at present is a single chip version of the 8086. An Intel spokesman in Santa Clara, California, confirmed that such a device was the subject of a current research project within the company, but said that there was no timetable laid down for its introduction.

More speculation centres around a microprocessor that is being called the 88000 in industry. The speculation suggests that this part will be a completely new 16-bit design that will quickly supersede the 8086. The Intel spokesman said that he had heard this rumour, and suggested that that is all it was.

Motorola market test hots up 64K RAM race

THE race to be the first company to actually have the first 64K-bit RAM to market heated up considerably last week with the news that Motorola had just produced its first test samples of the device in the US.

Through the Japanese company, Fujitsu, was the first to make samples of a 64K device available last year (CW, April 13, 1978) this part was dismissed by many experts because of its non-standard power supply requirements. The big race was felt to lie in being in the market with a single 5-volt supplied component, with an access time preferably in the 150 nanoseconds range.

Texas Instruments were the first to announce such a part, but this is now the subject of some delay, and the company is telling major customers not to expect samples until February at the earliest.

Now Motorola is poised to make its bid. The part fits the basic criteria generally assumed by experts to be the right one, having a 150 nanosecond access time, and a power dissipation of 250 milliwatts. The power supply is a single +5 volts.

The only other manufacturer with a 64K memory available is IBM. This part has been in full production for about a year, according to the company, though it is very unlikely that any of them will come available on the open market.

Among the other contenders expected to have samples of their 64K memory available during the next few months are Mostek, Intel, National Semiconductor and a variety of Japanese manufacturers.

There is growing speculation, in fact, that some form of agreement will be reached by Mostek and Intel on standardising their respective devices, as a follow-on to the second sourcing agreement on the Intel 8086, 16-bit microprocessor.

The form of the agreement is still very much open to question, for though the two memory specifications are broadly similar, they have one fundamental difference. As these devices use a single power supply voltage, one of the 16 pins in the package is left unassigned. Intel favours leaving it as such, while Mostek favours putting on some automatic function, such as an automatic refresh, on to the pin.

Motorola has also been active in development associated with the MACS 68000 16-bit microprocessor. Some of this work has gone into providing extra software support. While the chip's own compiler will be written in

Personal (CW, September 7, 1978), the company is now also developing Assembler and Simulator cross-products written in Fortran.

According to the company this is only a temporary step. The cross-products are intended for major potential users that

already have mainframe computer installations available for systems development work.

Also in the pipeline is a new development system for the micro, which has already been unofficially christened "MAC-Surcisor", after the existing EXORcisor system.

Two features currently understood to be planned for the new development system are downward compatibility to the existing 6800 family of microprocessors, which would allow one system to be used for all device types from Motorola, and a multiple-seat capability.

Atlantic Computer Leasing

FLEXLEASE: flexible leasing of all IBM Computers and Peripherals. FINANCIER: low cost leasing and short term rental of all IBM Computers and Peripherals. Ex-stock availability of most current range IBM Computers and Peripherals on sale or lease.

Atlantic Leasing

IBM Systems 32/34/38 flexible leasing. Minicomputer/Word Processing machine leasing, supplier leasing schemes of all kinds, industrial plant and equipment leasing, plus tailor-made lease and rental plans for industry.

Atlantic Computer Engineering

Installation and discontinuance on all IBM 370 Systems and Peripherals. IBM Computers and Peripherals refurbishment, IBM feature supply and fit services, IBM 370 Systems memory upgrades, plus consulting and audit on all IBM Computer Products.

THE BRIDGE BETWEEN MANUFACTURERS & USERS OF MICROELECTRONICS

Now in its second great year, Microsystems is a combined conference and exhibition aimed at alerting industrialists and businessmen to the meaning of the micro electronic revolution.

Learn how to develop and use successfully the new microprocessor-based technologies. Find out what new skills are needed, what costs are incurred and how to maintain and test microprocessor-based systems. Talk to over 60 leading firms who will show, new products and ideas to solve business and technical problems. The Exhibition is free. The Conference costs £55 + VAT for each of the first two, professional days (£95 + VAT for a 10-day ticket), and £7 + VAT for the final, personal computing, day. Microsystems is sponsored by Computer Weekly, Data Processing, Electronics Weekly, Microprocessors, Systems International, Electron, Electrical Times, Electrical Review and Wireless World and is organised by Lillie Promotions Ltd, Daisey House, Stamford Street, London, SE1 9LU.

CW

Introducing the HP 2621.

Hewlett-Packard's new addition to its CRT family includes hard copy at the press of a key and a half dozen other very sophisticated features. But the best news is that it is easy to use and costs just £1,596*

We took a long, hard look at how you use a simple CRT terminal. We applied 10 years experience producing sophisticated high-performance computer products and engineered the 2621 from just one point of view: yours.

Bright, high-resolution display

If you used a CRT all day, you'd demand the brightest, sharpest display made. So we didn't take any short cuts on the 2621's display. It's the same display with enhanced 9x15 character cell you see on every HP CRT terminal, even our top-of-the-line models.

Scrolling memory

Interactive sessions go faster if you can look back at what you've already done. So we designed two full pages (48 80-character lines) of continuously scrolling memory into the 2621.

Friendly typewriter keyboard

...Which makes the 2621 easier to learn, faster to use. And to accelerate keying in numbers, we put the numeric keypad right in the middle of the keyboard.

Pre-programmed function keys

We increased the capability of the 2621's simple keyboard with eight special keys. In regular use, they control the cursor, rolling and scrolling. But they're also labelled on the screen with pre-programmed functions which, with a touch of the shift key, control self-testing, terminal configuration, display functions and editing.

Comprehensive editing

Editing? On a simple CRT? Sure. The 2621's comprehensive editing includes character and line insert and delete, clear line and clear display. What's more, the 2621 keeps your input separate from your CPU's so you can edit replies before sending them to your CPU. And all without rewriting a line of your system's software.

The HP 2621 offers a built-in 120 CPS thermal printer that slips onto a hard copy of your display in seconds.

Easy interface

The 2621 communicates with your CPU at 110 to 9600 baud through an interface directly, or via a modem. The 2621 is also available without the built-in printer for £908*

*Prices correct at time of going to press

INTERNATIONAL BRIEFING

Canadian privacy threat

THE Consumers' Association of Canada has expressed concern to the Canadian Parliament that a proposed nationwide bank payments system would constitute a threat to individual privacy. The Association wants four members of the general public on the board of directors of the Canadian Payments Association, the system's operating body.

Commenting on the large amounts of information on individuals that would be accessible on computer files, Helen Anderson, of the CAC, said: "It's 1984 staring us in the face. It's Big Brother. I think we will lose the battle by default unless we all stand very firm on this."

Mexican offshoot

A MEXICAN subsidiary has been established by plug-compatible peripheral manufacturer, Storage Technology. Based at Mexico City its first customer is the Institute of Technology at Monterrey.

8100 for S Africa

IBM has sold the first 8100 information system in South Africa to Pretoria College for Advanced Technical Education. The system will consist of a central processor and online display screen and printers which serve as workstations. Although the system can stand alone it will be linked to the Department of National Education IBM 379 installation, also in Pretoria.

More Amdahls

FOLLOWING installation of the first Amdahl 470V/6 at the Italian Finance Ministry (CIV, April 27, 1978), three more of the IBM plug-compatible mainframes have been installed with agencies of the Italian government. The Finance Ministry has installed a second V/6, and the Italian Treasury has installed two, replacing several large-scale IBM 370s in the process.

Tandberg rescue

A RESCUE plan has been formulated for the computer peripheral interests of the bankrupt Norwegian company, Tandberg (CW, January 4). A new company, owned 40% by Norway's national Industrial Aid Fund, and 20% by the Kongsberg heavy engineering and electronics company, minimektronik Data, and the Simrad electronics company, is to negotiate with the Tandberg receiver for acquisition of the visible parts of the company.

Plans for Mark III

THE new company, General Electric Information Services, formed to operate and market the GE Mark III time-sharing service worldwide, has now come into formal existence (CW, June 15, 1978). GE plans to offer users intelligent terminals for attachment to the network along with application software which is on test in the US.

THURSDAY, JANUARY 11, 1979

Framework for sharing technology with Third World

BILATERAL collaboration between one developed and one developing country provides the most viable framework for the sharing of computer technology, believes Alan Benjamin, director-general of the UK Computing Services Association.

Speaking to the Specialist Group for Developing Countries at BCS 79 in London last week, Benjamin noted that CSA members were working in 68 countries, many in the Third World, and said that UK government-backed collaborations were being discussed with the governments of four countries.

The four are Mexico, Greece, Turkey and the Sudan. The ventures are in various preliminary stages of discussion.

He rejected the term "technology transfer", preferring to talk of sharing technology — "sharing implies that there are no strings attached," he said — and outlined three preconditions for successful sharing of technology:

- The needs of the developing country should be clearly identified and stated;
- The developing country must be prepared to devote adequate resources to the projects;
- The projects should be independent of political constraints, since changes of government are particularly unpredictable in developing countries, and unless projects were seen to be of value by government and opposition alike they were likely to founder following a change of regime.

Although the concept of sharing implies a matching of resources with needs, the resources being with the developed country and the needs in the developing, the flow of benefits was by no means one way.

"We are involved with one country where an intensive three-day session made it clear to us that they had thought through their training requirements far more thoroughly than we have, and some of their procedures could be applied to advantage in the UK," he said. "Since typically one is involved in detailed day-to-day discussions with the government of the developing country, one gets surprisingly close to the fundamental workings of that government, and is in a unique position both to influence and to learn."

Outlining the kind of projects the UK government and the CSA are keen on initiating in partnership with Third World countries, Benjamin took the example of one country where collaboration is getting under way.

"They had one vital government computer system hanging by a thread, with a single ageing analyst, the only person who really understood it. We are now laying plans to put together a training scheme for ministry personnel, looking to develop mid-term administrative systems, and establish standards and documentation systems."

"It should lead to the development of two or three major systems. The only condition that we are imposing is that at every stage of every project, indigenous staff of the country should be present and involved."

Power back-up for Delhi 2960

THE ICL 2960 for the New Delhi Indian Institute of Technology is to be powered by a Chloride Transpac uninterruptible power supply worth £54,000. Now installed in Delhi, the power supply, shown in the picture undergoing final tests at the Hastings factory before despatch, will protect the computer from Delhi's erratic electricity supply, and includes batteries capable of maintaining power for up to 15 minutes in event of blackout.

South African handbook

"OUR 66th year... and still going strong," reads the front cover advertisement by ICL on the first issue of the South African Computer Users' Handbook. "For many years there has been a growing need for a handbook of facts on computers and data processing in South Africa," says a statement by the publishers. The five key handlings included are recruitment and personnel, computer suppliers, general/business equipment, consultants/software/services, computer installations, and associations and utilities. Of interest to many will be the computer installations section which gives a comprehensive list of definite mainframe/minicomputer/micro systems installed.

Iberia joins the Univac flight path

THE Spanish national airline Iberia has followed Lufthansa and SAS along the prescribed Univac migration path by laying plans to replace its Univac 494 mainframes with an 1100/80 system. As an interim step to installing the four-processor 1100/84 system, the airline is to supplement its existing three 494s running reservations, and two 1100s running sales and revenue accounting, with an additional one of each.

Transpac goes live —but with only four switching centres

THE French national public packet-switched service Transpac came into service just before Christmas — but in a highly truncated form. Only four of the 12 switching centres planned to be operational from day one actually came into service. Two are in Paris and the others in Rennes and Lyon.

Since October, when the part privately-owned Transpac company opened its doors to subscribers, over 100 organisations have reserved ports on the network, which uses the international X25 packet-switching interface standard.

Transpac offers virtual circuit full duplex synchronous communication at 2,400, 4,800, 9,600, 19,200 and 48,000 bps. Both permanent and switched virtual circuits are offered (the packet network equivalents of leased and dial-up lines), plus two modes of connection, packet mode for users capable of formatting their own packets for the network, and character mode for asynchronous terminals.

There are three elements to the Transpac tariff: a monthly connection charge, a circuit charge and a traffic charge. Taking 2,400 bps traffic, the connect charge is 800 francs per device per month; the charge for a permanent virtual circuit is 216 francs per month for each location to location link, or for switched virtual circuits, 0.01 francs per minute per circuit and

a traffic charge of 0.06 francs per kilobyte of data transmitted.

The traffic charges are reduced by 40 per cent after 7 pm, before 8 am and on Saturdays, and by 80 per cent from midnight to 6 am every day and all day Sundays. For people without a local packet-switching exchange, the direct access charge is replaced by the standard telephone or telex charges to the nearest exchange. It is noteworthy that charges on the network itself are

volume-dependent but distance independent.

The Transpac operation company is 67 per cent publicly owned. Another 28 per cent of the shares are owned by a company called Utipac, in which 14 founder members, all of which plan to be big users of Transpac — banks, Air France and so forth — hold shares, and in which any user can become a shareholder. The remaining 5 per cent of the shares are held by PTT employees.

The new big name in computers

Federal agencies budget for big expansion in spending on DP

EXECUTIVE branch agencies in the US Federal government are expected to increase their spending for general-purpose data processing activities from \$3,707 million in Fiscal Year 1977 to \$4,660 million in FY79.

Executive agency spending for DP activities during FY 78 was expected to total \$4,237 million. These and other statistics on Federal DP resources were compiled by the US Office of Management and Budget, based on data included in the 1979 budget of the US Government that was submitted to the Congress last January.

In the summary information, now released, the Management and Budget Office points out that the figures do not include resources for items such as "classified" DP activities; computers which are an integral part of combat weapons, space and similar systems; telecommunications associated with the transfer of data, as contrasted with the processing of data; and analogue computers.

OMB points out in its report that annual obligations for general purpose DP activities of executive agencies, which represent slightly less than one

percent of the total budget, continue to grow at about the same rate as the total Federal budget.

The OMB report points out that the number of computers owned and leased by Federal agencies for general purpose DP increased significantly during FY 77, from 3,903 to 5,000, and further growth is anticipated during FY 79.

The trend toward purchasing rather than leasing computers in the Federal government is continuing. At the end of FY 77 the government owned 79.3% of its general management computers and 97.6% of its special management computers.

Other trends in spending patterns show that the actual obligations for purchase and rental of computers continue to be less than the executive budget for these purposes.

The Federal DP workforce has remained relatively stable in the past decade. OMB says the increased workload has been met largely through increases in the purchase of commercial services for systems analysis, programming and computer operations rather than through increases in permanent personnel.

While the proportionate

amount of DP resources spent for commercial services had been increasing rapidly (from 23.7% of the total in FY 76 to 26.4% in FY 77), the amount spent for purchase of commercial computer time sharing services has not increased at the same rate as other types of services, Figure 1.

The most significant increase has been in the purchase of systems analysis and programming services (from 7.5% in FY 76 to 8.1% in FY 77) and in the purchase of operational support services (from 4.1% in FY 76 to 4.9% in FY 77).

The operational support services category includes contracts for the operation of government computer facilities as well as some contractor facilities which are dedicated to supporting specific federal agency work.

The most significant difference between Federal and private sector computer spending patterns in the US, OMB says, is that federal agencies spend proportionately more for commercial DP services and less for hardware than private sector firms, Figure 2.

For FY 77, the Federal government spent 28% of its total budget for outside services and 22% for hardware. The comparable figures for the private sector during the same year were 16% and 35% respectively.

For FY 78, the Federal government was expected to spend 28% for outside services and 23% for hardware, while private industry was expected to spend 17% for outside services and 35% for hardware.

Figure 1. This diagram shows the distribution of DP costs incurred by US Federal government agencies during Fiscal Year 77.

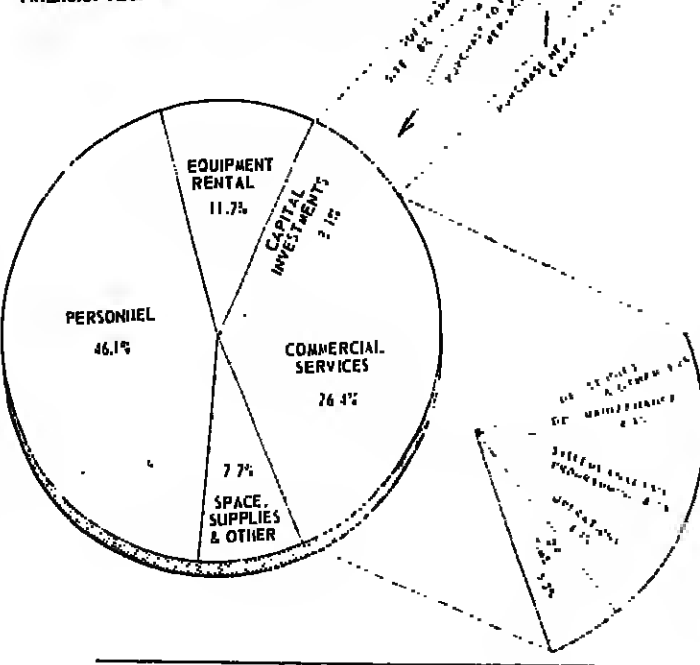

Figure 2. A comparison of Federal and private sector spending on DP in FY77 and FY78.

AT&T rival gets the go-ahead

AN appeal by AT&T over the supply of local telephone interconnections to MCI Communications Corp. of Washington, so that it can expand its long distance telephone service, is not to go to the US Supreme Court. The court has declined to review an earlier appeals court ruling that said the needed interconnections must be provided.

AT&T and the Federal Communications Commission had challenged the appeals court ruling in their quest for a Supreme Court review.

The Supreme Court's action marks the end of a three-and-a-half year legal battle over MCI's right to offer long distance service to its customers. MCI initially filed with local exchange facilities of the Bell System. AT&T had argued that MCI was not a private line service, which the specialised

common carriers are clearly authorized to offer, but rather was a long distance message toll service and wide-area telecommunications service. Such services were thought to be the assured territory of AT&T.

A district court ruled in July, 1977, that Executiv had indeed resorted to MTS and WATS services but added there was nothing on the FCC books that prohibited competition and the belief that those services were exempt from competition was merely an afterthought.

AT&T and the FCC have repeatedly appealed the ruling and have continually been rebuffed by the courts. The Supreme Court action gives MCI carte blanche to expand Executiv, pending completion of the public interest inquiry by the FCC.

More funds pledged for R&D

THE Carter Administration is committed to increased support of research and development in the US, both through Federal funding of R&D and through Federal incentives for heightened R&D activity in the private sector.

That promise came from Richard Atkinson, Director of the US National Science Foundation, in his keynote address at the annual meeting of the Association for Computing Machinery held last month in Washington.

During the past decade the US has "slipped dramatically" in its support of basic research, said Atkinson, and at the same time, other countries had boosted their R&D efforts.

Citing NSF statistics, Atkinson pointed out that the US spent 3.1% of its gross national product on R&D during 1965. A decade later, R&D as a percentage of GNP had slipped to 2.2%. Over the same period of time, the Soviet Union increased its R&D expenditures from 4.4% to 6.1% of GNP.

These figures, coupled with the fact that federal funding of R&D plummeted from 13% of the Federal budget in 1965 to six percent in 1976, point to "a sorry state of affairs" in the US, Atkinson said.

"Also, the more research and development you do outside the country, the less your tax bill will be," he added. "Now I think there's something wrong with that." It may be time to draft some Federal tax incentives for R&D activity, Atkinson said.

One plan to counteract the decline in R&D in the US was to pour more Federal funds into universities, with those funds earmarked for research in computer science. An increase in Federal grants for basic research in industrial innovation could also be expected, said Atkinson.

In 1977, only 300 persons graduated from US universities with PhDs in computer science. Another 2,800 persons obtained Master's degrees in that field. "This level in no way meets the needs of the country," Atkinson asserted.

WASHINGTON REPORT BY CAMERON DAVIS

Imports and exports increase

US imports of computer business equipment rose 43% to \$508 million during the third quarter of 1978. Exports from the US hit the \$18 million mark, a rise of 29.1% over the same quarter a year ago.

These figures, compiled by the US Department of Commerce, indicate a favourable balance of trade for the US computer business equipment industry: \$749 million, or a 20.2% increase over the 1977 third quarter.

Overall, the first nine months of 1978 showed a positive balance of trade of \$1,890 million for the industry. That represents an increase of 10% over the \$1,710 million reported for the first nine months of 1977.

According to Commerce Department data, US exports rose 26% during the nine-month reporting period from \$2,387 million in 1977 to \$3,020 million in 1978. Imports, however, increased a substantial 43% from \$1,160 million in 1977 to \$1,670 million by the end of the first three quarters of 1978.

Computers and related equipment, including parts, account for over 80% of the industry's export total in the first nine months. Broken down further, computers and related equipment exports for the period rose to \$1,188 million level, while during the same period in 1977 the figure was \$1,100 million.

The level of exports for parts for computers and peripherals for the nine-month period rose to \$1,188 million, but fell to the same three quarters level, while the level of exports had been \$1,100 million.

Imports of computers and related equipment rose 43% to \$1,670 million during the nine months of 1978, up from \$1,160 million for the same period in 1977. The figures on computer imports revealed a decrease from the first nine months of 1977, imports of computer hardware from the US, on the other hand, rose 48% from \$1,160 million to \$1,710 million in the first nine months of 1978.

A very significant increase in the production of copying machines was also noted. Imports rose 75% from \$1,160 million to \$2,020 million in the first nine months of 1978, up from \$1,160 million for the same period in 1977. Overall, the US trade balance for computer-related equipment and parts rose 18% to \$1,890 million in the first nine months of 1978, up from \$1,710 million for the same period in 1977.

S African 'threat to individual privacy'

From Eamond Frank in Johannesburg

RAPID advances in computer technology pose a serious threat to the privacy of the South African individual, warns André Botha, official spokesman for the Computer Society of South Africa. "The potential for the abuse of computer technology is clearly here," he says.

INTERNATIONAL NEWS IN BRIEF

Univac \$5m German order

TWO contracts for 1100 systems, each valued at \$5 million, have been received by Univac in West Germany.

The big Deutsche Beamtensversicherung insurance company wants to administer the 1.6 million policies that it currently processes on a Univac 1106, and the Energie-Versorgung Schwaben electricity company is getting a Univac 1100/12 for technical and administrative applications.

Arabian 'first'

BASED on a Digital Equipment PDP-11/34 processor and claimed to be the first online business system in the Arabian Gulf state, a Systime 5000 with 128K words of main memory and supporting 16 video terminals has been installed in Qatar. Customer is the Mammi Trading Company, which supplies vehicles, construction equipment and consumer durables, and offers a wide range of civil engineering services.

Supermarket soaks

US supermarket groups Winn-Dixie and Piggly Wiggly are to install NCR scanning systems to handle Universal Product Code marked goods in their branches. Winn-Dixie, which has 1,150 stores in the south of the US, has already converted 25 of them to scanning equipment. Piggly Wiggly, which is Bernina's largest supermarket chain, has installed 29 NCR 255 checkout terminals, 25 scanners and four 726 in-store computers at its four supermarkets.

Breakaway

INCREASING business has prompted Square One Data Corporation to break from its parent company, Square One Computer Services, and move into more modern offices in Chesham. New equipment consisting of Univac 1700 and 1800 card machines and an Inforex 1303 key to disc system has been installed to meet demand.

Name change

THE Information Terminals Corp., the US based manufacturer of magnetic tape cassettes, has changed its name to the Verbatim Corp. The company has used Verbatim as the brand name for its range of products for several years. Verbatim products are sold in the UK by Willis Computer Supplies.

\$3.9m contract

FOLLOWING an order from the California State Justice Department for two 1100/81s and two 90/80s to replace six Spectra 70 miniframes (CWI, September 14, 1978), the California state Department of Motor Vehicles has given Univac a \$3.9 million four year contract for two 90/80s for vehicle registration and driver licensing. One Spectra 70/8 will be replaced and the 90/80s will run alongside the other 70/8s and a 70/55.

computerised defrauding of business is definitely taking place in South Africa, but the full extent is not known.

"Because of the lack of publicity, the problem isn't coming to light. As a result, the perpetrators are not being apprehended and prosecuted."

Geoff Gnrwitz, a specialist in computer control, says that while technology for controls and security exists, it is not being applied.

He adds that while most computer frauds are perpetrated for financial gain, computer abuse is also involved in many industrial espionage operations.

Comments Dr Sulcas, "More of this type of crime will take place unless management exercises far greater supervision over the activities of computer departments."

"Computers," he emphasises, "have not taken over the world and can be controlled. Computers are as honest or dishonest as the people who feed information into them."

ICL France to double payroll

THE French subsidiary of ICL is performing at least as well as the company overall and, according to managing director Gerard Maillet, ICL France intends to increase its present turnover of over 350 million francs, £42 million, 2.7 times in the financial year 1981-82.

It also plans to double the number of people it employs to 2,000.

Talking to the French weekly Ordinateurs, M Maillet revealed that orders in hand stood at about 320 million francs, 25% higher than at this time last year. This growth compares with an industry average of 12 to 15%, according to Maillet.

Commenting on the growth plans, Maillet said that they were more ambitious than those set by the parent company for its total business, but were in keeping with ICL's policy of seeking particularly rapid growth in continental Europe.

● The ICL subsidiary Down Under has reported profits up 24% at \$48.2 million on turnover up 27% at \$48.5 million. The dramatic turnaround in the company's performance includes turnover almost doubled over two years, while 40% of the deliveries made in 1977-78 were machines for rent rather than purchase. There are now 14 2900s, from the 2850 up, installed in Australia, and another 20, worth \$25 million, on order. ICL Australia is the company's third largest overseas subsidiary, after South Africa and France, and just ahead of West Germany.

● ICL's Indian manufacturing

THE work of up to 30 draughtsmen can be handled by this computer drafting system developed at the University of Queensland in Brisbane, Australia. Some 100 users with its developer, Dr Michael McLenn, a lecturer in computer science, the system is based on a graphics display unit controlled by minicomputer. The software can carry out graphics processing like shading, zooming, lettering in

10 different type sizes and drawing thick, thin and dotted lines, circles, arcs and angles. The hardware configuration costs \$45,000 and also includes a graphics plotter and ndt drive. The software costs between \$12,000 and \$15,000. More information about the system can be obtained from Dr McLenn at Queensland University.

Growing Mid-East software demand

A FURTHER order from Kuwait for the MMS general ledger and financial reporting system has confirmed Package Programs' view that the Middle East is an increasingly significant market for software packages.

The latest order comes from Yusef A Alghannim & Sons, the main importer of General Motors vehicles, and follows a similar order from Gulf Air, the international airline.

PPL has also installed software in Iran, where a Teheran computer bureau runs PPL's payroll and personnel system to serve several British construction firms working in the area.

Noting the growth in demand, PPL chairman Roy Taylor commented, "Developing in-house software demands skilled specialist staff, not only are these people not available from the indigenous population but importing them is prohibitively expensive. There is only one way, and this is to buy a package off the shelf."

Munich debut

THE latest overseas company to be set up by the NRD's Compedi subsidiary is in Munich.

Compedi specialises in marketing high technology software systems for engineering and computer aided design applications. Its principal products include GADIE, a package for integrated circuit design, and PLIMS, a system for managing the design of complex chemical and industrial processing plants.

Meet the Peterborough People

Peter Brotherhood, precision engineers, moved here from The South Bank in 1906 to make way for London's new County Hall. My grandfather moved with them, and I'm continuing the family tradition. I trained as a toolmaker and now help sell products like these all over the world. I'm pleased grandfather came to Peterborough - I enjoy it. Roger Peltican

Find out about Peterborough now. Ring John Case. 0733-68931.

Simpact Systems expands in Holland and Australia

HOLLAND and Australia will be the next overseas operations centres to be set up by Simpact Systems Ltd, of Farnham.

The two new franchise operations will market Simpact's range of information systems management packages, including the Prompt project management system.

In Holland, the company will be represented by Simpact Nederland Bv, based at Amstelveen, near Amsterdam. The Australian operation, Simpact Australasia Pty, will be centred at Adelaide.

The new franchise agreements are the latest developments in a growing pattern of Simpact activity overseas. In southern Africa, the group is represented by Simpact South Africa (Pty), while in Italy there is an associate company, Simpact Srl.

Although Simpact has been trading as a group for only a few years, it has already won a number of prestigious customers for its products including BP, ICL, Texaco, Siemens, Honeywell Controls, Centrefire, and the Bank of Italy.

Phone phreaks claim to beat AT&T security

FOR some time there has been an argument about telephone tapping between the US telecoms giant AT&T and the phone phreaks, those persons who obtain unauthorised use of the telephone system (CW, November 9, 1978). AT&T says that it is impossible for outsiders to tap lines, while the phone phreaks say that certain exchanges make this easy to do — once you've got a blue box, the device that simulates the switching signals used by telephone company operators.

The technical term for the AT&T facility that permits operators to tap into a call is "autovivify." This feature is used, cautiously, by the telephone company to

enable operators to interrupt a call during emergencies or to determine whether a line is functioning properly. According to AT&T, autovivify facilities are designed with privacy in mind, and the procedures required of operators using autovivify equipment are strictly controlled and built into the phone company's equipment.

The phone phreaks contend, however, that the security features are inadequate. In many cases and the telephone equipment permits access to autovivify circuits from ordinary telephones through the use of a blue box. To prove their point, the phreaks have just published instructions for finding and using an autovivify circuit. The instruc-

tions were printed in TAP, the newsletter of the American technological underground.

According to the TAP article, some telephone company apparatus is subject to unauthorised usage. Certain telephone exchanges will connect operators — or phone phreaks — to autovivify circuits if they are reached via a tandem. A tandem is the computer used to control intercity and international telephone lines.

According to the TAP article, a phone phreak can determine the proper number sequence to reach an autovivify circuit by gaining access to a tandem and then testing out various prefixes — the

operator's equivalent of area codes — until certain signals are heard. The number that follows the code must be carefully selected to reach the autovivify facility. The TAP piece suggests that a phone phreak can afford to make mistakes while trying to connect to an autovivify circuit — after all, the calls are free.

Sometimes an autovivify circuit will stay connected for only a short time, according to TAP, and on other occasions the phreak will find that the connection he listens to is scrambled. But every once in a while the phreak will be able to listen in on calls through the supposedly secure facilities of AT&T.

Japan poised to win bigger markets

JAPAN's future in the computer business "is a central issue for the future success of the US computer industry", according to a leading US computer industry analyst, Gideon Gartner.

Gartner also believes that ongoing relationships between US suppliers of plug-compatible machines and Japanese manufacturers are just the first wave of Japanese penetration of the US market.

Gartner is the main computer industry analyst at Oppenheimer and Co, the Wall Street

stockbrokers. He has just visited Japan and believes that the Japanese will sell nearly twice as much data processing equipment in America as their official government forecasts indicate.

The official forecast calls for \$1.700 million in computer sales to the US by 1985, but Gartner estimates sales will actually reach \$3,000 million. This, he points out, will be 35% of the total volume of the Japanese computer industry.

Currently, Japan's computer manufacturers are selling

mainframes that compete directly with those made by IBM. So far, this is being done by arrangements between Japanese companies and US manufacturing or marketing organisations. Intel markets IBM-compatible mainframes made by Hitachi, for example, along with systems built by America's National Semiconductor. Fujitsu manufactures assemblies used in the production of Amdahl computers.

Other links exist between Japanese companies and

manufacturers of equipment that is not directly compatible with IBM's offerings. Examples of such arrangements include the pact between Siemens Fujitsu (which will yield machines similar to IBM products), technology exchange agreements between ICL and Hitachi, similar exchanges between Honeywell and both NEC and Toshiba, and financial ties between Univac and both OKI Electric and Mitsubishi.

The Japanese will not necessarily continue to restrict their

activities to partnerships with companies from other nations, however. Independent computer marketing efforts could follow the Japanese success in the microprocessor and memory chip business, the increasing sales of Japanese peripherals and the growing Japanese penetration of their office equipment markets.

Eventually, the Japanese may become strong competitors in a full range of data processing equipment and related products. This eventually, according to Gartner, confirms "the validity of IBM chairman Frank Cary's apparent preoccupation with Japanese technology and management acumen."

Nevertheless, IBM Japan remains the largest computer exporter in that nation, a fact that must concern native manufacturers.

The Japanese, who have already demonstrated their ability to develop hardware, must catch up in software if they are to become a major factor in the computer industry. Gartner states that the Japanese will soon be able to develop good software, although they cannot yet equal that of American companies.

However, Gartner expects the Japanese will try to use electronics in lieu of programming wherever possible. As software costs skyrocket, this strategy may pay off handsomely.

NEWS FROM AMERICA BY HESH WIENER

DEC gives 11/70 to museum

A TIME sharing system based on a PDP-11/70 has been presented to Boston Children's Museum, by Digital Equipment Corporation. The museum, which features exhibits that visitors can use, rather than merely look at, is already using more computer than any other American museum. The 11/70 will be coupled to the museum's older 11/45, now used to provide a series of programs and interactive exhibits that have been designed for more than five years.

The DEC machine is the largest single gift the museum has ever been given, and museum director Michael Spock said it would be "a coronation of our new headquarters." The museum is to move to a new waterfront location next July.

Spock, director of the Children's Museum, is a son of Dr Benjamin Spock, famous for his book on child care and for his active protests against the Vietnam war.

Among the applications for the minicomputer will be a public-access database of cultural events, maths games and self-instruction programs. Software will be based on the UNIX operating system developed for the PDP-11 machines by Bell Laboratories.

Progress has been made in developing a decision model for deciding whether distributed processing represents the best organisational approach for a firm in terms of meeting objectives and making optional use of hardware, software and personnel resources. MORRIS EDWARDS describes a preliminary model developed at the MIT Sloan School of Management.

ADVANCES in software and micro technology have removed many of the economic and technical constraints to implementing distributed processing systems. One major obstacle remains, however, and it deals with management.

Specifically, it is the lack of recognised guidelines for deciding if distributed processing represents the best organisational approach for a firm in terms of meeting its objectives and making optimal use of hardware, software and personnel resources.

Now, at last, some progress is being made in developing a decision model to handle this issue. Working at the Massachusetts Institute of Technology Sloan School of Management, Dr John Rockart, director of the Center

By Morris Edwards

for Information Systems Research, and his colleagues have developed a preliminary decision-making model based on interviews with more than 20 organisations and analysis of numerous other case studies.

While the model relies mainly on qualitative methods of evaluation, its framework could form the basis for a subsequent quantitative means of deciding the centralisation/decentralisation issue.

For his model, Dr Rockart divides the data processing functions into three processes: systems development, systems operations and systems management.

Systems development is defined as the process of designing and implementing new computerised systems; systems operations is considered the process of "running" the systems, including accepting current input, updating the appropriate files/databases and generating reports; and systems management is viewed as the setting of strategy, planning, establishing standards and simi-

Distributed processing: A model for decision

lar activities.

Since each process is an independent one, the decision to centralise or decentralise can be made independently for each, and Dr Rockart strongly recommends this approach. "We feel that an organisation should not decide at any one time whether to centralise or decentralise its entire information system function," he states.

He believes that a series of decisions should be made on individual parts of a firm's system. "In this way, several decisions can be made, based on detailed analysis of relatively independent subsystems. Handled in this manner, each decision can be fully researched and the logic of the decision clearly understood."

Systems development and operations lead themselves to this approach since the processes involved can be performed in disparate ways for different subsystems. However, the MIT team feels that systems

management, in contrast, must be viewed as an individual, integral entity, so the decision on how to manage data processing should be a single determination covering the entire organisation.

For systems development and operations, the MIT model breaks down the centralisation/decentralisation decision by grouping applications with common characteristics and requirements into Logical Application Groups, Figure 1.

"Because LAGs are relatively independent in both data and areas of concern, it is possible to treat each one separately," explains Christine Bullen, assistant director of the Center for Information Systems Research.

The final partitioning of the decision deals with organisation structure. One LAG may concern several sub-units, and when these differ in nature and characteristics, a separate decision can be made for each. Having gone through these

steps, one can determine how much centralisation or decentralisation is appropriate for a specific systems management process for a defined group of applications within a chosen organisational sub-unit.

The decision is made by developing alternative hardware and software configurations and evaluating them in terms of cost, time and effectiveness. To limit the range of alternatives, however, Ms Bullen recommends first determining the "effective range of solutions."

For this determination, systems development and operations are further divided into sub-processes and resources. For instance, systems development encompasses four major sub-processes, or activities: functional design, detailed specs and programming, implementation and maintenance.

"It is not necessary that each sub-process be centralised or decentralised to the same extent," Ms Bullen notes. "Yet, these sub-processes are inter-related and must be considered in conjunction with each other." For systems development activities, the major resource is considered personnel, since items such as equipment and budget are far less critical.

For systems operations, the sub-processes are editing and control, updating, processing and reporting. Hardware, software and personnel are defined as one major resource since all must be centralised or decentralised together; the second major resource is the organisation's database.

Within the MIT model, decision tables are used to specify the sub-processes and resources involved in each decision and to graphically represent the range of alternative configurations appropriate for each.

The second decision-making tool, and one of the more innovative elements of the model, is a "factor table," which is based on the notion that certain universal conditions or factors influence the decision toward or away from centralisation.

From their empirical studies, the MIT team found the major factors influencing the centralisation/decentralisation decision include the characteristics of the organisation, its

data processing department and sub-units, and the characteristics of the LAG and its processing phases.

In the factor table, the first two columns identify the organisational or functional level to which a set of factors apply and the factors themselves. The next column indicates the direction which the factor implies (centralisation or decentralisation) and the strength of the factor. Finally, the last set of columns indicates the sub-processes or

implement it; and its effectiveness.

Having determined the effectiveness of solutions for a basic unit, the decision-maker is in a far better position to generate the alternatives for evaluation.

Overall, in their case studies of numerous organisations, the MIT researchers have found a major trend toward distributed processing created by application-related factors which favour decentralisation.

	SYSTEMS DEVELOPMENT	SYSTEMS OPERATIONS

• Interaction with centralised application data sets	<input type="checkbox"/>	<input type="checkbox"/>

Figure 2: In this simplified factor table, squares indicate factors favouring decentralisation, while circles represent factors favouring centralisation. How strongly the factor impacts the overall decision is represented by large and small figures. With critical factors, the circles or squares are filled in.

resources to which each effectiveness factor applies, Figure 2. Usually, a circle is used to indicate a factor that favours centralisation, with a square representing factors favouring decentralisation. Similarly, the strength or weight of the factor is indicated by large and small circles and squares. Finally, for critical factors, the circles or squares are filled in.

In the final step, the alternatives are evaluated using three major performance measures: the cost of performing the process; the time to develop and

• Firms interested in working with the MIT team on this project should contact its director, Dr John F. Rockart at 59 Memorial Drive, Cambridge, Ma. 02139.

Your computer training can be plain sailing.

Particularly with DIGITAL's Educational Service Organisation. With decentralised training centres that bring education nearer customers and by using up to date educational technology DIGITAL is able to offer a service expected of the industry leader....second to none.

can start any day of the week throughout most of the year.

Educational packages have been designed to suit particular needs, allowing individuals to proceed at their own speed so that they gain maximum benefit from the facilities.

The courses provide considerable advantages for organisations who are either up-grading or purchasing a computer for the first time. Staff can be trained before the computer is installed so that computer time will not be wasted once it is ready to run.

To support the course, highly qualified teaching staff will be on hand to offer personal instruction.

The Education Centres are fully equipped with the latest Digital Equipment computer systems and terminals and all courses include extensive "hands on" laboratory time. Courses begin JANUARY 1st 1979.

This compares with maximum online file capacities of over 1 billion bytes on both Honeywell's Level 8 and DEC's DS 500 series. The ICL 2904/50 is limited to a current maximum online capacity of just over 500M characters, but a fully machine code compatible ICL 2958 mainframe running under DME-2 could offer up to 3,600M characters of online disc storage.

ICL, Honeywell and DEC offer even greater database expansion capability on the larger 2900 series, Series 80 Level 86, and DECsystem-20 mainframes respectively. Upgrading to these systems will involve, in all cases,

FERRANTI

INTERNATIONAL NEWS IN BRIEF

CDC scores in France

UNDERLINING the potential of the large-scale Control Data Cyber 170 series mainframes in commercial as well as scientific applications, CDC has scored a major victory over NCR in France. The regional agricultural credit bank in Bouche-du-Rhône is to replace its NCR Century 300 mainframe with a dual-processor CD Cyber 174.

Yugoslav contract

A MAJOR contract for NCR Criterion 8500 mainframes has been placed by the Associated Commercial Bank of Sarajevo in Yugoslavia. The order includes nine Criterion V-8500s, 151-8250 smaller business computers, 530 counter terminals and 140 back-office terminals, to be installed throughout the bank's 22-branch network. The system is to handle customer accounts, foreign exchange and loan processing.

Korean distributor

DISTRIBUTION of the Honeywell Level 6 line of minicomputers in Korea is to be handled by Gold Star Co. of Seoul, the company which recently entered a joint venture with American Microsystems, under which AMI will design integrated circuits for use in Gold Star electronic entertainment and domestic appliance products (CW, August 10, 1978).

In-house software

JAPANESE computer users are increasingly resorting to in-house application software development. In survey conducted by the Japanese newspaper Nippon Keizai Shimbun, 236 large Japanese companies were polled and 72 per cent said that they now developed their software in-house, and the average Japanese installation now employs 150 computer-related personnel, including 74 programmers and analysts.

DG profits up 42%

IN the year to September 30, 1978, Data General made a net profit of \$40 million, up 42 per cent, on turnover up 47 per cent at £380 million compared with the same 12 months of 1977.

COMPUTER WEEKLY INTERNATIONAL

Major expansion of DP space at Hanover

A MAJOR expansion of the exhibition space for computer equipment is under way in preparation for the 1979 Hanover Fair. The CeBIT section of the show, which houses office and data technology, will occupy three halls instead of the usual two. The additional location is Hall 2, which joins the enormous Hall 1 and the smaller Hall 1B. All three will be linked with first floor level covered walkways.

Powerful line-up of mainframes for plum Australian contract

THE world's most modern and most powerful general purpose mainframes are lining up to compete in a re-run of the contest for the Australian Bureau of Statistics. Fujitsu won the contest last time around, but had the prize snatched away following lobbying of the government by IBM Australia — an outcome exclusively forecast in Computer Weekly International (November 10, 1977).

The contest is a particularly significant one, because Australia is the only developed computer market where all the world's major mainframe manufacturers apart from Siemens compete head-to-head. However, there is some doubt about ICL putting in a bid. A spokesman said that the company would not spend on making a bid unless it felt it stood a good chance of winning. NCR is also not expected to bid, the main reason being that its new 8600s will not be ready in time.

The new tender specification is for equipment worth \$A20 million, about £12 million, to replace the Canberra-based bureau's CDC 6600. The requirement is for a minimum two processor machine with about 10 Megabytes of main memory, 20,000 Megabytes on disc, and an on-line bulk storage system with at least 168,000 Megabytes of storage.

The ability to upgrade the installation is a key requirement, and both IBM and Fujitsu will be offering machines not available at the time of the M-100 last time, and IBM the 168. Fujitsu should still have the edge in that the M-200, being available in configurations up to four processors, is more flexible than the IBM 3033, which comes with one or two CPUs, and offers no cost advantage in the dual processor

space, most of which will be housed in Hall 1B. The other main feature of the show this year will be the automated office. A joint presentation by all CeBIT exhibitors designed to "reduce the disquiet" among members of the general public about the widely forecast revolution in office methods and systems. According to the organisers, the beneficial changes in "social, income and working conditions" will be stressed.

The show opens on Wednesday, April 18 and closes on Thursday, April 26, 1979. The organisers are investing 30 million from

MEGALEASING

Additions to Modcomp line on the way

AT the last count, Fort Lauderdale minicomputer Modcomp had sold 75 of its new Classic 7800 line of minicomputers, 30 per cent to customers new to Modcomp. Two of these, Honeywell and Harris, have competing minicomputer lines of their own.

According to president Ken Harple, further additions to the line will be made shortly. There are currently three models, the one Megaword 7870, the 7880, and the compact 7810.

Modcomp is currently being wooed by two unnamed companies — a large multinational wanting to acquire the entire company, and a private US company wanting a 20 per cent stake.

Gybers for Finnish weathermen

WEATHER forecasting on a global scale will be improved shortly by the acquisition of a Control Data Cyber 171 and two Cyber 18-20 minis by the Finnish Meteorological Institute.

The 171 will run a large scale weather prediction model which will be linked in via the links to the World Meteorological Organisation's network. Eventually it will be connected to the planet Cray 1 system at the European Medium-Range Forecasting centre at Shiffield Park, Berkshire (CW, January 12, 1978).

Eclipse system aids oil search

The largest model in the Data General Eclipse line, an M/600, has been installed by the Woodside Petroleum Development Pty in Perth, Western Australia, to take over the on-line digitising and plotting of seismic data collected from the North West Shelf in the Indian Ocean. The shelf is a source of both oil and natural gas, and the processing work was previously done at several computer bureaux. Our picture shows operations on board the Woodside derrick, in the Indian Ocean.

Asian scripts on Tally printer

A PRINTER specially designed to produce Middle Eastern and Asian scripts has been introduced by Tally. Called the T5000 Expanded Matrix printer, it is a modified version of the established T5000, and uses the same helix and hammer print mechanism.

The difference between scripts like Farsi and our own alphabet is that the characters are linked together, and the shape of these links affects both the meaning of words and the grammar. This linking means that devices which print clear-cut characters can only handle a limited range of meanings.

Carter crackdown on cheats

PRESIDENT Carter and members of his cabinet have expressed warm praise for three US government projects that are tracking down cheating and fraud against welfare programs by matching up personal records on separate computer systems.

According to the President, many millions of dollars are already being recovered from the estimated \$7 billion lost annually to welfare cheats, dishonest doctors and pharmacists, and defaulter on student loans.

Helsinki \$6m order for Univac

KESKO OY, the Finnish wholesale corporation, has installed a Univac 1100/82 to handle its inventory control, warehouse operation, and statistical work and forecasting applications.

Valued at about \$6 million, the order was placed with Oy Saab Univac AB and the 1100/82 is

printed portraits. New character sets can be specially produced at a cost of a few hundred pounds in a few weeks. They are stored within the printer on a read-only memory.

The T5000 Expanded Matrix printer will be sold to end-users for less than £5,000, with discounts for quality orders.

Although specially designed for the Middle East markets, the qualities of the printer make it suitable for almost any alphabet, and also for graphs, music or

New Year - New Jobs

A paradox of the present levels of unemployment is that the DP industry is crying out for livewares. In this article, Computer Weekly International Editor Tim Palmer suggests that one of the reasons for this is the lack of a clear-cut path to a DP career, which probably starts with lack of information at the school

careers adviser level.

He says the New Year is a good time to take stock of one's lot and consider looking elsewhere. On this point, Palmer urges job applicants to look beyond big salaries — these can be taken for granted — and consider what else a new job can offer.

Now is time to ask: 'Am I being paid enough?'

AT a time when all the forecasters agree that unemployment is more likely to rise than to fall in the medium term, the computer industry presents a striking paradox: why is it — at a time when so many people are looking for jobs in an occupation apparently well paid, not demanding a long and complex education and attractive in terms of status — so chronically short of staff?

One of the reasons clearly is the very informality of the computer industry: there is no clear-cut educational path that leads to a career in the computer industry. At any DP managers' convention, accountants rub shoulders with physicists, classicists with electronic engineers.

The universities were slow to offer computer courses and, when they did, acceptance was hampered by a general feeling within the industry that on-the-job training was more valuable than formal education.

This is no longer true, and the colleges which offer computer courses are now turning out graduates capable of being usefully employed almost as soon as they start.

But old prejudices die hard, and the last person to hear about changes in the profile and requirements of the employment market is lamentably often the man or woman added with the title of careers adviser in addition to his or her normal duties.

The fact remains that the requirements for entry into a computer-related occupation are so open and ill-defined that the case for a computer career often goes by default.

Yet the requirement for people capable of applying the microprocessor promises to make even worse the already dangerous shortage of skilled computer people. In the short and medium term, the shortage is beneficial to those already in the industry; in the long term it spells potential disaster.

Computer manufacturers, waking up to the problems users encounter in finding, and meeting the cost of, trained staff, are going all out to make computers easier to use, and more significant, easier to program.

The plummeting cost of hardware is making this a more and more cost-effective approach to the problem, but its long-term effect will be that fewer skilled analysts and pro-

grammers will be required. Systems may be more efficient, less elegant, but their overall cost will be lower.

The New Year is a time for resolutions, new beginnings, a period for reflection, for re-examination of motives, needs, desires, requirements. A time to ask difficult and self-searching questions — and a time when many people think seriously about looking for a new job.

Most of us flip idly through the concept of job opportunities which bounces onto the doorman with such profligacy each Thursday: Am I being paid as much as I am worth? Could I apply my skills and experience in a more challenging and profitable way?

Now is a splendid time to

ask those questions in earnest, to seek fresh woods and pastures new, and this week's crop of job opportunities is well up to standard.

But if, as computer professionals, we accept the fact that the desperate shortage of trained people threatens our own careers by hearkening to the servant master, which machine assumes the power to make us redundant. It is incumbent on us to ask prospective employers more searching questions than is usual.

In our highly-taxed world the fringe benefits, the assistance with removal expenses, help in finding somewhere to live are all vitally important; but, in the seller's market in which any computer person worth his salt resides, they can be taken almost for granted.

But what is the prospective employer doing about helping to solve the problem of too many jobs chasing too few people?

FIVE REGIONAL COUNCIL FINANCE DEPARTMENT

COMPUTER PROGRAMMER

Salary: £3933/£4481 plus £312 sup.

Qualification required — at least two years' COBOL experience. The Region has an ICL 1903A configuration, but this will shortly be replaced by an ICL 2980. A wide variety of work is undertaken and career prospects are excellent.

Application form (returnable by 20.1.79) and further information from Regional Office, Finance Department, Five House, North Street, Gloucester (Tel. Gloucester 754411, ext. 245/8). Please quote reference RP/48/442/CW.

UNIVERSITY COLLEGE HOSPITAL

COMPUTER OPERATOR

There is a vacancy in the Chemical Pathology Department for a Computer Operator to work on the data processing of an on-line Laboratory Computer System which is undergoing further development. The system is based on a Modular 1 computer with disc backing store and multiple terminals. The job offers considerable responsibility and the successful applicant will be expected to be able to work to time schedules and to adopt a disciplined and professional approach to his/her work.

Applicants should preferably have experience of computer operating in a teaching environment. Basic salary (28 hours week) within range £3,225-£3,805 inclusive of London weighting. Application forms and further information can be obtained from the Personnel Department, University College Hospital, Gower Street, WC1E 6AU Tel 01-253 7900 ext. 381. Closing date: 15th January, 1979.

MULLENS & CO.

Stockbrokers, using an ICL 2960. Current work load predominantly under 1800 DME. New systems are being developed for General Office, Investment and Research departments using DMS, TP and MAC under VME/8.

Vacancies exist for:

SENIOR SYSTEMS DESIGNER

From £8,500. Experienced in designing large systems, leading project teams and dealing with users.

SYSTEM ANALYST/PROGRAMMER

From £7,000. To assist with new project and maintenance of existing systems. 2-3 years' experience with PLAN essential. COBOL and/or FORTRAN knowledge appreciated.

PROGRAMMERS

To work on new projects. From £4,000. Minimum experience of 12 months in either COBOL or FORTRAN.

TRAINEE OPERATORS

From £2,500. Two-shift working with occasional overtime.

THE FIRM OPERATES A BONUS SCHEME FOR ALL STAFF

Application to — O. P. Manager
Mullens & Co., 15 Mansgate, London, EC2R 6AN.
Tel: 01-638 4121, Ext. 279.

SENIOR PROGRAMMERS

Leeds £5,000-£5,500

Senior Programmers are required by our client to augment existing teams working on major new systems developments.

Advanced hardware is installed and wide use is to be made of database, on-line and real-time techniques.

To be considered for these outstanding opportunities candidates should have three to four years COBOL experience.

Interested? Call Ivor Norton quoting reference CW/79003.

MYRIAD

SALES SUPPORT

£5000 to £5500

SENIOR PROGRAMMER

£5000 to £6000

EUSTON

A large international organisation with Computer Centres throughout the world is seeking additional Sales and Programming professionals. Operating from six Data Centres in England, Scotland and Ireland, the Company, formed in the USA in 1963, entered the UK market in 1967 with a single mainframe and has grown in both size and services over the last eleven years to become a multi-million pound turnover operation.

Each Data Centre markets a wide range of services in both the commercial and technical application areas. Software tends to fall in three main categories, customised, package and information retrieval systems, running on Univac mainframes with terminals; front end processors and batch working being offered to Clients.

SALES SUPPORT

Engineering Applications

This vacancy presents an excellent opportunity for an Engineering Graduate with some industrial experience and enthusiasm who wishes to move into Sales Support. The position involves assisting "front line" salesmen in new prospect situations as well as maintaining and expanding the existing Client base — applications areas include civil, structures and electronics engineering.

SENIOR PROGRAMMER

To augment a small support team of technical specialists. This role will involve a degree of training in the Company's packages together with extensive applications software development for a wide variety of Clients. Applicants should have at least two years' COBOL experience, ideally with computer experience of either Univac or other large mainframe computers.

The Company offers an attractive modern working environment together with season ticket loans and excellent opportunities for career progression.

Project Manager

Central London

circa £9,000

A requirement has arisen for an experienced Project Manager to take responsibility for systems development of a Sales and Stock Accounting project in the operating company of an extremely large and diverse manufacturing group. The company is currently developing an extensive range of both real-time and batch distributed database systems, based on a network of PDP-11/70's and an IBM 370/138.

Applicants must have depth of experience in project management commensurate with the ability to control a major development project and a team of highly motivated professionals.

This is a positive opportunity to work for an excellent organisation where career prospects and the employment package are considered to be above average.

Contact: Margaret Stevens

Support Analysts

West of London

neg to £7,000 + car or allowances

If your present responsibility is to implement commercial systems and you feel that the next challenge is to join a sales support team then our client is currently able to offer such a position. The company manufacture mini computers and has enjoyed a steady growth over the last few years, a pattern which is expected to continue into the future. This position requires that candidates have a good grounding in basic d.p. disciplines as the company market a wide range of both tailor made systems and standard packages for general commercial usage. The successful applicants will be able to work on his or her own initiative, and will be happy to fit into a small and friendly team.

Career prospects are dependent on the success of projects and resulting expansion.

Contact: Mike Crenner

Inter-Computer Communications

Cambridge

£6,000-£8,000

Applicants of degree level in Computer Science or Electronic Engineering with at least 3 years project experience in a University or industry are invited to consider this well established company of specialist consultants and systems designers.

Project management potential, an interest in word processing systems and a thorough proven ability in writing Assembler are required. Necessary ingredients of the consultant status will be self motivation, an innovative nature and a business-like approach with clients at all levels.

Attractive salary package and achievement bonus is offered to employees.

Contact: Mike Crenner

For further information on any of the above vacancies please contact the appropriate consultant.

If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

JAMES BAKER ASSOCIATES, International Personnel Consultants
16 Maddox Street, London W.1. Tel: 01-491 4478

PDP Programmers

London/Home Counties

£6,500-£9,000 + Expenses

This client is a city-based software house which is continuing to attract development projects from a prestigious and growing client base. On joining their team of Consultants, Analysts/Programmers with a good knowledge of RS/TS/E and BASIC + (and possibly MACRO-11) will have the opportunity to significantly contribute to the growth and expansion of this still small and versatile organisation. Self-motivation and the capacity for hard work and commitment will be extremely well rewarded both financially and in terms of increased responsibility and status.

Basic salaries range from £5,000 to £8,000 according to experience, with bonuses and profit sharing providing around £1,500 p.a. extra. Each Consultant has the chance to earn a stake in the company.

Contact: Andy Wright

Support Programmer/Designers

Edgware, Middx

£6,000 to £8,000 +

These positions require experience of ASSEMBLER programming, preferably gained on mini or micro systems, and a good knowledge of commercial applications. The company is doubling the size of its customer support team in order to cope with the ever-increasing number of orders for its micro-based turnkey systems.

The job involves advising clients on their requirements, developing proposals, designing and writing systems, installing and setting up the completed systems, and training customer staff. A full consultancy role for self-starters with ambition and drive.

A company car could be one of the benefits—an exciting opportunity in this new area of the market.

Contact: Andy Wright

Business Systems Consultant

South London

up to £7,500

Our client, one of the major computer manufacturers in the UK, has opportunities for Business Systems Consultants to join a pre-sales team based in South London.

Applicants should have at least four years experience in data processing with the majority of that spent in the design and implementation of commercial applications. Candidates should have undertaken feasibility studies and been involved in defining user department requirements. The Company is looking for staff with maturity, sound business background, diplomacy and the ability to meet objectives with minimal supervision.

Excellent salaries, car allowance and bonus scheme.

Contact: Jim Baker

Team Leaders

Development of Simulation and Instrumentation Systems.

Marconi Radar is a leader in the field of sophisticated simulation, instrumentation and associated electronic systems.

A major expansion programme in this area has created several excellent opportunities for experienced team leaders in software engineering and in electronics.

Software appointments are being made in the very high technology field of computer generated imagery in which the software and electronics are developed together.

Senior electronics appointments are also to be made, both in CGI and in the simulation group responsible for operator and team trainers.

These positions carry attractive salaries and other benefits which include assistance with removal expenses.

You will find Leicester a thriving city surrounded by delightful countryside and where housing is still very reasonably priced.

Male or female applicants should send brief career details to:

Nick Donovan, Personnel Officer,
Marconi Radar Systems Ltd.,
New Parks, Leicester, LE3 1UF.
Tel: Leicester 871331.

SALES EXECUTIVE: MANCHESTER

Data Logic's Professional Services Division has over 300 consultants, analysts and programmers — providing creative solutions to practical computing problems. We are growing very fast: in size, in reputation and in the breadth of our computing assignments. We intend that growth to continue.

Our projects cover the country. Our largest regional office is in Manchester, where the client list and prospects match the dynamic progress of the Division as a whole.

We are looking for a top Sales Executive, to be based in Manchester and cover the

North. He or she will sell consultancy, software and total systems based on minicomputers. Our technical staff will provide the necessary support. The Sales Executive will have to supply the energy, the coordination and the marketing knowhow. Initial remuneration will be £10,000 or over, plus a company car and other benefits. Future remuneration will depend on results. For the right person it could be considerable.

Software sales experience is essential. Experience of OEM systems sales is highly desirable, from either the manufacturer or the system supplier side.

PROGRAMMER/ ANALYST

SOUTH MIDDLESEX

£5000

If you have gained one year, or thereabouts, COBOL programming experience, you may now be seeking your first move into systems analysis. This position represents an ideal opportunity for an enthusiastic person to gain comprehensive problem-solving experience in a highly user oriented role within a progressive installation. Extensive use is made of on-line programming and data communications to develop sophisticated systems.

A background on any manufacturers' hardware will be acceptable since full training is provided. A first-class sterling salary and valuable fringe benefits make this a highly beneficial career move.

Ref. SW1/1101

SYSTEMS ANALYSTS

SLOUGH

£6000-£7000 +

If you would like a more senior role in systems analysis than our client could offer you that move in a progressive environment.

The company is a large national commercial organisation. Analysts and Senior Analysts are required now to augment our client's expanding development team. Current hardware comprises an IBM 370 running under DOS/VS with on-line and database capabilities.

Candidates should be able to demonstrate proven project control and implementation experience, preferably combined with a programming background. They will be given the opportunity to work with the design and development of extensive teleprocessing systems.

The excellent starting salaries offered will be further enhanced by the extensive company benefits and the opportunity for good career progression.

MOVE TO IBM

SURREY

TO £5500 + BENEFITS

COBOL PROGRAMMERS

If you can offer two years' COBOL gained on any machine and would now like to enhance your career at one of the most up-to-date IBM sites in Surrey, then our client can fulfill your wishes. Operating large mainframes, supporting on-line program development, they are seeking to recruit programmers for their project teams working on a variety of interesting systems. The company is ready to release extensive development plans to ensure their competitiveness well into the eighties. Full training will be given and the successful applicants can look forward to possessing an in-depth knowledge of IBM OS JCL and being conversant with Assembler.

The total benefits package is considerable and the air-conditioned offices are very accessible by road and rail from most places in N.E. Surrey.

PROGRAMMERS & ANALYST PROGRAMMERS

BEDFORDSHIRE

To £7000

Our client, an international organisation successfully marketing personalised communications equipment has recently embarked on an exciting programme of computerised development.

Following the installation of an ICL 2800 computer, the initial task has been the implementation of extensive financial and accounting systems for Head Office. It is now intended to link ancillary branches and associated companies to the installation to provide an on-line information service and subsequent interactive processing network.

Both programmers and analyst/programmers who have a minimum one year's RPGII experience are required to join a team developing new corporate systems with mini and micro interfaces.

Open from excellent salaries, four weeks' holiday and company pension scheme, the company also offer a bonus scheme and relocation expenses.

Ref. N2/1101

MYRIAD

SENIOR SYSTEMS ANALYSTS

N.W. LONDON

TOTAL SALARY £7000-£8500

These positions will be filled by experienced Analysts who are capable of managing a systems project team through all phases of development. Teams comprise up to twelve staff and the Senior Analysts will usually report to Project Leaders or a Systems Manager.

Being primarily responsible for in-depth investigations of user requests, the successful candidates will possess the ability to express themselves clearly and concisely at middle-management level.

With systems specifications accepted, the Senior Analyst will become responsible for defining major areas of the system and he/she will continuously assess project requirements for each phase of development. Progress is monitored regularly and specifications will be updated to meet changing needs and new technical innovations. Certain projects will involve multi-national applications so all senior personnel will become familiar with company standards and policies which are strictly adhered to.

CONSULTANT ANALYSTS & PROGRAMMERS

to £8,000 + Benefits
AMERSHAM, LONDON and Home Counties

Our client, Square One Computer Services Ltd., is currently recruiting additional experienced Analysts and Programmers for a number of new projects throughout London and the South East.

The Consultancy Division requires staff to work with mainframe computers on the full range of commercial applications from small batch projects through to large on-line database systems. The work is carried out at client installations throughout London and the Home Counties. Applicants must therefore be prepared to travel to different locations. Travelling expenses will be paid between home and the client site. Analysts should have a broad commercial background. Programming applicants should have experience in COBOL, PL1 or MK4 on mainframe equipment.

The Mini Applications Division requires Analysts and Programmers at all levels to work on mini computer projects. This Division is based in Amersham and Chesham, Bucks, primarily using Hewlett Packard and Data General equipment. Good commercial experience on any mini machine using COBOL would be ideal.

To apply for these positions, or for an informal discussion, please ring Clive Wright on 01-242 9356 or write to the address above, quoting Ref. 491/CW. If it would be more convenient to telephone in the evening, or during the weekend, ring East Ginstead 03422 22270.

Square One will be holding an open evening in London later in January, to which all interested applicants are invited. Please watch this paper for further details or ring Clive Wright on the above number.

AUCKLAND NEW ZEALAND

APPLICATIONS ANALYSTS
PROGRAMMER ANALYSTS

IOAPS is an independent bureau specialising in insurance, finance and manufacturing distribution. Founded in 1970 as the data processing arm of the New Zealand Insurance Group it is now one of New Zealand's most respected data processing organisations. IOAPS attributes a success largely to their people, secondly to their specialisation and thirdly to their policy of keeping in the forefront of information technology.

The equipment comprises an IBM 370/148 in Auckland and a 370/135 in Wellington. A communications network links the company to 18 centres throughout New Zealand. Their main programming language is COBOL.

They require a number of applications analysts and programmer analysts for their Auckland centre. A background based on IBM equipment and methods is an essential requirement. Candidates will be ideally in the 23 to 35 age group and will wish to settle in New Zealand.

Your rewards, as may be expected from a successful people company, will be a fully competitive New Zealand salary £65,000 to £8,000 per annum, reviewed after 6 months plus excellent fringe benefits. These, plus financial assistance with relocation, will be detailed at your interview.

Prescot Computers specialise in recruitment to New Zealand and are assisting IOAPS in this assignment. Interviews by Prescot and/or a senior member of IOAPS will take place throughout January. We would prefer to interview you in your own locality if this can be arranged, and would therefore like a quick response from you. Please telephone Ched Bishop at 01-242 2142 or, if you prefer, write to him at:

Prescot Computers Limited

ALBERTA - CANADA

SENIOR SOFTWARE SPECIALIST

Do you want the opportunity to apply and develop a wide range of skills and expertise? This rapidly changing and growing environment will provide excellent career and challenge as illustrated by the variety of duties. Evolution of new software, assistance in system and program insurance reviews, technical support to analysts and operations, and maintenance of existing software.

This is a senior position and candidates will be expected to have:

- A background in operating system installation and maintenance
- Communications network experience
- Working knowledge of an Assembler level language
- Cobol experience in a business environment
- A university degree in data processing or equivalent experience
- The ability to work independently and as a team member or leader in an environment which demands excellence in product and service

Our environment is an IBM 370/138 data-orientated system with the accent toward terminal network development.

Preference will be given to candidates with knowledge and experience pertaining to DOS/VS, CICS/VS and VSAM.

Starting salary 20,400-28,000 dollars negotiable depending on qualifications and experience. It is combined with an excellent package of benefits including a generous relocation allowance and free medical and dental insurance plans.

We are an insurance-type organization with an annual income of over 180,000,000 dollars. We are Edmonton based in Alberta - a province with a rapidly expanding economy in the midst of a flourishing petro-chemical industry.

Applications, providing details of education, experience and expected salary, should be forwarded airmail, to: Director of Personnel, Workers Compensation Board PO Box 2415, Edmonton, Alberta, Canada, T6J 2S6.

ANALYST/ PROGRAMMERS

MOORGATE £5,000 - £7,500

Our client is the major multi-national supplier of NETWORK SERVICES; because of the continuing growth within the UK, the central implementation group has additional staffing requirements at all levels. All positions offer:

- ★ PROJECT PARTICIPATION FROM DESIGN TO HANDOVER
- ★ UK AND INTERNATIONAL APPLICATIONS
- ★ FLEXIBILITY OF HOURS
- ★ EXCELLENT TESTING FACILITIES VIA TERMINALS
- ★ ADVANCED SOFTWARE WITH PROVEN TECHNICAL SUPPORT
- ★ MODERN OFFICE FACILITIES

As they provide continuous training utilising modern educational facilities, re-inforced by extensive departmental experience, they are seeking Analyst/Programmers with 18 months' to 4 years' experience with high level languages on any hardware.

For further information please telephone **GEOFF MARSH** on 01-499 4501.

SOFTWARE PROGRAMMERS

to £8,000 + Relocation

MICROS IN THE HOME COUNTIES

One of the world's major corporations have been involved in creating a new generation of high technology Voice and Data Communication Systems. The 1980's will see a radical change in our public and private telecommunications facilities.

To make this change happen generic software has been designed to control these multi-microprocessor based computer systems.

Technically, you should be able to demonstrate a knowledge of block structured high-level language. Additional knowledge of low level languages, man-machine interfaces and real-time communications procedures would be particularly well received.

Successful candidates will be secure in the knowledge of a high salary range and more senior people can now receive the rewards their experience deserves.

Why not call me, **GEOFF MARSH** on 01-499 4501 for more details and a confidential discussion.

RURAL BUCKS. OR CITY

ANALYSTS AND PROGRAMMERS

to £7,500 + Benefits

A young dynamic Systems House with several U.K. offices, is looking to 1979 as its third successive year of growth.

Until now all of its systems have used Mini computer hardware, however, in keeping with its style they will be diversifying into new markets in 1979. This continued growth is thus your opportunity to move into the latest software and hardware technology.

Analysts who can demonstrate a commercial systems background on Minis, particularly PDP 11s, and Programmers who possess a sound knowledge of BASIC are the technical requirements. Equally important is the ability to work in a team environment to tight deadlines with some of the most professional people around.

Rapid career progression based on merit, will be to Technical Consultant or Project Management positions.

Don't miss this opportunity — phone me, **GEOFF MARSH** on 01-499 4501 NOW

Ref: RW 2/3

SOFTWARE ENGINEERS

to £8,000 + Relocation

One of the world's major manufacturers of Hardware Systems are seeking to augment their existing team of Software Engineers with both senior and junior programmers.

Working on the very latest Mini and Micro Hardware successful candidates can look forward to a rewarding career initially in one of these two areas:

★ Operating Systems ★

★ Data Communications ★

Both of these areas call for low level programming skills and individuals will be expected to demonstrate their ability in identifying problems and in proposing and executing their solution. Your future is secured with a manufacturer committed to staying at the forefront of technology.

Call me, **GEOFF MARSH**, on 01-499 4501

PERMANENT ESSEX

Systems Analysts

c £6.5

Our Client, currently developing Real-Time MIS systems, is looking for good Analysts to help enhance their current developments using a cluster of Univac kit. Should you wish to enlarge your experience with on-line Real-Time experience, please do not hesitate to phone.

1C419

Senior Analysts

c. £7k

A large manufacturing and wholesale Company is seeking persons with sound analysis experience to develop and enhance the business. Backed by a large IBM configuration, these opportunities provide you with an excellent chance of furthering your career immediately. For further details phone now!

2C419

Analyst/Programmers

c. £6.5k

If you are seeking variety, a dynamic working environment, fast career progress and good technical training based on IBM mainframes this opportunity may be of interest to you. Our client runs a Real-Time network located in a rural setting, where living costs are well below the average for the S.E. No matter what your programming or analytical experience a phone call could change your whole lifestyle — for the better!

4C419

Analyst/Programmers

c £5.5

If you are good at RPG2, are familiar with any machine in the IBM System 3 range and you have a flair for commercial analysis and design then do not hesitate to contact us now! Located in a very pleasant country village our Client offers a good career path and excellent opportunities.

4C419

Assembler Programmer

c £6.5k

This is an excellent opportunity for an ex-Systems Programmer, or a very competent assembler programmer to help develop an On-Line Real-Time system. The kit is IBM mainframe and the application will involve production control suites and some process control. Our Client is a large manufacturer and offers numerous company benefits. Please phone now for details.

5C419

Systems Programmer

c £7k

Our Client, a large multinational Company, operating an IBM 370 machine under OS-VS is looking for a really good "practitioner". If you are keen to learn, eager to progress and have the ability to really make things "tick" then do not hesitate, phone now for a quick assessment of your chances.

6C419

Analyst Programmers

c £6k

If you have at least two years' experience in either Cobol, Assembler or PL1 and you wish to progress rapidly into either Analysis, Project Management or Software development then our Client would be very interested in talking to you now. Numerous large company benefits are offered with these interesting positions.

7C419

Programmers

c £4.5k

Our Client is currently running an ICL 1900 kit but is shortly to purchase powerful ICL 2900 series machines to increase business. So, if you have only 18 months' COBOL experience, preferably on ICL kit, and like working in excellent surroundings which will be supplemented by the usual perks one comes to expect from a leading Bank, then pick up the phone and find out more now!

8C419

Systems Designers

c £7k

If you call yourself a 'designer of systems' or if you would like to be known as one, then here is an excellent opportunity to do so now! Our Client is looking for persons with good analytical and design capability preferably on IBM kit to help them get a new development phase off the ground.

9C419

If you can't see anything here that suits you, still get in touch with us — We have many additional well paid vacancies in Essex and the City.

JUNIOR OPERATORS...

**AN IBM INSTALLATION
WITH AN OUTSTANDING
FUTURE...**

The most common criticisms made by Operations staff are the lack of formal training and standards, ability to diversify their talents into other operational areas and a general lack of interest shown by management in their overall career prospects.

Can an installation provide the answers?

YES. Our client can provide an environment geared to success and places the utmost importance on developing the career prospects of their operational staff.

SIX MONTHS IBM/OS (any OS System) OPERATING EXPERIENCE IS THE QUALIFICATION NECESSARY FOR THESE VACANCIES.

Applications are based on 2 x IBM 370/148's with current operating systems under the control of OS/VS1 and VM 370. Extensive communications equipment includes local and remote VDU's, typewriter terminals, and RJE facilities spread throughout the U.K. It is a highly sophisticated operation and one that will rapidly improve in terms of hardware and operational technology. The department also offers opportunities to move into Production Support, Network Control and Commercial/Technical programming.

Starting salaries will be in the range £3500-£4300 plus shift allowance and currently a TWO SHIFT system is in operation. Other benefits include 4 week's holiday, Sports and Social Club, Staff restaurant and Shift dining facilities and an outstanding RELOCATION PACKAGE. The location is Dartford, Kent.

SYSTEM /34 + HOLLAND

**INTERESTED IN THE
CHALLENGING DEVELOPMENT OF
A USER-ORIENTATED ON-LINE
SYSTEM /34 IN A VERY SCENIC
PART OF HOLLAND?**

READ ON:

We are an international trading company with complex and diverse interests whose administrative unit is situated in a pleasant wooded part of Holland.

Currently using an IBM System/34 we are engrossed developing an extremely complex data base type system to encompass all our activities including shipping, finance, administration, accounting, marketing, etc.

In order to maintain our development we are looking for a Programmer/Analyst who is an RPG II specialist with IBM System 32/34 experience. The job requires a self-starter with good initiative and an inventive mind, who can maintain existing programs and actively develop new sub-systems with the minimum of supervision.

Commensurate with the position a good salary plus attractive fringe benefits are offered to the right applicant.

INTERESTED?

Please write in complete confidence, giving full details of age, salary and career to date, to:

Computer Services Manager Cheltenham Spa from £7,000

Endsleigh Insurances, market leaders in the academic and professional sector, are embarking on a full in-house computerisation programme after 4 years with a service bureau.

To help us make the transition as smoothly as possible, we're looking for an analyst/programmer with a proven record of writing complex programs in RPG II in a GSD environment who, after initial liaison with our software consultants in developing systems for our on-line IBM System 34, will assume full responsibility for the setting up and running of our computer services department. The successful candidate will be well experienced in Project Work preferably as team leader and will play a vital role in our middle management structure.

We're a young company who pride ourselves on our progressive attitudes not only to our business but to our staff as well. Benefits include a salary sufficiently negotiable to be no bar to excellently qualified candidates, non-contributory pension, free life assurance, PHI, and relocation expenses where relevant.

And being a thoughtful company, we located our head-office in a handsome, regency Cheltenham Spa which, with the Cotswold on the door-step is one of the ideal places to live, work and bring up a family.

Write, giving details of career to date to our Personnel Manager, Danny Mullen.

ORION SYSTEMS ANALYST

City of London

THE ORION BANK is a leading international investment bank, with six of the world's major banks as shareholders. Orion's assets exceed £1 billion and the profitability has increased impressively since its inception in 1970. Orion employs 280 staff in a modern, air conditioned building and is successfully involved in arranging financial packages through the Eurobond and syndicated loan market for an impressive list of corporate and private clients throughout the world.

COMPUTING AT ORION is successful; to maintain the growth in the bank's profitability, and retain the successful management style, fostered within a small highly professional staff, Orion has committed itself to comprehensive computerised systems. Consequently additional, high calibre, computer specialists who are keen to support a young, dynamic organisation in the implementation of the development plans are now to be recruited.

THE ORION PACKAGE

- * Mortgage subsidised to 2 1/2 %
- * Excellent salaries
- * Interest free season ticket loan
- * 4 weeks holiday
- * 35 hour working week
- * Progressive training plan
- * Relocation expenses where applicable

- * Non-contributory pension scheme
- * Luncheon vouchers (75p per day)
- * Free medical insurance
- * Special sickness insurance
- * Excellent working conditions
- * Free banking facilities

ALL POSITIONS REQUIRE you to be presentable, hardworking, with a good standard of education and capable of fitting into a small but expanding department. Skills will include the vision to define original but practical systems, the ability to discuss business problems logically and intelligently with users and to work well in pressure situations. Further you must be self motivating, ready and able to accept responsibility and keen to advance your career.

Senior Systems Analyst

Package C. £10,000

Reporting directly to the Systems Manager the Senior Analyst will lead a team of Analysts and Programmers and be responsible for the development of one of the scheduled systems using on-line and database techniques. Proven experience is required within the money market/foreign exchange environment and all project activities from feasibility study to implementation.

Systems Analysts Package C. £9,000

A Systems Analyst will report to a Senior Analyst and will be responsible for the analysis and detailed design of one of the four advanced systems scheduled for early development. All systems will utilise on-line and database techniques. Previous experience will include at least 2 years as an Analyst with systems design experience and a minimum of eighteen months programming experience. Ideally experience will include involvement in an on-line/real-time environment whilst applications knowledge gained in a merchant or investment bank would be preferable, but not essential.

Junior Analysts

Applicants will require a solid background in programming together with at least 1 year's systems experience gained in a well organised department. Qualities will be those mentioned above, coupled with the desire and the ability to progress quickly towards a full Systems Analyst role.

Capp Associates have been retained to recruit male or female applicants for these positions; for further details please telephone or write to our CROYDON office, quoting ref: CW105-9T or complete and return the coupon.

Please send me further details and an application form.

BBC COMPUTER SERVICES

Technical Support Unit

PROGRAMMER

to support IDMS on ICL 2960s

The installation includes 2 ICL 2960s running under VME/B, supporting TP, MAC, distributed processing and IDMS database.

We now seek someone with experience of database implementation (not necessarily under IDMS) to join the Technical Support team. He/she will assist us in supporting IDMS users on BBC computers, by consultancy, project participation and training, implementing, testing and maintenance of database software and development of new facilities.

The Technical Support Unit is located at the BBC Computer Centre in West London.

The salary will be in the range £5,200-£8,850 (currently under review).

Please apply for an application form enclosing addressed envelope and quoting reference number 1886/CW to Appointments Department, BBC, London W1 1AA; telephone number 01-580 4468 Ext. 4616.

BBC

ANALYSTS/PROGRAMMERS

Consequent upon an expansion in our Systems and Computer Department we now have vacancies for experienced SYSTEMS ANALYSTS AND PROGRAMMERS.

We provide a range of support and advisory services to Group Companies using an ICL 1901-T machine. The main language in use is COBOL and we operate under a George II system.

Programmer

Applicants will be at least 'A' level standard and have 2-3 years' programming experience. A knowledge of COBOL will be an advantage as will experience of ICL machines, George II operating system and communications systems generally.

Systems Analyst

Applicants will have between 2 and 5 years' experience in systems design coupled with experience in another discipline such as accounting or production control. The ability to programme in COBOL will be an advantage as will a knowledge of communications systems in an ICL context. The requirements are such that it is unlikely anyone under 28 will have sufficient experience.

The successful candidates (male/female) will find the work challenging with demands being made upon both motivation and judgement. The conditions of work are good and flexible working hours are in operation. If you live some distance from Coventry it may be possible to arrange a interview nearer your base.

Please write, under confidential cover, quoting sufficient detail of age, experience, qualifications and salary to render unnecessary the initial completion of an Application Form.

Business Systems Manager

East Midlands Based
c. £8500+car

Our client, a major British group in printing, packaging and publishing, has embarked on a long-term plan to investigate, develop and implement new manual and computer systems for all users in the organisation. Computer systems will be developed for the central mainframe or distributed equipment as appropriate.

The successful candidate will be responsible for the investigation of business requirements and the subsequent specification and implementation of commercial and financial systems, in conjunction with the Computer Services Manager where computer solutions are appropriate. The Business Systems Manager, who will report directly to the Group Finance Director, will control a small multi-disciplined team of Business Systems Analysts.

Our client invites applications from systems professionals with around 8 years experience in systems development, project scheduling and control at a supervisory level. The person likely to meet the requirements will be more interested in getting involved in the practical solution of business management problems than in the technical aspects of DP.

An excellent starting salary around £8500 will be offered to the successful candidate, together with a company car and significant benefits package. Relocation expenses will be available as appropriate.

Please phone for Personal History form, or write enclosing CV to Tony Palfreman, quoting reference number N58. Applications are invited from either sex.

UNIVERSITY OF HONG KONG CHAIR OF COMPUTER SCIENCE

Applications are invited from suitably qualified candidates for the Chair of Computer Science which is expected to be established from 1 September 1979. Annual salary (supernumerary) will be within the professional range and not less than HK\$140,000 (£1 = HK\$9.50 approx). Further particulars and application forms may be obtained from the Secretary General, Association of Commonwealth Universities (Upper 36 Gordon Square, London WC1H 0PF, or the Assistant Secretary (Recruitment), University of Hong Kong, Hong Kong. Closing date for applications is 28 January, 1979.

Institute of Naval Medicine, Alverstoke Computer Scientist

Royal Navy personnel, particularly those in ships and submarines are sometimes exposed to unusual health hazards. To help minimise these, the Institute of Naval Medicine in Hampshire carries out research into all relevant areas of medicine. The computer scientist supports personnel involved in these research areas.

The computer scientist appointed will be responsible to the statistician for operating and developing the use of the terminal link to an ICL 1904S computer at AUEW, Portland, the Wang System 2200s and the Data General Bellare System. It will be essential to develop and acquire both software and hardware for processing batch and on-line data from medical trials and surveys. The successful candidate will provide programming support to scientists in the fields of medicine, physiology, psychology, occupational hygiene and biochemistry particularly during experimental trials and will, as necessary, participate as a member of any working group.

Additionally, the computer scientist will maintain and establish new contacts with computer users in other Government Departments. Candidates, normally aged under 30, must have a good honours degree or equivalent in computer science or closely related subject. A good working knowledge of FORTRAN together with a year's programming experience is highly desirable. An interest in mathematics or statistics is also advantageous.

Appointment as Higher Scientific Officer (£4100-£5150) or Scientific Officer (£2840-£4410) according to qualifications and experience. Promotion prospects. Non-contributory pension scheme.

For further details and an application form (to be returned by 6 February 1979) write to Ministry of Defence, (M(S) 431, Room 370, Savoy Hill House, Strand, London, WC2R 0BX. Please quote ref: NA/6/10.

Department of Industry, Laboratory of the Government Chemist, London Computer Programmer

The Laboratory provides an independent service of chemical analysis and advice for all government departments. It also carries out research in analytical chemistry, where the development of Laboratory now in Central London, will be dispersed to Cockermouth, Cumbria in the mid 1980s.

The Laboratory uses several dedicated computers and the Computer Programmer appointed will work on a 16 bit word machine with a 65K Store and 200 Mbyte disc storage, to which a considerable range of Laboratory equipment is connected. Data acquisition, time sharing for 20 users, and batch stream services are provided.

Candidates, normally aged under 27, should have a Degree/OND/HNC or equivalent in a computer science discipline. A minimum of 18 months' programming experience in a high level language, preferably FORTRAN, is essential. Appointment as Scientific Officer (£3300-£4480) with starting salary according to qualifications and experience. Promotion prospects. Non-contributory pension scheme.

For further details and an application form (to be returned by 6 February 1979) write to Laboratory of the Government Chemist, Central House, Stamford Street, London SE1 8NQ. Please quote ref: SA/6/MB.

FREELANCE
ASSIGNMENT
SOUTH LONDON
01-402 9355**

Where on Earth can SYSTEMS ANALYSTS/PLANNERS create a City's computer facility from scratch?

In terms of magnitude, foresight and investment, probably the most exciting project to be conceived this century is the construction of two city complexes in Saudi Arabia. Planned and conceived by a Saudi Arabian Royal Commission, the Management Contractor for the Red Sea city of Yanbu is Saudi Arabian Parsons, an associate organisation of the Ralph M Parsons Company.

Apart from managing the construction of the City of Yanbu, we also have long-term responsibility for community planning, developing the Municipal organisational structure, and for the training of Saudi Nationals to fill posts in the completed project. A large part of these responsibilities rests on the planning, implementation and operation of the City's computerised systems.

We need pioneers in Systems Analysis to plan and influence the growth of this system from Hawlett Packard minicomputers through to massive Mainframe configurations; to create a highly-sophisticated Management Information System for the construction of the project and, ultimately, similar systems covering transport, amenities, payroll, finance and utilities within the City. We're looking for articulate and technically-competent professionals able to convey ideas in lay terms, who have front-end experience, preferably overseas.

Analysts and Planners with these capabilities, able to start from nothing and evolve an integrated system know what they're worth. But so do we!

If you'd like to know more about this challenging project and to have the opportunity of discussing just what we can offer you in return for your abilities, write or telephone Saudi Arabian Parsons Limited, c/o John Hooley, The Ralph M Parsons Company Ltd., Redley House, 39 South Ealing Road, London W5. Telephone: 01-579 3131.

Saudi Arabian Parsons

Data Processing Challenge

South Wales

Data Processing Manager

£5500 (Negotiable)

Responsible to the Data Processing Administrator (liaising on the day to day running of the department, duties include data control, management of staff and equipment and maintaining the existing on-line RSTS/E operating system using Basic + programming.

Ideally aged 27-45 years with experience in the use of a PDP 11/40 and commercial systems. Knowledge of the RSTS/E operating system and programming language Basic + is required.

Analyst Programmer

c £5000

Directly responsible to the Data Processing Manager with whom close liaison is kept on the running of the department of a staff and taking over in his absence. Duties include the programming of the Digital PDP 11/40 computer using language Basic +.

Ideally aged 25-45 years with experience in the use of a PDP 11/40 and commercial systems. Knowledge of the RSTS operating system is essential with knowledge of language Basic + being an asset.

These positions are located in an attractive area of South Wales. They offer an excellent starting salary plus a productivity bonus and benefits of working for an expanding internationally respected company. Relocation assistance is available.

Peterborough

Total Remuneration up to £7200

British Sugar is an expanding Company. Already 'Silver Spoon' sugar is the leading retail brand in the United Kingdom. With a current turnover of more than £300M and an expansion programme of £150M the Company is moving towards supplying half the country's needs for sugar.

To meet these changing requirements of the business and in order to utilise new technological advances we need to strengthen the Computer Services Department. This Department provides a central computing function to seventeen sites across the country. We now use VDU systems which are being expanded to cover all locations.

Our requirement is for Analysts with practical experience in system design and implementation. We are looking for people who have worked with user departments in order to define their requirements and we expect a good educational background.

We pay competitive salaries and believe that we can provide a progressive and challenging environment in which to work.

If you think you meet our requirements please write, enclosing a full CV, to: R. J. Bass, Personnel Services & Staff Development Manager, British Sugar Corporation Ltd., P.O. Box 26, Dundee Road, Peterborough.

We seek a young programmer with a simple yet a experience to work in RPS for which training will be given on the world's latest selling min. the Honeywell Level 8. The client is currently working on the last stage development of a plant system with further systems possibly to be installed throughout Germany.

Consultant — Damien Handlip. Telephone 021-454 7906

OPS MANAGER, PROGRAMMERS TO ANALYSTS GLASGOW, FROM £4,500 UPWARDS TO £7,000

A large engineering group using IBM hardware under OS have an urgent requirement for a wide range of additional staff at all levels of a rapidly growing operation. Languages include Cobol and Assembly. Any knowledge of CICS, DB/2 and PRO/400 would be especially welcome. Significant employment prospects exist for a large and varied number of DP people up to Project Team level. Please apply urgently to EMS today, completing the attached application form.

Consultant — Don Philp

PROGRAMMERS MIDDLESEX, TO £6,500

Candidates should be experienced on ICL 2900 or 1900 series equipment using Cobol and other VMEB or George III+. Applications include development of a Village Cost Reimbursement System, Incentive Bonus Scheme Admin System, Salesmen Commission System, Payments and Payroll and an Employee Outburst.

Additional enhancements include Cost Accounting, Creditors Payments System and a Payroll System. Relocation assistance will be given where appropriate.

Consultant — Don Philp

IBM PROGRAMMERS SURREY, TO £6,700

Experienced IBM Programmers, with at least 2 years Cobol and CICS involvement are urgently required to work on Commercial and Stock Control projects. Any VMEB experience would be especially advantageous but adequate experience must be gained in future experience. Relocation assistance will be given where appropriate.

Consultant — Selma Mills. Telephone 0782 623665

PROGRAMMER LONDON, SW1, TO £5,200 & LONDON ALLOWANCE

You require an experienced programmer to work in a small group providing computer services to a variety of user departments programming in-house systems, models to market research data. The company use IBM 370 and ICL 1900 series facilities via CEC 4070 Time-sharing terminals and prior 2 years experience in Fortran and Cobol. Further experience will be essential. Candidates should also have knowledge of ICL Assembly and George III, although training will be given in these areas to otherwise appropriate candidates. A degree will be preferable in a related subject such as Maths, Stats, Computer Science etc.

Consultant — Don Philp

ANALYST/PROGRAMMER REDDITCH, WORCS, NEG.

Our clients are developing MIS around a Unicom Manag 77 min. with prices, rates and several VMEB's. Programming will be at Cobol. Currently the company runs a head on line and batch in service based on ICL 2900. Candidates should be educated to 'A' level standard, be aged 24-35 with a minimum 3 years' solid DP experience and be good communicators. Any previous min. Cobol experience would be especially welcome. Some knowledge of On-line transaction processing or main database would be attractive also. Applicants must have sound commercial experience. Relocation support will be provided where necessary.

Consultant — Carol Poulton. Telephone 0782 623665

CUSTOMER APPLICATIONS ENGINEER MANCHESTER, NEG.

We seek an Engineering Graduate with some Computer Aided Design experience. He will be responsible for existing to Bureau/Time-sharing service, to apply their Computer Aided Engineering Design packages to provide full required client information facilities, enhancing the system where necessary. It would be useful to have some experience in the use of Finite Element Techniques.

Consultant — John Wood

ANALYSTS AND PROGRAMMERS SLOUGH, NEG.

Analysts with a good commercial background are urgently required to assist a large Turnkey group on both feasibility studies and plant systems development. Any previous min. experience would be especially advantageous. Programmers must have good Assembly experience and will initially be working on Cobol compiler development. Any previous min. experience will be of considerable interest.

Consultant — Brian Davies. Telephone 021-454 7906

PROJECT LEADER LONDON, EC1, TO £8,000

Our clients, an IBM user, are seeking a senior analyst with a programming background, to assist with the development of Accounting and Stock Systems. Preference will be for candidates with Mark IV language knowledge, but COBOL would be an acceptable alternative. Good user communication ability will be important.

Consultant — John Wood. Telephone 0782 623665

POP PROGRAMMERS SURREY, NEG.

A major electronics manufacturer has urgent needs for experienced DEC Programmers to work on main systems for industrial and defence projects. Experience sought includes RSX-11 or RT-11 with preferably MACRO-11 also. All candidates must have used POP 11 equipment in a technical or scientific environment.

Consultant — Brian Davies. Telephone 021-454 7906

POP 11 SOFTWARE ENGINEER DORSET

Software Engineers and Analyst/Programmers are required by a large national electronics group to work at their Dorset factory on Traffic Control Systems. All candidates must have POP 11 experience using CORAL or Assembler. Ideally some message switching experience will also have been gained.

Consultant — Brian Davies. Telephone 021-454 7906

DOS OPERATORS LONDON, SW9, TO £4,500

Experienced IBM-DOS operators are required by an industrial client working on a 3 shift system. Shift times are 08.00 am to 4.30 p.m., 3.30 p.m. to 10.30 p.m. and 10.30 p.m. to 08.00 am. Please complete the attached application form today for only interview.

Consultant — Carol Poulton

ANALYST PROGRAMMERS DERBY, NEG.

Our clients, an engineering group using an Allied Business Machines Computer, require experienced Cobol Programmers, preferably with some experience. A simple and quantity of applications development currently exists, requiring adequate programming for years to come.

Consultant — Don Philp. Telephone 021-454 7906

ANALYSTS WILTSHIRE, TO £6,500

A major commercial trading group with a significant Data Processing machine investment have continuous requirements for experienced Analysts to work on Commercial and Distribution based systems. The company is based in an attractive part of Wiltshire with easy access throughout the West of England. Significant career prospects exist for all successful candidates with a successful input to the group.

Consultant — Carol Poulton

ANALYST STAFFS, TO £5,500

Candidates seeking project leader opportunities are sought in the Newcastle under Lyme region by an engineering subsidiary of a major national group. The company use an on-line terminal facility to a group machine, and provide M1 S to manufacturing and administrative management. All candidates should have at least 3 years' systems experience in an engineering environment.

Consultant — Don Walklate. Telephone 0782 623665

COBOL PROGRAMMERS NORTHUMBRIA, TO £5,500

A major now Honeywell client need a substantial quantity of additional experienced Cobol Programmers, any machine, to help with large scale systems development and conversion.

Please telephone our Birmingham Data Centre for further information.

Consultant — Damien Handlip. Telephone 021-454 7906

JOB SLOTS

ANALYSTS AND PROGRAMMERS — LONDON 4K to 7K

Candidates with one year or more DP experience are urgently required by hundreds of London and Home Counties clients prepared to pay attractive salaries in order to attract experienced development staff.

EMS is obtaining a number of five offers for virtually all London and Home Counties staff using our computerised recruitment system. We are literally covering every single available position in the country. No one can afford not to find their next opportunity without the EMS recruitment system. You're cross matched against every vacancy, rather than just the two or three advertised each week which appear in most papers. Every employer, all hardware, operating systems, languages and applications. How can you compete against EMS? We get results and have thousands of satisfied clients each year.

Just complete the attached application form and see how fast we get results for you. Even better, bring it with you and meet us in London if you can make our visit in person. Otherwise, don't miss the golden opportunity of EMS services on your behalf. We have a worldwide service second to none. For an estimate of your time to complete the form, see it prove it to you.

Consultant — Don Philip, Carol Proudman
Telephone 021-454 7908

HONEYWELL ANALYSTS AND PROGRAMMERS — ENTIRE UK £4,000 to £8,500

EMS is the foremost Honeywell support consultancy within the UK, having a substantial quantity of requirements from most Honeywell users throughout the UK for Analysts and Programmers to assist with new developments.

Honeywell hardware is currently experiencing a high demand sales boom, resulting in many new installations being captured and a need for both experienced staff and IBM, ICL and other support staff to maintain the equipment, to assist with new users' complete development requirements.

If you want the best jobs at Honeywell installations, register with EMS. We're where the jobs are, all on our computers waiting for you.

Consultants — Don Philip, John Wood

COBOL, ASSEMBLER PROGRAMMERS — LONDON, MIDLANDS, NORTH 4K to 6K

We urgently require a minimum of 2,000 experienced Programmers to help in current close requirements throughout every major town and city within the UK. Clients include Banks, Business, Computer Manufacturers, Consultants, Educational, Engineers, etc. All requirements, irrespective of background, currently attract a lucrative career opportunity. Should you apply to EMS via the attached application form for interviews in the areas of your choice by every local employer able to offer the professional and salary required. Hardware includes IBM, Honeywell, ICL, NCR through to minis. Let EMS develop your career for you. Join thousands of other satisfied candidates.

Consultants — Carol Proudman, Selina Mills, Don Philip

IBM ANALYSTS, PROGRAMMERS, OPERATIONS MANAGERS AND SUPERVISORS KUWAIT £20K PACKAGES TAX FREE

The rapidly expanding Kuwait economy requires a large number of experienced staff each year to assist with installation and development, both within the industrial and commercial sectors, and within the Public sector in various Ministries.

Staff are urgently required at all levels from Operations Supervisors to Programmers, Analysts/Programmers, Analysts through to Senior Consultants. Attractive tax employment packages await with furnished accommodation provided. Numerous new candidates are urgently required for London and Midlands interviews during the next week. Complete the attached form without delay. Applicants must not have more than two children. Preference will be for candidates with no children.

Consultant — John Wood

TOP SALESMEN AND SALES MANAGER 10K-20K (and it is achievable)

EMS is planning substantial further development of both our Consultants and Turnkey Systems Division during the coming months. Our Consultancy services extend across all mainframe ranges and encompasses a wide range of industrial/commercial organisations. Applicants must, therefore, possess a high level of Business Analysis capability of rapidly assessing clients requirements and proposing consulting solutions where appropriate or quantifying the relevant consulting experience required in either systems or programming and providing the necessary staff from EMS resources. A vast potential market exists for salesmen marketing IBM, Honeywell, ICL, NCR through to minis.

Equally, our Turnkey Systems Division provides total UK coverage, marketing Honeywell Level 8 mini-computer systems and supporting software to a wide range of UK users.

Experienced Salesmen capable of developing their own territories are urgently required. A substantial quantity of leads are also supplied by extensive and vigorous advertising campaigns and Road Show ventures. Salesmen must possess an adequate mini-computer knowledge for Turnkey Systems positions. Can will be provided with adequate base salaries and high prospective incentives. Apply by telephone for interview during the next week at our Birmingham Data Centre. All UK territories will be covered from the pending regional development of our Consultants.

Consultant — John Wood

ANALYSTS HERTS, Up to £7,200

One of Britain's largest trading groups has a large quantity of outstanding systems and analysts vacancies to cope with substantial expansion plans being developed. The client requires candidates to have an IBM background and preferably with some programming experience. In addition any IMS or COBOL knowledge would be an asset. Excellent working conditions are available with interesting and absorbing projects and good career development opportunities. Fulltime be provided where appropriate.

Consultant — Don Philip telephone 021-454 7908

PROJECT MANAGERS, ANALYSTS AND PROGRAMMERS Birmingham Data Centre 4K to 7½K

EMS urgently need over twenty more staff to support the Turnkey Systems Division. Staff are working on a wide range of development projects for both last time and network users. Ability to programme in Cobol and work as a small team member, committed to tight deadlines, will be important.

In house machines include Honeywell Level 6's and ICL 2902's. Experience of Cobol on any machine will be acceptable as training will be given. Applications include Ledger, Stock Control, Financial Planning, Payroll, etc. Machine programming is currently used in an on-line environment. All programmers have extensive knowledge in development and testing. Occasional travel to client sites for testing and installation will be involved. Overtime working to help with tight deadlines will be essential. All Analysts must have had previous programming experience and be prepared to assist on frequent occasions when peak programming loading occurs. Analysts will also be given Business Analyst opportunities to undertake feasibility studies and make client presentations assisting the Marketing teams. The installation is this modern and attractively furnished. Excellent career opportunities are available for all levels of motivated staff, keen to make a personal contribution to our outstanding growth record. Either attend our interviews directly as advertised, or return your career form today and telephone us for an early meeting. Don't miss this outstanding opportunity of working on 1980's applications now.

Contact: Don Philip/Danien Handslip

ANALYSTS North West £6,000-£8,000 Packages

Staff are urgently required to support growing client consulting commitments throughout the region and to work on a wide variety of development and maintenance projects. Applications include Ledgers, Stock Control, Distribution Systems, Financial Planning through to Payroll. Candidates should possess a minimum 3 years systems experience and be capable of working in a team environment both within large and small installations. Opportunities exist to gain experience of major merchandising systems and intrinsic hardware. Can, with at least 3 years systems experience, if you are interested in earning an attractive salary and expenses package, complete the attached career form today and return it to EMS without delay.

Consultant: John Wood (Newcastle Office)

PROGRAMMERS HERTS, Up to £6,400

Britain's first IBM Series 30 site has a large number of outstanding vacancies on numerous interesting new development projects. Experienced IBM Programmers are urgently sought to work on large project teams. Any IMS, TSO experience would be especially valuable. Otherwise, general OS/COBOL will be acceptable. Fulltime assistance provided.

Consultant Don Philip, telephone 021-454 7908

Lecturers

Hardware & Software
West London or North Cheshire
£6,500-£8,000 dependent on experience

Our Clients are a progressive and well established computer manufacturer with an excellent reputation in both the commercial and scientific markets.

Rapid expansion in the U.K. has created the need for more lecturing staff with hardware or software skills. Previous lecturing experience is essential at the senior end of the scale but not so at the junior end.

Hardware lecturers should have good in-depth electronic backgrounds with suitable qualifications and actual computer hardware experience would be particularly useful. Software lecturers should have good backgrounds in commercial languages and operating systems.

The positions in North Cheshire will be based initially in West London (probably for about 6-9 months) and during this time, accommodation allowances will be negotiated on a five-day week basis.

Interested candidates should telephone BOB BOWER the Advising Director, to arrange an interview.

SPECIALIST RECRUITMENT CONSULTANTS

Marketing Specialists

Central London based with some European travel
Circa £7,500 basic plus bonus and attractive tax-free car allowance

Our Clients enjoy one of the best reputations in the world for marketing and training resources. Enhancement of the U.K. Marketing Department has created two further vacancies.

Product Specialist

To take responsibility for the marketing of a specific product. The job includes pricing, stocking, configuring, creation of literature and sales aids, training, liaison with the Company's European Headquarters, support at large sales negotiations, presentations, analysis of competition and general support at a senior level.

Candidates should have a good knowledge of applications software and operating systems and an appreciation of hardware technicalities and COBOL.

Application Specialist

To control specific applications areas relating to Trade and Industry and in particular such areas as dept accounting and other distributed data processing applications.

The job involves researching specific applications areas, helping to create packages, planning sales campaigns, training, running sales workshops together with product specialists, supporting large sales negotiations, and generally offering troubleshooting and support back-up at a senior level. Applicants to the job will clearly identify closely with this specification and have the necessary experience upon which to draw.

Applicants to both positions could come from a variety of backgrounds such as sales, marketing, support, software house, large commercial T.P. user etc. Preferred but not essential is an age group of between 28 and 35 and an education to Degree or equivalent.

These are two first class opportunities and interested applicants should contact BOB BOWER Advising Director to arrange an early interview.

SPECIALIST RECRUITMENT CONSULTANTS

Director of Systems Planning

LOCATION: Brighton

SALARY:

Extremely competitive
Other benefits include mortgage
subsidy and company car

Our client, the Card Division of the American Express Company based in Brighton now wishes to recruit a Director of Systems Planning. The position which is completely new, will be responsible for all hardware, software and business systems planning within the Management Services Group of the Card Division.

We are looking for someone within an age bracket of 30-40, who has had experience of working in a large user environment or a computer consultancy, where his or her responsibility will have covered some of the things mentioned in the previous paragraph.

Currently, American Express are establishing a department which will be responsible for all systems planning, and one of the major responsibilities will be to develop this department and

ensure that the proper service is provided to the Systems Development Group and the Operations Group, as well as the users of Computer Services.

The successful candidate will be aware of the impact new hardware and software can make on business decisions, and will have the ability to harness hardware and software to both long and short range and business planning.

This business opportunity is exceptional. This position is seen as one of the most important appointments within the computer group. If you feel you have the kind of experience indicated by the job title and the description given, please send a comprehensive curriculum vitae to John Goldsmith, with a contactable telephone number.

Ref: 2168/C

Herts

Product Manager

£9,000 + Generous car allowance

We are looking for a Manager to take full marketing responsibility for the software of our Clients, a leading computer manufacturer.

This responsibility includes keeping up to date with the latest software developments, defining the market size and requirements, planning and implementing product promotion and product launches, planning and implementing sales literature and training.

Business Analysts

£8,000 + car allowance

One Analyst is required to help install a ledger package and provide subsequent support, and one to help install a payroll package.

Once the packages have been taken on, the work involves assisting in defining and solving customer requirements and assisting in the installation of the packages and the provision of subsequent support.

Good communication skills and a willingness to travel are required together with two years COBOL experience and experience in analysing and installing either ledger or payroll systems.

For further information, please contact MARK IRENS.

At Honeywell we really appreciate SALES EXECUTIVES...

...in every sense
of the word!

There is much more to a selling job with Honeywell than just the prestige of working with one of the top names in the computer industry. In every way our sales executives are highly valued employees. We pay them well, we train them thoroughly, we support them with enthusiastic and highly competent pre and post sales support technicians, we provide them with real scope for creative selling and above all, we ask them to sell a range of computers which is at the forefront of technology and performance.

Levels 62 and 64

All over the United Kingdom our business is expanding rapidly, with particular success in

East Anglia

where our growth has created the need for further SALES EXECUTIVES based at our CLICHESTER offices. This operation is well supported with modern facilities, highly qualified support personnel and a wide range of existing clients.

We generally expect our sales executives to earn between **£11,000 and £14,000 per annum**

as well as providing them with a company car and a variety of fringe benefits, but of course this income range excludes our 'high-fliers'.

If you are already a successful sales executive with over 2 years direct experience of selling commercial applications systems and feel that your career path is in need of enhancement, we'd like to meet you - wherever you are!

SENIOR CONSULTANT

Aslib has provided a specialist consultancy service in the field of information management for over ten years. Our clients have included industrial and commercial companies, professional institutions, government departments and international organisations. Our work is varied and involves:

- designing and setting up new information systems or libraries of various kinds;
- reviewing and evaluating existing services and advising on their future development;
- advising on the use of specific techniques (including computer techniques) for information handling or library processing;
- undertaking contract research.

We are now seeking a SENIOR CONSULTANT to join our Research and Consultancy Division. The essential requirements for the post are:

- a keen interest in the solution of complex, and often novel, problems in the information field;
- objectivity in gathering and analysing the data on which decisions can be based;
- ability to communicate the results and conclusions of an investigation to the client organisation.

The kind of person we are hoping to recruit could be a practising information scientist with a flair for systems design, or a specialist from the field of computer science with an interest in information problems. Our offices are in London, and the work would be 28-40, and a degree and/or professional qualification would be required. The position is in a grade with a salary ranging upwards from £5,000.

Application forms are available from Pat Gros at Aslib, 38 Bedford Row, London WC1R 4JH. Tel: 01-242 4282.

Aslib

Data Base Administration

As an International Marketing Research Company and a leader in the business information services, we require someone with a good background in Commercial Systems to introduce Data Base to the United Kingdom.

Our Head Office is located in a rural setting on the outskirts of Oxford. The installation comprises an IBM 370-145 running under OS/VS1 and a DEC PDP 11/34 running under RSX/E.

If you have a good knowledge of one or more DB/DC System for IBM hardware and a couple of years' experience in designing and implementing DB/DC Systems, we'd like to hear from you.

In return, we can offer you a challenging and rewarding job, there'll be some travelling to clients and a starting salary up to £7,000 and an annual bonus and results-orientated management approach. Full relocation expenses will of course be met where appropriate.

For an application form, please telephone or write to: Mrs. Carol Nayne, Personnel Services Manager, A.C. Nielsen Company Limited, Nielsen House, Headington, Oxford, Telephone: Oxford 64881, Ext. 202.

KUWAIT — TAX FREE APPOINTMENTS

SYSTEMS ANALYST — £14000) PLUS
PROGRAMMERS — £13000) BENEFITS

THE COMPANY

We are a major trading group in Kuwait with diverse interests in automotive sales, domestic appliance retailing and contract engineering.

THE INSTALLATION

We have been using computers to help run our company since the early 70's. Our present computer is a NCR Century 201 operating under 'B3' running a mix of online and batch systems. Later this year we plan to upgrade to a NCR Century 8550 using VAX and the TOTAL database management system. We intend to develop several new online systems and require additional analysts and programmers to help us do so.

THE ANALYSTS

The people we are looking for will be able to demonstrate the following:

- * At least 3 years' experience as a Systems Analyst
- * Significant experience in Hire Purchase or Retail Finance applications
- * Experience of On-Line systems design
- * Responsibility for the design and implementation of at least one major system.

In addition they must be self-motivated, innovative and capable of acting as an in-house consultant to the user department.

THE PROGRAMMERS

Applicants for the programming position will ideally have the following experience:

- * At least two years' programming experience using NEAT/3 and COBOL
- * Working knowledge of NCR Century operating systems.
- * Experience of structured and modular program design.
- * Supervisory experience.

** Applicants with previous NCR online programming experience are especially welcome

THE BENEFITS

Our contracts are of 2 years' duration and are renewable. The emoluments quoted above which include salary and housing subsidy are tax-free and permit the accumulation of substantial exportable savings. Additional benefits include a Company air-conditioned car, interest-free furniture loans, and paid leave equivalent to 60 days per contract.

THE APPLICATIONS

Interested persons should send an updated C.V. to MRS SUSAN HOLLEY, 6th FLOOR, SILVER CITY HOUSE, 62 BROMPTON ROAD, LONDON SW3 1BW, quoting reference R2406. All applications will be acknowledged and forwarded to our EOP Manager in Kuwait for selection of candidates for interviews in London.

**monklands
district council**

The Council invites applications from suitably qualified and experienced persons for the following posts:

**DEPARTMENT OF FINANCE AND
MANAGEMENT SERVICES
Computer Section**

Computer Operator

H.G. £2,987-£3,244 + £312 p.a. Supplement

Ref. No. 03/82

A vacancy has arisen for an operator for the Council's ICL 2903 with 32K memory, 3 x EDS 60s, 5 x DOE stations and various terminals, both local and remote. Applicants should have one year's experience of operating, preferably on ICL equipment under GEORGE II or EXEC 1 or 2 operating system.

N.J.C. Scheme of Salaries and Conditions of Service for A.P.T. & C. Staff will apply.

Application forms are available from the Personnel Officer, Monklands District Council, Municipal Buildings, Dunblath Road, Coatbridge.

Completed forms should be returned by 24th January 1979.

**J.S. NESS
Chief Executive**

Opportunities for Programmers in computer aided design

Software Sciences Engineering is a specialist subsidiary within the UK's largest computing services organisation. Based in Rugby, the company provides a computer aided design and draughting service to engineering industry throughout the UK. Customer demand has created a number of career openings for experienced programmers seeking challenge and variety in their work.

We are looking for candidates, educated to degree level, with practical experience in:

Engineering — there are two opportunities for people with an engineering background plus FORTRAN programming experience. Knowledge of draughting, component design, or finite element analysis would be an advantage.

Mathematical computing — we also have an opening for a specialist with FORTRAN and machine code experience (Prime 300 or other mini).

Successful candidates will be working in areas where they will have the satisfaction of seeing immediate benefits from the practical application of their skills. In particular their work will include:

- contributing to the further development of our SWIFT computer-aided design/draughting system;
- writing special-purpose routines into SWIFT in response to individual customer requirements;
- developing specific new programs for our clients in all areas of computer aided design and manufacture and engineering graphics.

At Software Sciences Engineering you will be getting the best of both worlds — the chance to make your mark in a small company where each individual really counts plus the benefits, prospects, and stability offered by a major computing group whose success depends on its understanding of the needs and ambitions of its professional staff.

If you are interested in this vacancy, please contact Maureen Smith at Software Sciences Engineering, by letter or telephone, for an application form.

Based at Rugby

Communicate with Racal

Racal-Milgo Limited is already the leading Data Communications Company in the UK through the largest growth in business in its history. The market is huge, the products are without equal and the rewards are high. Ambitious people (male/female) are now sought to join the successful UK Division in the following capacities:

Area Sales Engineers

— to sell our comprehensive range of data communications equipment to computer based users within defined territories

Applicants should have either selling experience in the communications, computer fields, or engineering backgrounds and strong desire to break into the commercial world. All necessary training will be given. These positions will be based at our Reading, Manchester or Birmingham offices and will command attractive base salaries, generous commission and a Company car.

Internal Sales Engineers

— to co-ordinate the activities of the Field Sales Team and to actively support projects in the pre-sales stage. This involves extensive customer contact and liaison with all Company departments.

Applicants should have an electronic technical bias and a good telephone manner, preferably gained in a commercial environment.

These internal positions (in Reading or Manchester) can lead to Field Sales appointments.

In addition to competitive salaries, the Company offers over four weeks annual leave, a first class contributory pension scheme with free life assurance and relocation assistance where appropriate.

Ring for an application form, or write with personal and career details to:

D. J. Kitchenside, Personnel Officer, Racal-Milgo Limited, Prospect House, Thorn Street, Reading, Berkshire. Telephone: Reading 595314

Analyst/Programmers

Halstead, Essex

We are the European Medical Division of Corning Glass Works — a large US multinational corporation. We develop, manufacture and market in-vitro clinical instruments.

We now have opportunities for a number of Programmer/Analysts to take responsibility for:

- examining proposed information systems
- preparing projects and agreeing their specification with relevant departments
- planning, writing, testing and documenting programs to run on the computer
- providing operating instructions together with standard utilities for the execution of a given system.

Educated to 'A' level standard, successful applicants will have 18-23 months experience of RPG II/System 3 and the ability to work effectively in a small team.

We offer an attractive salary and generous benefits package including relocation costs where appropriate. Career prospects within this worldwide Group are excellent.

For further details and an application form, please contact Brian Murray, Personnel Manager, Corning Medical, Corning Limited, Northern Road, Chilton Industrial Estate, Sudbury, Suffolk CO10 6XD. Tel: Sudbury (07873) 76481.

CORNING

Programmer Wrexham

Air Products Limited is a leading manufacturer and distributor of industrial gases, operating plants and depots throughout the U.K.

We now require a Programmer at our Engineering Works at Wrexham in North Wales. Part of an international organisation, the company operates computers and terminals throughout the UK, Europe and the U.S.A.

The European operation is served by an IBM 360/65 750 megabyte computer and the Engineering Works operates a large Data 100 terminal link with various other TP options.

We expect the successful applicant to have a basic grounding in COBOL with experience on commercial systems. Training in other aspects will be given. Salary will be in excess of £5,500 and is currently under review.

Please apply in writing to: The Personnel Manager, Air Products Limited, Acreleir, Wrexham, Clwyd, N. Wales.

Air Products

UNIVERSITY OF SURREY COMPUTING UNIT

ANALYST/PROGRAMMER

Salary scale to £6555 per annum (under review)

The Data Processing section of the University's Computing Unit has a vacancy for an Analyst/Programmer to be responsible for all computer systems required by the Library and Bookshop. Outlets include systems analysis, specification, design, programming, testing, documentation and implementation. First priorities will be the development of a completely new system to control the ordering of books, and the provision of online functions for book borrowing and reservation.

Some successful system design work, and at least two years' programming experience (COBOL or similar) are essential requirements; but experience in particular applications, or with particular computers, is less important than the personal qualities of adaptability, self-motivation and an ability to communicate.

For further details, or to arrange an informal interview, please telephone Mr. A. Hall on Guildford 71281, Ext. 730.

Applications in writing, including the names and addresses of two referees, should be addressed to the Staff Officer, University of Surrey, Guildford, Surrey GU2 5HX.

Project Leader

Salary scale £7,468-£7,879 per annum

Required for our offices in E.C.1.

The successful candidate will manage a team of system analysts and programmers in the day-to-day maintenance and production of new suites of programs. Four years' experience of programming and systems analysis, two in a senior role, are a minimum requirement. Knowledge of Informatics MARK IV, COBOL or APL would be an advantage but more weight will be given to evidence of leadership and organising ability.

We operate two IBM 370/148 computers connected to a large teleprocessing network. Interesting developments in this network are in hand involving the evaluation of IBM's Series/1 and similar equipment. The software environment is DOS/VSS under VM, utilising CMS for on-line program development. Senior work is handled by Informatics MARK IV.

Generous holidays — Staff restaurant — Flexitime. If interested, why not ring Mike O'Meara on 01-337 3300, Ext. 2331/1330 for further information and an application form, or simply send concise details of your qualifications and career to date, and quoting reference CW to: Laurence O. Wild, CEng, FICE, FIMechE, FIWEE, Divisional Manager, Room 680, Thames Water Authority, Metropolitan Water Division, 173, Rensbury Avenue, London EC1R 4TP.

The post is open to male and female applicants.

Thames Water

Computer Operators

Rutherford Laboratory

Vacancies for Computer Operators have arisen at Rutherford Laboratory, at Chilton (near Didcot, Oxon.).

The Computer Operations Group runs an extensive computing service for the Science Research Council. Two large IBM 360/195 computers are in use, supported by an international network of work stations and terminals.

A Univas 1108 installation will also be added to this configuration in the next few months.

Previous experience, with either IBM or Univas equipment, whilst not essential, would be an added advantage.

Since the computers are in continuous operation, candidates must be prepared for varied shift work, for which additional allowances will be paid. Working conditions are excellent — there is a restaurant as well as shopping and recreational facilities — and shift transport runs to selected local centres. Plus generous holidays, sick leave allowance and contributory superannuation scheme.

Salaries will be related to the following grades, depending on qualifications and experience:

S.O. Degree or HNC in Mathematics or Computing. Salary £3017-£1721.

A.S.O. GCSE level in 3 subjects including English Language and a Science subject. Salary £2341 (age 18) £2851 (age 21) £2922 (age 22 or over) rising to £3531.

TRAINEE DATA PROCESSOR No formal qualifications required. Salary £1043 (age 18) £1552 (age 21 or over) per week.

DATA PROCESSOR (After training) £1532 £54.66 per week.

Contact Rutherford in the Personnel Group on Abingdon 0255 21900 Ext. 610.

Or write to: Rutherford Reference VN 765.

Closing date for applications January 20th 1979.

Recruitment Advertising • Search • Selection

Project Leader Central Scotland Circa £6500

A major new installation and a planned introduction of a new management information system have created an excellent opportunity with a leading manufacturer.

The position requires an individual with proven experience in leading a team of IT personnel and who has the ability to control and motivate staff. The successful candidate will be responsible for a Honeywell 11/10 which will be used to run manufacturing systems on a host of 11/10. Candidates should also be able to communicate with and advise users in new computer techniques. The position offers the opportunity to work in a modern developing IT environment where innovation is encouraged and suitably rewarded.

A competitive starting salary is offered together with all of the benefits usually associated with a large progressive organisation including relocation assistance where necessary.

Please reply in writing, giving details of your career to date and quoting Reference R 44435, to:

The Manager, Confidential Reply Service, MCS-ROBERTSON & SCOTT, MCS House, 23 Park Circus, Glasgow G3 7AS.

All letters will be opened, acknowledged and forwarded to our client. Please do not send any applications to which your application should not be sent.

This vacancy is open to male and female candidates.

SYSTEMS ANALYST/PROGRAMMER

(Ref. RN.545)
(Scientific and Technical Applications)
£2,882-£5,094 p.a.

Applications are invited for the above post in the Computer Services Technical Systems team based at the Authority's computer centre in Central Bradford. Duties include the provision of support to engineering and scientific users and the development and implementation of a wide range of technical programs and packages on the Authority's ICL 2870.

Applicants, male or female, should hold a degree, preferably in Mathematics, Engineering or a Scientific subject and have had at least three years' practical experience in the technical computer applications field. A working knowledge of one or more of FORTRAN, ALGOL, BASIC or COBOL would be an advantage.

Relocation expenses and disturbance allowance are payable in approved cases.

Application forms are available from the Regional Personnel Office, Yorkshire Water Authority, West Riding House, 87 Albion Street, Leeds LS1 5AA (Tel. Leeds 448201 ext. 289), to whom they should be returned by 16th January, 1979, quoting the appropriate reference number.

IBM 370 ENGINEERS

An unusual and exceptional opportunity has just arisen for two experienced IBM 370 series engineers to join the new division of an internationally renowned company.

Those of you who prefer an independent, technically demanding role and thrive on variety, responsibility and challenge will definitely enjoy the work, which centres on the relocation of IBM 370 series mainframes across Europe. International travel is a fundamental feature, but trips are planned well in advance — unlike "Support." Time off in lieu/O.T. payments are provided and exceptional career progression is virtually assured.

Ideal candidates will have 145/158 experience but all applications will be carefully considered.

The additional benefits provided are very generous.

For the opportunity to go far quickly — contact Peter Gorton.

FIELD SERVICE ENGINEERS

SALARY PACKAGE: To £6,500 package + Car
AREA: Greater London

EXPERIENCE: Practical experience of computer systems in industrial/commercial environments is required.

OPPORTUNITY: The U.K. Division of this multi-million dollar American company is small but established, and with sales at an unprecedented high, they expect to double in size within five years. Thus career progression is virtually guaranteed.

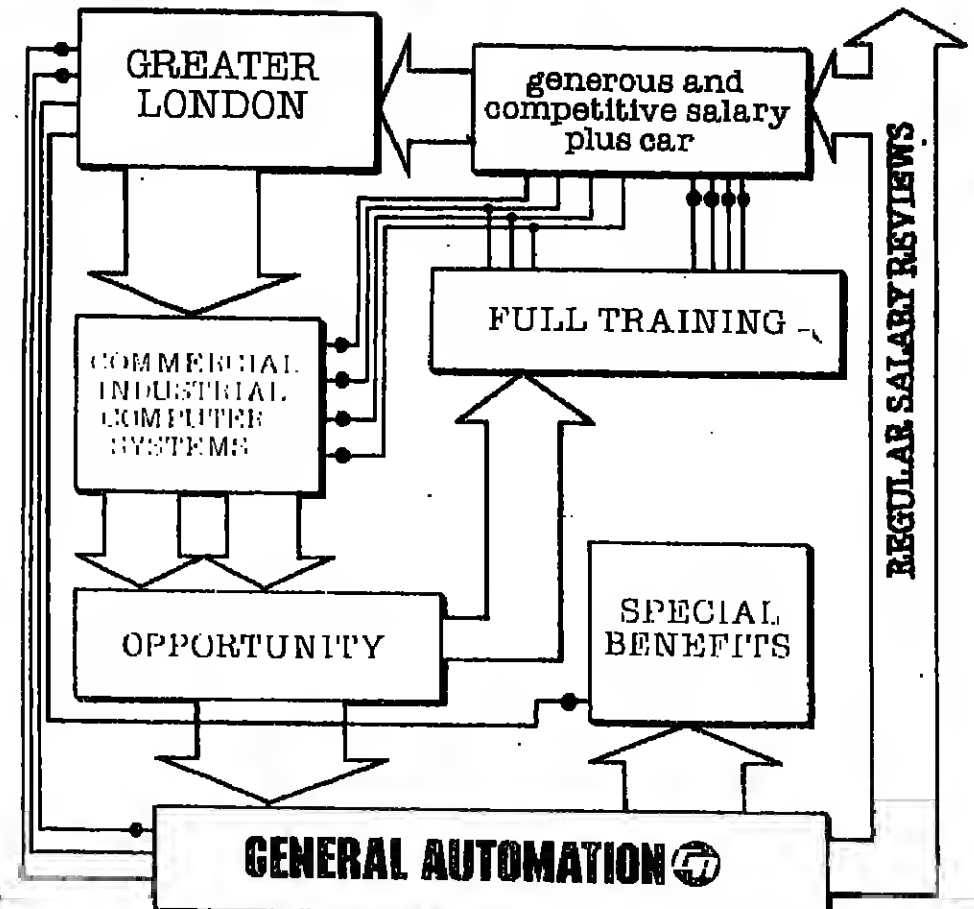

TRAINING: Full training will be provided at the company's European Training School on a regular basis.

FORWARD-LOOKING COMPANY: The company manufactures powerful mini and micro computers for industrial/commercial use. Their success has resulted in over 18,000 systems installed worldwide. Always at the forefront of technological advances, their activities are constantly highlighted in the International and Trade Press.

SPECIAL BENEFITS: Free BUPA, Free Life Assurance, Contributory Pension Scheme (5% of salary), 20 days' Holiday p.a.

For positive career advancement, contact Peter Gorton

SWITCH TO MICHELIN TAKE A GREAT TREAD FORWARD

OPERATIONS AND DATA PREP SUPERVISOR

MANAGEMENT SERVICES, DEPT. LONDON, S.W.3
Michelin, the world's leading radial tyre manufacturer, which is recruiting an Operations-Data Preparation Supervisor for our Computer Installation in our Commercial Head Office.

The work involves planning and scheduling operations and data preparation, staff work loads, preparation of operational instructions, job assembly and control, maintenance and up date of tape and disk library, training of data preparation Clerks/Computer Operators.

Sound training in computer operations/data preparation by a recognised manufacturer is essential.

Age range: 21-30 years of age, with a minimum of 2-3 years' experience of operating a small mainframe computer.

Michelin offers an individually negotiated salary to attract the calibre of Supervisor required, two weeks' paid holiday plus statutory holidays.

Free life assurance and contributory pension scheme.

Above all we offer a career associated with first-class products renowned for their quality, together with effective Personnel Policies.

Please write in confidence, giving full details of age, experience, qualifications and current salary to:

The Personnel Manager—Commerce (Ref. JFG - DPS 1/79)
MICHELIN TYRE CO. LTD.
61 Fulham Road, London SW3 5RD
or telephone 01-588 1460 for an application form.

1979 PLAN YOUR CAREER WITH PRESCOT ENGLAND, AUSTRALIA SOUTH AFRICA and NEW ZEALAND

£4,000 to £12,000

Careful planning often makes the difference between the successful and the not so successful computer career. Prescott Computers understand this because we specialise in overseas computer recruitment and the selection for an overseas post requires extra care by Prescott, employer and employee. We use the same principles of care whether UK only or overseas employment is involved.

We currently wish to interview Programmers, Systems Analysts, Analyst Programmers, Consultants and Sales People for a broad range of clients in England, Australia, New Zealand and South Africa. Salaries range from £4,000 to £12,000 p.a. If you are interested, why not telephone Chad Stolper on 01-242 2142 for an informal discussion.

Alternatively if you prefer write to him at:
Prescott Computers Limited,
6 Bloomsbury Square
London WC1A 2LP

Programming Team Leaders

£7,500

Everest Double Glazing, part of the RTZ Group, is a fast growing and profitable company leading the market for secondary windows, patio doors and conservatories.

The DP Department is now expanding its maintenance to meet the increased demand and the staff structure is being reorganised to match this rapid expansion. Three positions as Team Leader are being created and this provides excellent opportunities for career development for male/female computer personnel.

Applicants must be self starters with good, low level programming experience and the ability to motivate and control a small team of programmers. Knowledge of IBM Assemblers, together with experience of team leading on one or more major projects would be a distinct advantage.

A high starting salary is offered with a review after six months, and training in systems analysis for the right candidates. Also offered are four weeks' holiday, staff discounts and the opportunity to work in a pleasant location on the fringe of London just two minutes from Cuffley Station.

a member of
the RTZ Group

Please write, with brief details to Mr. D. King,
DP Manager, Everest Double Glazing, Limited,
Everest House, Cuffley, Potters Bar, Herts.

HODDERSDON (09524) 42121

DP Operations Manager

Sidcup c. £5,250

The pharmaceuticals wholesaling subsidiary of a large international trading group is seeking a responsible person to control their IBM System 34 installation in Sidcup, Kent. Currently there is an on-line order entry system allied to batch processing. An inactive system for a confirming house, a fellow subsidiary in the West End of London, is being developed.

The successful man or woman is likely to have had at least three years' experience of working in an IBM installation, preferably in a supervisory capacity. A working knowledge of RPG 11 and the ability to assist in system maintenance activities will be an added advantage.

The position offers the ambitious operations supervisor the opportunity to gain management experience and there are good possibilities for career development with this expanding group.

Please send concise details of your education and experience to:-

W. E. Harry,
Soltraco Limited, Excel House,
42 Upper Berkeley Street, London W1.

FERODO

SENIOR SYSTEMS ANALYSTS

THE COMPANY
Ferodo Limited is situated in the Peak District — an attractive rural area with relatively low cost housing within commuting distance of both Sheffield and Manchester. We are one of the country's leading manufacturers of friction materials and — following internal promotions and development of new projects — are currently seeking Senior Systems Analysts to join us at our Head Office.

OUR COMPUTER
Ferodo Limited is part of the Turner and Newall Group and is one of the unit companies using a centrally located IBM 370/168 running under OS/VS1 and using IMS. Some of our systems are still running on our locally based ICL 1902T but these are rapidly being transferred to the central IBM machine.

THE JOB
The successful applicants will be involved in new developments concerning Factory Loading, Progress Control, on-line Order Processing and Group Accounting Systems which will include an on-line Sales Ledger. Full training will be given where necessary.

THE APPLICANTS
The job calls for 2-3 years' experience and achievement in commercial systems analysis, design, development and implementation.

Educational requirements are qualifications at "A" level standard or equivalent and preferably a degree.

We offer Competitive Salaries according to experience and suitability and the benefits package includes membership of the excellent Turner and Newall pension scheme, free BUPA membership, four weeks' holiday, assistance with re-location expenses, etc.

We work a 37.5 hour week — 9.30 a.m. to 4.30 p.m.

To find out more about this job, telephone our Systems and Programming Manager, Brian Smith, on 020-881 2620, ext. 320, or alternatively, write for an application form to The Personnel Manager, John Crowe, Ferodo Ltd., Chapel-en-le-Frith, via Stockport SK12 6JP.

CMG is a rapidly expanding Computer Service Bureau with operating subsidiaries throughout the UK and Europe. We are seeking:

CUSTOMER ACCOUNT SUPERVISORS

£5000 — £8000

Sound business knowledge is essential as the work not only involves data control and supervising the quality of the business systems being processed, but also involves detailed liaison with our clients on the use and extension of computer systems within their organisations. All applicants must have practical experience of computer systems and a sound understanding of accounting principles.

Benefits include four weeks holiday and luncheon vouchers, non-contributory life assurance and BUPA schemes in addition to a profit sharing bonus.

These posts offer a wide variety of assignments and excellent career development. If you feel that you match up to our demanding yet highly rewarding standards, please write or telephone for an application form, quoting ref: W/3, to:

Head of Computer Operations

INTERNATIONAL BANK

LOCATION: City of London

SALARY: Circa £9,500 plus significant bank benefits

Our client is a very well known International Bank. They now wish to recruit someone to take complete charge of their Operations Department. Currently, the department is about 20 people strong and a major hardware upgrade is anticipated for the coming year. The department is already established but it is felt that it needs now to introduce a strong 'people and technical' manager.

We would therefore like to meet someone who has a record of management success in a computer environment. Ideally, the applicant will already be controlling an operations department, but could just as likely come from a systems and programming management position. However, the successful candidate must be able to supply positive leadership, enthusiasm and a proven ability to get things done on time.

The environment is a very time critical one, and to cope with this it is essential that existing standards are improved, and where they are lacking — provided. You must also be able to communicate effectively and relate to members of staff at all levels. A banking background would be considered an advantage, although this is not essential. Certainly, experience of working in a financial environment is desirable.

We are looking for someone who will quickly improve the performance of this department and will understand the necessity to be 'on call' at other than normal working hours when the situation so warrants. If you feel you have the dynamism and the ability to take this important challenge, we would like to hear from you. Please send a history of yourself to John Goldsmith.

SEMS

THOMSON-CSF

The following key positions are to be filled.

to £9,000 + car

A Support Specialist is required to provide essential technical support to the sales activity in the U.K. for SEMS products. Customers requirements will need to be analysed and defined to result in creative and professional proposals.

This position calls for sound experience in the industry, including mini involvement and a customer environment orientation, ideally gained with a computer manufacturer or a consultancy. Ref: 500/CW/Renée Nute.

to £9,000

The Software Support function will assume a strong technical involvement leading to the successful installation of basic software as well as implementation of customers systems. A deep technical background is essential, much of it gained in the mini computer field. Previous responsibility at an equivalent level would be ideal. Ref: 501/CW/Renée Nute.

£6,000-£7,000 + car

In addition to the vital Field service function to be established this leading engineer will take responsibility for the computer installation at SEMS new data centre.

A good customer engineering background, at product engineering level as well as field service experience in the mini computer industry is the requirement for this team founder.

Ref: 502/CW/Renée Nute.

All the above positions will offer team leading opportunities towards management for candidates with suitable personality, experience and ambitions. Exceptional candidates able to justify higher salary expectations than quoted above will be considered.

Product training on SEMS products will be given. The company will be based in the London area. Full conditions of employment will be offered including some relocation expenses if applicable.

Client interviews will probably start in London w.e.f. 19th January. Final interviews soon afterwards in PARIS.

Our offices will be open until 7.30 pm on 15th January for informal discussion.

UNIVERSITY OF LEICESTER

COMPUTER OPERATOR

The Computer Laboratory has a vacancy for an experienced computer operator. The Laboratory provides the central computing services for the University and associated Medical School using CDC Cyber 72 with a wide range of peripheral and a campus network based on PDP 11s. Knowledge of Control Data equipment would be a considerable advantage, but is not expected. Salary, according to age and experience on a range from £3,074 to £3,774 with an additional £217 a year two-shift allowance.

Applications should be made to: Mr J. O'Leary, Computing Laboratory, The University, Leicester LE1 7RH, telephone number 0533 59000, extension 47.

UNIVERSITY OF ABERDEEN

TEMPORARY PROGRAMMER

Applications are invited from suitably qualified persons for above post in Data Processing. The post is tenable for one year in the first instance, but may be extended.

An administrative/library computer (CTL 8050) has recently been installed and includes large disks, VDU's and light-pens. The initial applications areas will be library, finance and student records. A knowledge of COBOL is desirable.

Salary on Other Related Staff Scale 1B (£3,384-£5,694) with appropriate placing.

Further particulars from The Secretary, The University, Aberdeen, with whom applications (2 copies) should be lodged by February 2, 1979.

THE NEW YEAR AT AMERICAN EXPRESS COULD OFFER YOU A WIDENING OF YOUR CAREER HORIZON

The Card Division of American Express continues to expand its Computer Systems Group. They now have a requirement to recruit a number of staff to fill completely new vacancies. This is due to significant expansion of business and also a greater commitment to the development of computer systems that will improve the development of that business.

The positions advertised vary significantly in status and job content, and some form part of the International Systems Group. All positions offer excellent salaries and a large number offer a mortgage subsidy. There is a non-contributory life and pension scheme, plus a heavily subsidised staff restaurant. The working conditions are first-class, and being based in Brighton offers one of the most attractive locations in Southern England.

The vacancies fall into four main categories:

**Programmers
Systems Analysts
Research and Development Analysts
User Support Analyst**

Briefly set out below are the ideal 'person specifications.' However, if you feel that you have other experience that can be utilised in a positive, fast moving group that is gradually moving to the front both in terms of systems and technology, then we would like to hear from you. We suggest you do this either by contacting John Goldsmith at the address below, or at his home on Camberley 21266 at any reasonable time, or better still, send a short history of yourself so that an appointment can be made to meet you.

Programmers

We are looking for Programmers and Lead Programmers. Experience ideally will be in an IBM environment, with a strong COBOL or Assembler background. Experience should extend from 1 year to 5 years depending upon the level of position applied for. There are advantages in both positions; full training will be provided to keep you up-to-date technically; at the senior level, you will have the opportunity to either manage people or assist in the management of people. The career opportunity can later widen either into systems or into software. Ref. 2145/CW.

Systems Programmers Systems Software Specialists

Again these positions vary in status and depend entirely on the length of time and the responsibility that one has had in the area. We are looking for people with an Assembler background in an IBM environment with knowledge of OS/VS1. You also will have some of the following experience:

Performance monitoring, tuning evaluation and capacity planning. Software package evaluation in the fields of operations support, applications development and testing and productivity aids. If you have worked with ROSCOE, CICS/VS, DL/1, VSAM or VTAM, you are certainly someone we would like to know.

Again the career opportunity is a good one. An opportunity that can only be provided in a fast growing organisation such as American Express. Ref. 2146/CW.

Systems Analysts

We are looking for Analysts who have done things. Again, the length of experience and the responsibility achieved will decide your level of entry into American Express, but the opportunities are very good indeed. A number of major projects are at hand. There has been a significant 'look back' at systems already developed to bring them in line with the fast moving business of the Card Division, but an even greater 'look forward' to what is going to be required during the next few years. It is possible to use all the current 'buzz words' that are relevant to this kind of development, but perhaps it is enough to say that American Express are constantly becoming much more demanding of their systems group, so the pressure will be there, and this is something you must clearly understand. However, so is the opportunity. Ref. 2147/CW.

International Systems Group

The International Systems Group is responsible for the development of systems in many parts of Europe. Some of the positions advertised will require some European travel. Two major projects are currently to hand, one is a General Ledger project and the other is an International Accounts Payable project.

Lead Programmer

We are looking for someone with a strong Burroughs background. American Express are installing hardware in the Burroughs 1700 range in a number of European centres and they are looking for someone based in Brighton, to join them at a senior level within their programming group. Ideally, you should have between 2 and 3 years' experience and be capable of significant self-motivation and ability to work under pressure. Ref. 2148/CW.

Analysts

As previously mentioned, the systems developed in the International Systems Group are largely accounting based, therefore, we would like to meet Analysts who have experience of working in a financial systems environment. We hope that they can bring knowledge of the two systems mentioned and will probably find the international aspect of this systems development a very interesting challenge. We are looking for people at several different levels and you should have at least 2 years' experience of working in a systems environment that has got things done. Ref. 2149/CW.

User Support Analyst

This position, attached to the International Systems Group, is a very responsible and interesting one. It will require significant international travel in Europe. The job will be to write-up procedures for new systems, generally advise users of their responsibilities and ensure that adequate documentation is produced for new systems. Ref. 2150/CW.

Research and Development Analysts

The main responsibilities of the Research and Development Group will be to research and evaluate new hardware and to assess new technology and products and their impact on the Card Division's business objectives. This new group has responsibility for computer Research and Development not only in the United Kingdom but also for American Express' computer activities in Europe.

The main personal requirements are: a detailed knowledge of systems design, experience of current computer hardware and some programming experience. A data communications background would also be a significant advantage. The selected applicants will be expected to operate at a senior level and therefore will be able to negotiate confidently at all levels of management. Ref. 2151/CW.

RECRUITMENT
CONSULTANTS

JOHN GOLDSMITH (Computer Recruitment) Ltd.

GO WITH GAMMA IN '79

Gamma Associates is the leading supplier of DEC Computer Systems for commercial use in Europe. The Head Office is in Nottingham and there are other offices in the U.K. The company's continuing growth offers considerable scope for advancement and has given rise to the need for additional staff based in Nottingham.

ON-LINE SYSTEMS DEVELOPMENT STAFF

PROJECT LEADERS to c £7,500 + Benefits

- * To assume responsibility for the successful implementation of projects covering a wide variety of commercial applications.
- * To advise on costings and pre-sales proposals and to be responsible for producing Functional and systems Specifications.

ANALYSTS to c £6,000 + Benefits

- * To work on the design of on-line applications and to be responsible for producing systems and programming specifications.
- * To take responsibility for the system testing of completed applications prior to implementation.

PROGRAMMERS to c £5,000 + Benefits

- * To develop programs in an on-line environment to match program specifications.
- * To assist in the preparation of program designs as a basis for programming.

Commercial experience would form an essential part of the background of successful applicants and any previous involvement with on-line systems would be a distinct advantage.

Applicants should write or telephone for an application form to Mrs. Lynn Cox, Gamma Associates Ltd, Newland House, Mount Street, Nottingham. Telephone Nottingham (0602) 412788

SENIOR COMPUTER ENGINEERS

We would like to hear from top quality computer engineers with a minimum of two years experience on either LSI-11 (Q BUS) or 11 range (UNIBUS/MASSBUS) who wish to join a rapidly expanding organisation. Rewards are above average.

Basic to £7,500 p.a.

- * Company Car
- * Free BUPA membership
- * Pension Scheme

These positions will be based in the Nottingham area.

Applicants should either telephone Miss Claire Maxwell Nottingham (0602) 44376 or write to the Engineering Services Manager, Gamma Associates Ltd, 25 St. James's Street, Nottingham.

The pass card to 3000 potential employers

Here is a unique and efficient way of placing your name and abilities before many potential employers without leaving your attaché.

It won't involve you in inconvenient meetings, or under-cover phone calls. You won't be pushed by us. You won't be asked for any money.

Over 3,000 good employers, of all sizes in all industries, send us details of their personnel requirements. When you post this coupon below, we will send you an application form to be completed and returned with relevant details about yourself and those companies you don't want to put (which we guarantee to treat as confidential).

We match your skills and ambitions with your clients' needs. Only when we find one of them is looking for someone like you - only when we have checked again that you have not included them on your list of employers not to be contacted - will we tell them about you. Then the invitation to talk comes directly from that employer.

Post this coupon today.

APL Analyst/Programmer

Rank Xerox (UK) are looking for an Analyst/Programmer preferably with previous Programming experience to join the Timesharing Applications unit within the O.R. Group situated at Bridge House, Uxbridge.

The work involves development of major APL applications and providing full support to internal users.

We are interested in meeting people with either APL, Fortran or equivalent scientific programming experience backed up by proven mathematical ability and good communication skills in view of the amount of internal liaison involved. We would also consider a recent graduate in a numerate subject, ideally with some scientific or computer experience in which case full APL training will be given.

Salary level will vary according to age and experience but will be competitive and offered in conjunction with an attractive range of benefits and exceptional career prospects within a highly successful international organisation.

For further details please contact Denise Lincoln, Rank Xerox (UK) Ltd., Bridge House, Oxford Road, Uxbridge, Middlesex. Tel: Uxbridge 31131.

RANK XEROX

ANALYST / PROGRAMMERS

LONDON HOLLAND

to £6,500 A1 Neg.

Informatix has been retained by clients in the computer services industry to assist in the recruitment of permanent D.P. Staff. The main prerequisites are a minimum of 18 months' programming experience, some systems experience and education to HND or 'A' level standard. All companies offer excellent career prospects.

For the positions in London, applicants must be capable of developing commercial programs to fixed time scales in either COBOL on ICL/IBM Mainframes or in an On-Line environment on minicomputers.

For the positions in Holland, practical experience of Software/Hardware on minicomputers is required, preferably with some graphics experience, to provide comprehensive sales and marketing support.

SMR Sales & Marketing
Recruiters Ltd

Sales Executives

If you are seeking to advance your career rather than simply looking for another job then you need the objective guidance of an organisation which is totally conversant with all aspects of sales and marketing within the computer industry.

Although our activities are devoted to this area, we are not merely a recruitment organisation; we are the only company within the industry which also provides sales training, market research and product promotion.

We understand sales people because we have done the job ourselves for a total of over 45 years and we know where the best job opportunities are because we have access to all the significant computer companies.

So give us a call if you need help of any kind: we believe there is still room for optimism in business. Who knows, you might even get to speak with TRADER!

SOUTH CLOSE HORSFELL
WOKING SURREY (S4082) 20261

Mini/Micro Specialists

SALARY TO £8,000 +

Paramin (U.K.) Ltd is a newly formed subsidiary of an American Systems House, currently in the process of opening an office in Maidenhead, Berkshire. The company specialises in successfully challenging projects on both Minicomputers and Microprocessors. Examples of projects in which Paramin has been involved are as follows:

- 3270 Emulation on Intel 8080
- Messing Switch design and implementation on ICL 1500
- Software Diagnostics on hybrid microarray processor
- Software Diagnostics on Prime 300 for new target Mini
- Real-Time operating system design on Hewlett-Packard 1001 Series
- Real-Time system design of telephone exchange with VAX and LSI 11

Typically, the people who join Paramin are very professional, motivated not only by 'state-of-the-art' technology, but also by the development of the company, and, in this sense, should potentially possess a high degree of 'business-sense'.

If this type of environment appeals, send though the description is, call NIAL DUGGAN at the above number. We can then arrange for an informal meeting to discuss mutual interests.

The Polytechnic
of North London

PROGRAMMING

ASSISTANT

The Polytechnic is replacing its present computerised student registration system with one which will deal adequately with a constantly changing data base, provide outputs immediately related to the needs of its users and be based on sound principles of software design, implementation, documentation and maintenance. The system may form part of a more comprehensive data base for management information. A Research Fellow is currently drawing up proposals for this system.

A programming assistant is now needed to help with the completion of this proposal and work on its implementation. Full support will be available from the Registry, Computer Unit and computer services staff of the Polytechnic. The appointment will be a period of up to two years.

Salary on a scale up to £4689 (including London Allowance). Commencing salary according to qualifications and experience.

Applications should be made to the Head of the Computer Centre, Polytechnic of North London, Holloway Road, London N10 8GQ.

SYSTEMS PROGRAMMER ADMINISTRATIVE COMPUTE UNIT

For a new £1.2MBS '3270' IBM 3270 system to be installed in the Polytechnic, the work involved will be program conversion from a 1902A and development of new systems, including on-line audit checks. Starting salary will be in the range £4,911 to £5,200 per annum for qualifications and experience in a 24-hour system. For full details, contact the Data Processing Officer, Polytechnic of North London, Holloway Road, London N10 8GQ.

Application form from The Registrar, The University, PO Box 617, London EC1 6JF.

MYRIAD

PERSONNEL CONSULTANTS

Several outstanding opportunities exist for additional personnel consultants within the Myriad organisation.

Successful candidates will work within a fast moving environment and be responsible for challenging recruitment campaigns on behalf of major organisations covering a wide range of data processing issues.

Applicants should be under 35 and have a background in commercial programming or analysis coupled with good communications skills. keen to work on their own initiative, candidates should have the desire and ability to succeed within a company offering excellent career prospects.

The company offers excellent conditions of employment and the successful applicants can expect an initial salary of c. £7500 in the first year, rising to an estimated salary of £9000 to £10000 in the second year of operation.

If you feel you might be the person for whom we are looking please telephone to arrange a confidential meeting to discuss the matter in detail.

The Specialists in Computer Engineering Opportunities of ALL Disciplines

(Give us a call and prove us wrong)

Germany DM 55,000 – DM 80,000

Our Client, a successful and well established European based consultancy, is currently recruiting for a number of projects with initial renegotiable contract periods of between one and two years.

For all positions English is the working language, although some German ability could be useful.

Data Base Designers

This development project involves the design and development of new Data Base systems. Previous experience should include good internal knowledge and design and implementation of Data Base systems, such as TOTAL, DMS, IMS, IDS, ADABAS, etc., or involvement with related systems software.

Operating Systems Designers

A new Operating System is being developed for a large and sophisticated multi main-frame configuration with Data Base and Communications facilities. Design experience on large Operating Systems, eg. Exec B, G.III/IV, IBM OS, GCOS etc., would be very relevant, although experience on smaller systems in related areas would also be of interest.

Communications Systems

Communications software is also being developed in conjunction with the above project. Experience associated with Terminal Handling, Graphics Displays, Teleprinters, Message Switching/Handling, Networks, Data Communications, Concentrators etc., is required for this project. Experience on Vrien hardware would be useful for one particular project.

Airport Control Systems

This project involves the development of systems associated with Air Traffic Control, Cargo Handling and Reservation Systems based on large mainframe hardware with Data Base facilities. Analysts and Analyst Programmers are required for this project.

Applications Programmers

Several Programmers with Assembler and/or COBOL backgrounds are required for commercially orientated projects in Southern Germany. IBM 360/370 or similar type hardware experience is required. Start dates are likely to be during March 1979.

Northern Europe To around £16,000

Commercial Projects

Analyst Programmers and Programmers are also required by the above client for commercially orientated assignments. Experience should include Univac 1100 JCL plus FORTRAN and/or COBOL although FORTRAN and COBOL on other hardware will be considered.

To apply for these positions, or for further details, please contact Roger Allington on 01-242 9356 (day) or Berkhamsted (04427) 2299 (evenings or weekends) if more convenient.

Ref: 111/CW/RA

MYRIAD

BASILDON

PROGRAMMER

To £6250

This is an excellent opportunity to join a progressive O.P. department. Our client will shortly install the new IBM 9140 distributed processor which they will utilise both to front-end large 370 mainframes at a remote site and to process on-site at their Basildon headquarters.

We wish to appoint an experienced programmer who will play an important role in the further development of computing facilities for the organisation.

Candidates should offer sound COBOL programming experience, preferably gained in a manufacturing environment. Most important is the ability to function well without constant supervision and to have the potential to develop a successful career with a forward looking organisation.

SOFTWARE DEVELOPMENT/SUPPORT ON-LINE COMMUNICATIONS NETWORK

Our client, part of a large and diverse British manufacturing group and itself a very substantial company, is currently developing a new range of commercial systems for both their IBM 370/138 and a new on-line network of BPDP 11/70s.

To provide development and software support for the installation of the new network, the following professional programmers are urgently required:

Software Specialist salary to £15,000 pa

Candidates should possess extensive knowledge of DEC software comprising a minimum of 3 years in software, preferably on PDP 11M systems. The appointee will be supporting both the network system and the applications programming teams a wide range of responsibilities.

Assembler Programmers salary to £7,000 pa

The successful candidates will be working on the development of the communications network as preferred applicants will have an IBM 370/138 or MACRO-11 background. However, applicants with at least 2 years ASSEMBLER experience on other types of hardware will be considered, and if appointed will be given full DEC training.

A NEW CAREER IN SCOTLAND!

On February 1, 1979, a special recruitment feature highlighting career opportunities and job prospects in Scotland will be published.

To advertise in this important feature contact:

Owen Kelly on 061-872 4211
or
John Farrar on 01-261 8098

West Sussex County Council

Assistant Computer Programmer Post No. 192

or
Trainee Assistant Computer Programmer

Salary £1821-£2885

County Surveyor's Department

The post is one of three providing computing support to Engineers and Technicians in the Transportation Studies Group. Extensive computing facilities are available, and these will be substantially improved during 1979.

Candidates should hold an appropriate degree or other computing qualification and have experience of Fortran and IBM/OS.

If you are qualified to "A" level, then we would consider appointing you as a Junior Trainee on the lower scale with opportunities for academic training in computing.

For further details about the job telephone Roger Jones on extension 585. Starting salary will be dependent upon qualifications and experience. Excellent removal, resettlement and lodging allowances are payable in approved cases, and there is also the possibility of temporary accommodation.

Application forms from County Surveyor, County Hall, Chichester, or telephone Chichester 798100. Ext. 413/458. Closing date for applications 29th January, 1979.

HOWARD

PROGRAMMERS
£24,000 P.A.

We require several programmers with experience of CORAL 68, RTL 2, PL/1 and/or MACRO 11 on PDP 11's to work on an interesting overseas contract. This involvement is the software design, coding, implementation and debugging, prior to formal QA, of modules within a large suite of programs. A working knowledge of RSX 11M and X26 protocol would be a definite advantage. The project is operated on a team oriented basis and for the right person can represent involvement into late 1980. Tel: 01833 4068. Telephone now for further details.

MINI MICRO
HOLLAND

CONSULTANTS & PROGRAMMERS
FOR A NEW ALLOY

Would you like to join a creative team of Mini Computer Specialists working on Distributed Processing Systems within a business environment? The actual hardware is a Honeywell 100. The hardware direct experience of others is of minimal importance. Successful candidates will have substantial experience in Mini Computers, preferably with a minimum of four years in the field. The project is a real time environment. The project is operated on a team oriented basis and for the right person can represent involvement into late 1980. Tel: 01833 4068. Telephone now for further details.

The Dutch subsidiary of a world renowned international group, specializing in Mini and Micro based systems including Communications, Message Switching, Process Control and Network Topology, is seeking experienced and motivated individuals to join its team. The project is a real time environment. The project is operated on a team oriented basis and for the right person can represent involvement into late 1980. Tel: 01833 4068. Telephone now for further details.

Operators: Contract/Salaried! Top Rates! UK & Overseas!

Immediate contracts:
System 4, 1900 George 2 & 3, 2900

Our requirements for top-class Operators are continuously expanding, throughout the UK and abroad.

As Europe's leading software house we regard all these things as important:

- paying top rates
- providing real job satisfaction
- offering good career prospects.

Shifileaders and Operators with at least 2½ years experience should contact Andy Woodham or Graham Whitaker on Reading (0734) 581258 extension 36 or 46, reversing the charges. Or write to Andy Woodham, Operations Services, ICL Datasilk, Reading Bridge House, Reading, Berkshire RG1 8PN, quoting reference CW1178.

ICL Datasilk

The Computer Professionals

A New Year - A New Challenge

This is your opportunity to join one of the world's most advanced computer centres.

Purpose built and costing many millions it has the most varied equipment you are likely to find anywhere.

The transfer of the remaining IBM Mainframes within the Company has been completed to schedule and as a result of this and the continuing growth of the centre we are now looking for additional:

Senior Computer Operators
Master Terminal Operators

Our equipment consists of 1 x 3031, 2 x 370/158 and 2 x 370/145, so you will need experience in at least two of the following areas: VM, DOS/VS, VSI, HSP/M, MVS, TSO, IMS or CICS. But equally important you should have a genuine interest in computing as a career.

Benefits are those associated with a major company and include 5 weeks' holiday, pension, life assurance and sick pay schemes, substantial discount on ICL cars and necessities. Generous relocation assistance will also be provided to this pleasant, rural area, where housing is favourably priced.

So, if you're looking to be part of a successful team, make your New Year resolution now. Ring Rod Watts on (0527) 28515 or if you prefer write for an application form to:

UNIVERSITY OF THE
WITWATERSBURG,
JOHANNESBURG
DEPARTMENT OF APPLIED
MATHEMATICS

SENIOR LECTURER/
LECTURER IN THE
DIVISION OF
COMPUTER SCIENCE

Applications are invited from persons with a degree in one of the following areas: Data Base Theory and Design, Design and Analysis of Algorithms, Numerical Analysis and Software Systems. Appointments will be expected in each, update and design courses at undergraduate and post graduate level and to participate in research activities.

Applicants should have a masters or doctorate degree and experience in computer science lecturing and research although both these conditions may be waived if the applicant is in possession of equivalent professional qualifications.

The salary and level of appointment will be determined in accordance with qualifications and experience. Salary scales will be reviewed in April 1979 but the following ranges can be taken as guidelines.

Senior Lecturer: £10 144-£13 489 per annum
Lecturer: £7 954 - £11 807 per annum

The University's policy is that its appointments are made on the basis of the selection of the best person for the job. The selection process is based on the merits of the candidates and is not influenced by the status of the candidates. The University is a fully funded institution and is not subject to the financial constraints of other institutions. The University is a fully funded institution and is not subject to the financial constraints of other institutions.

O & M OFFICER

£8012-10218

Applicants should be qualified to carry out the duties of an O & M Officer in the following areas: (a) maintenance of equipment, (b) repair of equipment, (c) replacement of components, (d) calibration of equipment, (e) testing of equipment, (f) documentation of equipment, (g) training of staff, (h) supervision of staff, (i) management of equipment, (j) safety of equipment, (k) security of equipment, (l) environmental control of equipment, (m) waste disposal of equipment, (n) recycling of equipment, (o) disposal of equipment, (p) storage of equipment, (q) transport of equipment, (r) installation of equipment, (s) removal of equipment, (t) repair of equipment, (u) replacement of components, (v) calibration of equipment, (w) testing of equipment, (x) documentation of equipment, (y) RECRUITMENT CONSULTANTS

In 1978 Effectia Gravis once again confirmed
its position as one of the largest, most re-
spected computer personnel consultancies in
the U.K.

Business was up from the previous year by over
50% and our aim for 1979 is to maintain this
growth rate.

To achieve this, we need more consultants,
with the following attributes: common sense,
the ability to communicate on all levels, and
the will to succeed.

Anglian Water Authority DATA BASE PROJECT LEADER

Ref. H30010
£7,778-£8,362 including supplement of £312

The Authority is implementing a computer service to
support financial and scientific systems. The service is
based on a central mainframe computer with data com-
munications links to divisional offices.

A Project Leader is required to be responsible for the design
and administration of the data base required to support the
Authority's application systems.

Applicants should have experience in the following areas:

- * Data Analysis
- * Logical data base design
- * Physical data base design (preferably using CODASYL
DBMS)
- * Data base performance monitoring
- * Project management

The Authority offers excellent conditions of service and
generous removal expenses if relocation is necessary.

If you are interested or want to know more about this
opportunity why not call Jenny Spencer at Huntingdon
(0480) 80181 Ext. 370 for information and an applica-
tion form.

The closing date for applications is 26th January, 1979,
and should be sent to:

ANGLIAN WATER AUTHORITY
Diploma House, Grammar School Walk
Huntingdon, Cambs.

Northern Regional Health Authority Computer Programmer

Applications are invited for the post of computer
programmer in the Authority's Statistical Section. The
successful man or woman will join a small team working
on a variety of applications in the statistical operational
research and clinical research fields.

Candidates should have a graduate or equivalent status and
must have passed a course with a substantial
mathematical or statistical content. Practical experience of
programming for ICL computers, and of the George III
operating system would be an advantage, but is not
essential as training will be given.

Salary scale: £3452-£4421 p.a. (flow payments to the
N.H.S. will normally constitute 10% of the minimum of the
scale).

Applications form and job description available from
the Regional Personnel Officer, Northern Regional
Health Authority, Bonfield Road, Welkegate,
Newcastle upon Tyne, NE5 4PY, to whom completed
applications should be sent by 28th January 1979.

COVENTRY CITY COUNCIL

Operations Controller

Salary up to £8702

THE JOB To plan, control and motivate the activities of
all staff in the Operations Section with particular attention
to day-to-day matters.

THE INSTALLATION A large ICL System 4/72 on 3
shifts, due for replacement between 1980 and 1982. Data
preparation by a dual processor key to disc system with 24
key stations on 2 shifts.

RESPONSIBLE FOR about 60 full-time and 30
part-time staff working a variety of shift arrangements in
operating, data preparation and control.

RESPONSIBLE TO the Operations Manager who will
be devoting the majority of his time to the equipment
replacement study over the next year.

EXPERIENCE REQUIRED It is unlikely that anyone
with less than 5 years in computing would have the
experience and maturity sought. However, this experience
could have been gained in any or several of the relevant
areas. Considerable supervisory experience is necessary,
either in one such area in a large organisation or as
manager in a smaller one. Systems or programming would
be considered as relevant.

CONDITIONS OF SERVICE At least 28 days' annual
leave plus 12 fixed days. Staff canteen, sports facilities,
local government sick pay and superannuation. No shift
working is required but some out of hours involvement is
inevitable.

SALARY Starting salary in range £5727-£8342
according to experience, progression possible to £8702. A
conditional grant of up to £550 may be available towards
legal and removal expenses.

INFORMATION? Please write to Mike Rowe,
Operations Manager, Computer Division, Council
House, Earl Street, Coventry CV1 5RQ, or telephone
him on 0203 28558, Ext. 2723 (outside office hours
ring 0203 28711) for further details and application
form.

Closing date for completed application form is 26th
January, 1979.

coventry

UNITED KINGDOM ATOMIC ENERGY AUTHORITY Computer Operators at Harwell

We have vacancies for operators to work on the
Central IBM 370-168 installation (soon to be
replaced by an IBM 3033) at Harwell, providing
opportunities to take part in utilising one of the
world's largest computing complexes.

Applicants with previous operating experience
of IBM computers will have an advantage, but full
training will be given to successful candidates.

Starting salary depends on age and
experience, with appointments being made in the
Data Processor or Senior Data Processor grades.
Promotion to Senior Data Processor is often
obtainable within 12 months. Operators must all be
available for shift working. With shift supplement,
the annual salary range for Data Processors is from
£2,805 to £3,278 and for Senior Data Processors
from £3,942 to £4,333.

For further details and application form, please
contact: Mrs. H. A. Stevens, Personnel Department
'B', AERE, Harwell, Oxon OX11 0RA.
Telephone: Abingdon (0235) 24141, Ext. 2946.

HARWELL

Potential Sales Executives

Circa £7,000 + Car

For the NORTH and SOUTH to be trained to market their Data
Communications Equipment. Ideally we are looking for young men
or women with relevant job experience who feel that their
development is in sales. The right person will be able to sell
their product in sales.

+ Sales Engineer

(Worldwide) C. £10,000 + Car

to market one of its latest developments in the telecommunication
field. The right man or woman will probably have a technical/
engineering background in the telecommunication industry and must be
willing to travel extensively. Experience of overseas selling would be
advantageous, though full training will be given.

CASE is a young energetic company specialising in the manufacture of
data communications systems. The company's products include
multiplexers, concentrators, modems and message switching
systems. Continuing expansion provides an opportunity
to join an enthusiastic informal group in a job
where salaries, conditions of service
and career opportunities
are excellent.

UNIVERSITY OF WARWICK DATA PROCESSING OFFICER

Applications are invited for the
post of Data Processing Officer in
the University Central Adminis-
tration, renewable as soon as pos-
sible. Salary will be in the Grade II
scale £8,317-£7,764 p.a. (under
review). Further particulars may
be obtained from the Secretary
and Registrar, University of War-
wick, Coventry, CV4 7AL. Ap-
plication form and application (in-
formal) naming three referees
should be sent by 18th January
1979. Please quote Ref. No. 201/B
78.

Puzzle Answer

THE smallest prime-sum
for ten different digits is
587, using either
2+3+5+6+8+9+401, or
2+5+7+61+83+408.

Principal Scientific Officer

The Research & Development Division of
the British Railways Board at Derby
has a vacancy for a Principal Scientific
Officer in the Transport Technology
Assessment Group. The group
undertakes wide-ranging studies to
reveal the opportunity for technological
advances in the various rail businesses.
To aid in the evaluation of emerging
proposals we are seeking an experienced
individual with professional
qualifications or relevant degree to join
a small team engaged in developing
transportation systems assessment
methods.

The work requires expertise in
computing (Fortran) and transportation
modelling, with a working knowledge of
the statistical, econometric and
simulation techniques involved.

The person appointed will be expected
to initiate and develop analytical meth-
ods and also to undertake systems syn-
thesis studies of innovative approaches.

The commencing salary will be within
the range £5774 to £6554. There is a
contributory pension scheme and the
transfer of existing pension rights can,
in most cases, be accepted. There are
also free and reduced rate rail travel
facilities.

Applications stating age, education,
qualifications and experience should be
sent to:-

Headquarters Staff &
Services Manager,
British Railways Board,
222 Marylebone Road,
London NW1 6JJ,
quoting reference
R8263.

Computer Programmers

c. £6,500 Herts

Everest Double Glazing, a member of the RTZ
Group, are manufacturers and distributors of
high quality double glazing products with
branches throughout England.

Currently our OP section is expanding its
mainframe and consequently Programmers are
required to assist in the development of new
systems and the maintenance of existing
systems.

Men or women, with at least two years' RPG
experience, are sought. Applicants should be
self-starters, able to work hard and assimilate
new data quickly.

As well as a good starting salary, career
prospects within the Group are excellent.

Please write with brief details to M.D. Kings, DP
Manager, Everest Double Glazing Limited,
Everest House, Colley, Potters Bar, Herts.
